

1970 Cadillac

DATA BOOK

1970 CADILLAC DATA BOOK

"Craftsmanship a creed . . . accuracy a law" was as much in evidence when the first Cadillac motor car came off the assembly line in 1902 as it is today, almost seven decades later. The Cadillac craftsman's incessant demand for precision manufacturing helped Cadillac achieve universal recognition as the Standard of the World. That same unremitting effort for product excellence has made the 1970 Cadillac a triumph of motor-ing distinction. It is a genuine compliment to the Cadillac craftsman and his strict adherence to building the world's finest motor car. As this edition of the Cadillac Data Book so vividly portrays, this magnificent new Cadillac, with its traditional evidence of unmatched luxury and quality, can help make 1970 a most pleasing year for your customers and a truly rewarding one for you.

SECTION CONTENTS

- A COLORS AND EQUIPMENT** Names and code numbers of each body style, exterior color and interior trim with recommended color combinations, and a listing of standard and optional equipment and equipment groups.
- B BODY STYLES AND INTERIORS** Exterior and interior illustrations of each body style plus details of interior upholstery and trim.
- C OPTIONAL EQUIPMENT** Cadillac's outstanding variety of available conveniences is explained to help each owner individualize his Cadillac for more motoring pleasure.
- D SPECIAL ORDERS** Cadillac provides still further a way to personalize each car to individual preferences with its attractive selection of custom interior and/or exterior colors. There is an explanation of each special order option plus general ordering procedures.
- E NEW FEATURES** Cadillac's impressive array of 1970 advancements are illustrated and explained in detail.
- F ENGINEERING FEATURES** Significant components of the two 1970 engines, transmission, chassis and body are illustrated and explained. Engineering features that pertain exclusively to the Eldorado are illustrated and explained separately.
- G SPECIFICATIONS AND MILESTONES** Detailed specifications of the 1970 Cadillac followed by a yearly "milestones" section pointing up the development of the Cadillac motor car as it earned universal recognition as the Standard of the World.
- H PRICES** The Manufacturer's Suggested Retail Prices for each Cadillac model, each Equipment Group, each Optional Equipment item and for Special Order colors, upholstery and equipment.

COLORS AND EQUIPMENT

ENGINE BLOCK INSPECTION

One of the finest precision jobs in a Cadillac is the fit of the pistons inside the cylinder bores. A workman uses a scientific gauge that registers the measurement of each cylinder bore in the block, an operation that takes about one minute. There are ten different sizes and the difference between the smallest and largest diameter is an infinitesimal .0002 (two-ten-thousandths) of an inch. During engine assembly, pistons that have also been measured and sized within this same range of tolerance are selected to mate perfectly with the cylinder bores.

1970 CADILLAC COLOR-TRIM RECOMMENDATIONS

(See Pages A-3 and A-4 plus Color and Upholstery Selection Books)

Elegant Interiors

Cadillac interiors are distinguished for their elegant fabric patterns and rich leather textures in a variety of exquisite colors. The colors are carefully selected to harmonize with their counterpart exterior colors, thereby giving customers a fully color-coordinated interior and exterior combination. The upholstery recommendations on the color and trim charts are designed for complete assurance of interior and exterior color compatibility. All recommendations are based upon Cadillac's professional experience and are therefore a part of their long-time quality standards.

Combinations other than the ones recommended on the color and trim charts may be regarded as completely compatible by some customers and, of course, may be ordered. When a customer selects a combination not among those recommended on the charts, the order should be marked "color trim sure." This will confirm the accuracy of the colors as ordered.

Luxurious Exteriors

The acrylic lacquer of Cadillac colors, baked on and polished to a satin-smooth sheen, gives a rich, lustrous finish long after the car has left the showroom. For 1970, Cadillac offers a total of 21 exterior colors, 15 of which are completely new. There are seven strikingly impressive Firemist colors available, optional at extra charge on all body styles, which customers may choose for added richness of appearance.

Two-Tone Colors Not Available

A two-tone paint treatment is not available since Cadillac body styling does not provide a designed separation point for colors between upper and lower panels. Cadillac stylists feel that if a two-tone appearance is desired, it can best be obtained by ordering a Vinyl Top in a complementary color on certain body styles. Vinyl Top colors and recommendations are found on Page A-2.

Color Samples

The exterior color samples in this book are accurate reproductions of master metal panels. In making these color samples, acetate is used to add depth and richness to simulate as closely as possible the color as seen on the car's surface. Accurate viewing of the color is achieved by looking straight down at the color samples.

Special Colors

(See Special Order Section)

Past model colors or non-standard shades may be desired by some customers and, of course, may be obtained on a special order basis. Simply mark 00 in the COLOR space on the order form to denote a non-current optional color. In addition, indicate color name and reference in the SPECIAL EXTERIOR COLOR space, e.g., 1966 Antique Gold; 1964 Lime. Allow 4 to 5 weeks for shipment of the car when a special color is ordered.

1970 CADILLAC EQUIPMENT INFORMATION

Groups

The more popular Cadillac options that make everyday motoring more convenient and enjoyable are placed in groups. Each group of options is factory-installed, saving the customer time. In addition, placing items in groups greatly simplifies the ordering process.

Group Restrictions

Group 1 should not be ordered for the Seventy-Five Sedan and Limousine. The AM-FM Stereo Signal Seeking Radio included in Group 1 is not available on the Seventy-Five models. Group 4 should be ordered only for the Seventy-Five Sedan and Limousine. The Rear Control AM-FM Signal Seeking Radio included in Group 4 is available only on the Seventy-Five body styles.

If All Group Equipment Not Ordered

When any options in a group are not ordered, inform the customer of the items not ordered. This will call attention to items the customer may have intended to order but overlooked.

Cruise Control

The Cruise Control system available on all models for 1970 is vacuum operated by an OFF-ON switch on the instrument panel and a push button control in the end of the turn signal lever. This system is identical to the one offered on the Eldorado last year.

Dual Comfort Front Seat

The Dual Comfort Front Seat with individual driver and passenger controls is standard on the Brougham and optional at extra charge on the Sixty Special and all

De Ville models except Sedan de Ville. The driver's side is 2-way power operated while the passenger's side is 2-way manually operated. A 6-way power seat adjuster is available at extra charge for the driver. It is also available for the passenger side if the 6-way power adjuster is ordered for the driver.

California Evaporative Emission Control System

This system is available only on cars destined for initial registration in California. It is also mandatory on California cars. Be sure to specify Code R on such orders.

Radio Antenna

The Radio Antenna is sealed inside the windshield and comes on all cars even though a radio system might not be ordered.

Rear Window De-Fogger

The Rear Window De-Fogger is available on all models including the De Ville Convertible. It is standard on the Fleetwood Sedan and Limousine as part of the rear A/C system and optional at extra charge on all other models.

Seat Belts and Shoulder Belts

Six seat belts with pushbutton buckles, 3 front and 3 rear, are standard on all models with the exception that, on the Eldorado, five are standard with bucket seats. Shoulder belts with pushbutton buckles for the driver and right front seat passenger are standard on all models with the exception that, on the Convertible, they are optional at extra charge. Shoulder belts for the left and right rear seat passengers are available on all models, including the Convertible, at extra charge.

CADILLAC UPHOLSTERY OPTIONS

Calais Expanded Vinyl Options

Two all-vinyl interiors—Black and Med. Beige—are offered at extra charge in the two Calais body styles. Expanded vinyl is an extra thick-coated fabric with a soft resilient feel attained by sandwiching a sponge-like cellular structure between the backing fabric and plastic top-coating.

Calais Cloth Options

Dorian cloth, in combination with expanded vinyl, is available in six color options.

De Ville Cloth Options

Dubonnet and Dynasty cloth, together with Sierra grain leather, are available in seven color options in De Ville closed cars.

Eldorado Cloth Options

Duplex cloth, in combination with expanded vinyl, is available in seven color options.

Sixty Special and Brougham Cloth Options

Upholstery in the Sixty Special and Brougham is available in Dumbarton cloth with leather in four colors or all Divan cloth in four colors. The Dual Comfort Front Seat, standard for the Brougham, may be ordered in these same cloth options for the Sixty Special.

"75" Sedan and Limousine Cloth Options

Upholstery selections for the Sedan and Limousine include Dumbarton cloth with leather, all Decordo cloth and all Divan cloth.

De Ville Convertible Leather Options

The bench seat leather options are available in ten colors at no extra charge. The Dual Comfort Front Seat is available at extra charge in the same leather options.

CADILLAC UPHOLSTERY OPTIONS

De Ville Closed Car Leather Options

Nine leather options for the Coupe de Ville and eight for the Hardtop Sedan de Ville are available at extra charge in either the bench seat or Dual Comfort Front Seat. In the Sedan de Ville, six leather options are available at extra charge in bench seat styling only.

Eldorado Leather Options

Eight leather upholstery selections are available at extra charge in the Eldorado. One of these, Black, is available with Bucket Seats at extra charge.

Sixty Special and Brougham Leather Options

Seven leather options are available at extra charge in the Sixty Special and Brougham. The Dual Comfort Front Seat, standard on the Brougham, may be ordered in these same leather options for the Sixty Special.

Large Upholstery Book

Due to the limited size of the Data Book, upholstery samples are small. Therefore, it may be necessary to refer to the large upholstery book in which a larger sample of each pattern is shown for a better view of upholstery samples.

Bucket Seats and Dual Comfort Front Seat

The Eldorado leather upholstery number suffixed with a "B" is available at extra charge with Bucket Seats. All upholstery numbers suffixed with an "S" are available at extra charge with the Dual Comfort Front Seat with the exception that, in the Brougham, the Dual Comfort Front Seat is standard.

CALAIS COUPE UPHOLSTERY AND SEAT STYLING

UPHOLSTERY STYLING. The Calais Coupe interior is an attractive blend of Dorian cloth inserts and softly textured vinyl. Dorian cloth has a smooth satin finish with decorative bands of Acanthus leaves woven into the fabric and is available in six colors. An unusual effect is created by the use of Madrid grain vinyl stitching down the center of the seat back and cushion.

Two smartly tailored all-vinyl upholsteries in Black and Ant. Med. Beige are optional at extra charge and are styled with Madrid grain vinyl stitching. Additional vinyl colors are available on special request. See the Special Order and Price sections.

SEAT STYLING. The Notch-back bench front seat with individual seatbacks and folding center armrest is standard. Individual seatbacks latch securely in place to prevent them from tilting forward. Depressing the release button on the seat side panel unlocks the seat back. (With Power Door Locks, opening either door will automatically release both seat back locks.)

STANDARD AND OPTIONAL EQUIPMENT. See Equipment Charts on Pages A-9, A-10, and A-11.

CALAIS HARDTOP SEDAN UPHOLSTERY AND SEAT STYLING

UPHOLSTERY STYLING. The Calais Hardtop Sedan interior is also an attractive combination of Dorian cloth inserts and supple vinyl. Dorian cloth has a smooth finish with decorative bands of Acanthus leaves woven into the fabric and is available in six colors. An unusual effect is created by the use of Madrid grain vinyl stitching down the center of the seat back and cushion.

Two finely tailored all-vinyl upholsteries in Black and Ant. Med. Beige are optional at extra charge and have Madrid grain vinyl stitching. Additional vinyl colors are available on special request. See the Special Order and Price sections.

SEAT STYLING. A bench front seat with straight-across, stationary seat back, functionally styled assist strap and folding center armrest is standard on the Hardtop Sedan.

STANDARD AND OPTIONAL EQUIPMENT. See Equipment Charts on Pages A-9, A-10, and A-11.

DE VILLE CONVERTIBLE UPHOLSTERY AND SEAT STYLING

UPHOLSTERY STYLING. De Ville Convertible interior selections are richly tailored of exquisitely soft Sierra grain leather in ten color options. The seat back features horizontal pillow and button styling with a horizontal pillow appearance created for the seat cushion through the use of fine stitching.

SEAT STYLING. A notch-back bench front seat with individual backrests, functionally styled assist straps and free-standing center armrest is standard. A Dual Comfort Front Seat with individual backrests and free-standing center armrest is available at extra charge. With either seat style, individual backrests latch securely in place until the release button on the seat side panel is depressed. (With Power Door Locks, opening either door will automatically release both seat back locks.)

ADDITIONAL LEATHER COLORS AND TWO-TONE COLORS. If a prospective buyer should inquire about a color not listed on the chart or want a two-tone leather, refer to the Special Order and Price sections.

TOP COLORS. Code: 1. White 2. Black 3. Dark Blue
4. Dk. Bayberry 6. Lt. Beige.

LINER COLORS. Liner colors cannot be changed since the top material is a fusion of vinyl, fabric, rubber and drill cloth.

Code: 1. Black 2. Black 3. Dark Blue 4. Med. Gold
6. Med. Beige

TOP BOOT. The vinyl-coated boot is color-keyed to the upholstery and fits easily into place for a neat, tailored appearance.

STANDARD AND OPTIONAL EQUIPMENT. See Equipment Charts on Pages A-9, A-10, and A-11.

COUPE DE VILLE UPHOLSTERY AND SEAT STYLING

UPHOLSTERY STYLING. On the Coupe de Ville, pleasing Dynasty or Dubonnet cloth inserts with leather bolsters or, optional at extra charge, beautifully rugged Sierra grain leather are the selections available. Dynasty cloth is a richly textured fabric with an ornate design in three colors. Dubonnet cloth is a finely striped knit fabric in four colors. Sierra grain leather comes in nine beautiful colors. All selections are styled in horizontal pillow and button style for the seat back with a horizontal pillow appearance created for the seat cushion through the use of fine stitching.

SEAT STYLING. A Notch-back bench front seat with separate backrests and folding center armrest together with rear seat center armrest is standard. A Dual Comfort Front Seat with individual backrests and folding center armrest is optional at extra charge. With either style, each front backrest stays securely latched until released by a pushbutton located on the seat side panel. (With Power Door Locks, the release button is on the back of the seat back.) Functionally styled assist straps are placed on the back of each backrest.

ADDITIONAL LEATHER COLORS. Leather upholstery may be ordered in colors other than the ones listed on the chart. See the Special Order and Price Sections.

VINYL TOP. A vinyl top is an extra charge option that is becoming increasingly popular among Cadillac owners as it provides a neat two-tone appearance for added distinction.

VINYL TOP COLORS. Code: 1. White 2. Black 3. Dark Blue 4. Dk. Bayberry 5. Dk. Brown 6. Lt. Beige 7. Dk. Mauve.

HARDTOP SEDAN DE VILLE UPHOLSTERY AND SEAT STYLING

UPHOLSTERY STYLING. On the Hardtop Sedan de Ville, rich Dynasty or Dubonnet cloth inserts with leather bolsters or, optional at extra charge, beautifully rugged Sierra grain leather are the selections available. Dynasty cloth is a richly textured fabric with an ornate design in three colors. Dubonnet cloth is a finely striped knit fabric in four colors. Sierra grain leather comes in eight beautiful colors. All selections are styled in horizontal pillow and button style for the seat back with a horizontal pillow appearance created for the seat cushion through the use of fine stitching.

SEAT STYLING. With a combination cloth and leather upholstery selection, seats are the bench type with straight-across backrest and folding center armrest front and rear. With a leather upholstery selection, Notch-back seat styling with stationary front seat backs is provided. Functionally styled assist straps are placed on back of each seat back. A Dual Comfort Front Seat with armrest is available at extra charge in either cloth or leather upholstery styling.

ADDITIONAL LEATHER COLORS. Leather upholstery may be ordered in colors other than the ones listed on the chart. See the Special Order and Price sections.

VINYL TOP. A vinyl top provides a dramatic two-tone appearance and is an extra charge option many Cadillac owners find ideal as an expression of personal taste.

VINYLTOP COLORS. Code: 1. White 2. Black 3. Dark Blue 4. Dk. Bayberry 5. Dk. Brown 6. Lt. Beige 7. Dk. Mauve.

ELDORADO UPHOLSTERY AND SEAT STYLING

UPHOLSTERY STYLING. On the Eldorado, beautiful Duplex cloth inserts with expanded vinyl bolsters or, optional at extra charge, distinctive Sierra grain leather are the selections available. Duplex cloth is a sporty knit weave in 2-inch pleats running the full height of the seat back and full depth of the seat cushion and is available in seven colors. A stitched vinyl strap across the upper seat back adds an unusual but striking effect. Sierra grain leather is styled in this same manner and is offered in eight colors.

SEAT STYLING. The Strato-bench seat with individual seat backs and folding center armrest is standard on the Eldorado. Individual seat backs latch securely in place until the release button on the seat panel is depressed. Strato-bucket seats in Black leather with attractive center console are available at extra charge.

ADDITIONAL LEATHER COLORS. Leather upholstery may be ordered in several colors other than the ones listed on the chart. See the Special Order and Price sections.

VINYLTOP. A meticulously crafted vinyl top with center seam is an extra charge option that gives the discerning Eldorado owner an excellent opportunity to further enhance the exclusiveness of the Eldorado. Padded to further isolate sound from the interior, the vinyl top provides a dramatic two-tone appearance.

VINYLTOP COLORS. Code: 1. White 2. Black 3. Dark Blue 4. Dk. Bayberry 5. Dk. Brown 6. Lt. Beige 7. Dk. Mauve

STANDARD AND OPTIONAL EQUIPMENT. See Equipment Charts on Pages A-9, A-10 and A-11.

SEVENTY-FIVE SEDAN UPHOLSTERY AND SEAT STYLING

UPHOLSTERY STYLING. All Divan cloth upholstery, fashioned in horizontal pillow and button style, highlights the Fleetwood Seventy-Five Sedan interior. Dumbarton cloth inserts with leather or all Decordo cloth is available in this same trim style. Dumbarton is an ornate Matelasse fabric that is exceptionally rich looking and is available in three colors. Divan cloth features a delicate texture and extremely smooth hand and comes in Black only. Decordo cloth has a narrow ribbed design and is available in Med. Gray.

SEAT STYLING. The bench type seat with straight-across backrest and folding center armrest front and rear is standard.

AUXILIARY SEATS. Two auxiliary seats provide extra rear compartment seating space when needed. They fold against the rear of the front seat back when not in use.

VINYL TOP. A padded vinyl top is an extra charge option that lends a distinctive two-tone appearance to the Sedan and further isolates sound from the interior.

VINYL TOP COLORS. Code: 1. White 2. Black 3. Dark Blue 4. Dk. Bayberry 5. Dk. Brown 6. Lt. Beige 7. Dk. Mauve.

SEVENTY-FIVE LIMOUSINE UPHOLSTERY AND SEAT STYLING

UPHOLSTERY STYLING. The chauffeur's compartment of the Fleetwood Seventy-Five Limousine comes in rugged Sierra grain Black leather fashioned in 2-inch pleats. The rear compartment, in horizontal pillow and button style, is tailored in rich Dumbarton cloth inserts with leather accents and either all Divan cloth or all Decordo cloth. Dumbarton is an ornate Matelasse fabric that is exceptionally rich looking and is available in Black only. Divan cloth features a delicate texture and extremely smooth hand and comes in three colors. Decordo cloth has a narrow ribbed design and is available in Med. Gray.

SEAT STYLING. The bench type seat with straight-across backrest and folding center armrest in the rear compartment is standard.

DIVISION GLASS. A glass partition dividing front and rear compartments may be raised or lowered by the controls conveniently situated on left and right rear quarter trim panels.

AUXILIARY SEATS. Two auxiliary seats provide extra seating space when needed. They fold against the rear of the front seat back when not in use.

VINYL TOP. A padded vinyl top is an extra charge option that lends a distinctive two-tone appearance to the Limousine and further isolates sound from the interior.

FLEETWOOD SEVENTY-FIVE SEDAN AND LIMOUSINE LANDAU ROOF OPTION

LANDAU ROOF. The Landau Roof, with no rear quarter windows, padded vinyl cover, small rear window and Landau Bows, reflects an exceptionally elegant touch and is available exclusively for the prestigious Fleetwood Seventy-Five Sedan and Limousine.

LANDAU BOWS. An attractive Landau Bow decorates each sail panel of the Landau Roof. The arms are of bright metal with a brushed finish on the end studs and center pivot section.

REAR WINDOW STYLING. The Landau Roof comes

with a small, rectangular rear window to give rear compartment passengers added privacy.

OPTIONS. Two options are available when ordering a Landau Roof:

1. Omit the Landau Bows
2. Select the regular size rear window

EXTERNAL ORNAMENTATION. The Landau Roof comes with a Fleetwood plaque on each sail panel. The distinguished wreath and crest on each lower rear quarter panel is also included.

ENGINE TEST

All Cadillac engine and transmission units are performance tested before they are installed in cars. Gasoline, oil and coolant supplies and exhaust pipes are connected and the engines are carefully inspected for such important functions as proper carburetor setting, timing and engine operation during a 15 minute test run at approximately 1700 rpm. Engines that check out continue on a conveyer towards Final Assembly. Should an engine not meet the performance standards, it is returned for corrections and inspected again before being released for mounting in a car.

OPTIONAL EQUIPMENT

ENGINE MOUNT

The engine and transmission unit, weighing close to 1000 pounds, is dropped into place on the chassis with an overhead hoist. One man raises and lowers the unit electrically with a hand control while a second man guides the unit onto the rubber-cushioned engine mounts. Alignment is critical, and the workers take pride in practicing exacting standards of accuracy that have helped make Cadillac synonymous with quality for almost seven decades.

OPTIONAL EQUIPMENT

CADILLAC AM-FM RADIO
CADILLAC AM-FM SIGNAL SEEKING RADIO
CADILLAC AM-FM STEREO SIGNAL SEEKING RADIO
STEREO TAPE PLAYER

A CADILLAC AM-FM RADIO

—brings passengers a large choice of stations for more enjoyable listening. This fully transistorized radio with a new integrated circuit for increased reliability directs sound through the front or rear speaker or both. Pre-setting the five pushbuttons permits instant pushbutton tuning to favorite stations. The AM Band selection button is on the left, while the FM Band selection button is on the right. To make tuning less confusing, only the dial for the selected frequency band is visible. The letters AM or FM light up when selected. Bass and treble adjustment controls are also provided.

B CADILLAC AM-FM SIGNAL SEEKING RADIO

—permits automatic search tuning for instant sound and excellent tone. A special selector bar is provided with this completely transistorized radio which automatically "seeks" out and tunes in the strongest station in the listening area. To simplify tuning, only the dial for the selected frequency band is visible. The letters AM or FM light up when selected. A new integrated circuit provides an appreciable increase in reliability. Base and treble controls and front and rear speakers are also provided. A Foot-Control Switch, optional at extra charge, permits changing stations quickly and easily by merely tapping the switch with the toe.

C CADILLAC AM-FM STEREO SIGNAL SEEKING RADIO

—features unsurpassed tonal realism for "live" entertainment listening. The best all-around sound in radio

listening comes from this Cadillac transistorized unit that radiates vibrant, concert-hall sound. A new integrated circuit provides increased reliability. The true richness of this stereo sound is broadcast throughout the car with two speakers in front and two in the rear that are cross-balanced—left front with right rear and right front with left rear. Thus, regardless of where passengers sit, they receive the fullness of stereo reception. There is also a unique feature that belongs exclusively to Cadillac. When in the "Stereo Only" mode and the signal seeking selector bar is pushed, the radio automatically selects only Stereo stations. Not available on Seventy-Five models. A Foot-Control Switch, optional at extra charge, permits changing stations quickly and easily by merely tapping the switch with the toe.

D STEREO TAPE PLAYER

—offers the unique pleasure of listening to personalized, pre-recorded music without interruption. Mounted on the lower instrument panel, this attractive looking 8-track stereo unit is available with any of the superior Cadillac radio systems and provides a truly enjoyable musical experience. Inserting a tape cartridge into the unit automatically switches power from the radio to the stereo player. After the cartridge is positioned in the unit, the controls may be adjusted for proper volume, tone and balance between speakers. Each of the tracks in the cartridge will automatically play in succession or tracks can be individually selected by pushing the PROGRAM bar. The stereo tape player is a dealer installed item available on all models.

REAR COMPARTMENT RADIO CONTROLS
AUTOMATIC CLIMATE CONTROL
TILT AND TELESCOPE STEERING WHEEL

A REAR COMPARTMENT RADIO CONTROLS

—provide added listening pleasure for rear seat passengers. Available on the Seventy-Five Sedan and Limousine equipped with the Cadillac AM-FM Signal Seeking radio, the rear compartment controls are located underneath a hinged cover in the right rear armrest just forward of the air conditioning controls. The driver can operate the radio system with the front compartment controls when the rear compartment controls are turned off.

B AUTOMATIC CLIMATE CONTROL

—provides thermostatically controlled interior temperature twelve months a year. Passengers can bask in perfect comfort regardless of what the weather is like outside. Cadillac Automatic Climate Control cools in summer and heats in winter to make city driving or turnpike cruising more convenient, more pleasurable. The driver simply dials the desired temperature and heated or cooled air maintains that temperature automatically. Significant improvements for 1970 include increased cooling capacity and a larger condenser that makes the system function more efficiently in city traffic and during idle operation. When outside air is above approximately 35°, incoming air is first cooled to control humidity, then reheated to assure maximum comfort and minimum window fogging. The following operating positions are provided: VENT, for ventilation using outside air at a fixed low blower speed; LO, for automatic operation at a fixed low blower speed; AUTO, for controlling heating, air conditioning and blower speeds according to the in-car temperature; HI, for automatic operation at a fixed high

blower speed using 80% recirculated air for maximum cooling and the elimination of outside dust and objectionable odors; FOG, for de-fogging; and ICE for de-icing. The six air outlets may be adjusted for air flow direction or turned off individually. For dual system Automatic Climate Control, standard on Seventy-Five models, see page F-16.

C TILT AND TELESCOPE STEERING WHEEL

—permits selection of the most natural and comfortable driving position. Cadillac's Tilt and Telescope Steering Wheel fits the driving requirements of virtually all drivers by moving four ways—up and down, in and out. This versatile steering wheel permits drivers to experience maximum comfort, convenience and driving ease, particularly if it is ordered along with Cadillac's 6-way power seat. It is also helpful in minimizing tension and fatigue on trips by periodically changing the wheel's position. The tilt adjustment is achieved by lifting the lower lever at the left of the steering column, tilting the wheel to any one of the six positions and releasing the lever.

Equally as easy is the telescoping adjustment. Moving the small tab atop the steering column to the left allows the wheel to be telescoped within a three-inch range of adjustment that's comfortably right. Moving the tab to the right locks the wheel in position. The tilt and telescope adjustments may be made while the car is in motion, but care should be exercised when doing so. These adjustments can also be made to permit easier entry and exit.

STRATO-BUCKET SEATS (ELDORADO ONLY)
POWER SEATS (SIX-WAY)
DUAL COMFORT FRONT SEAT
SOFT RAY GLASS
AUTOMATIC LEVEL CONTROL

A STRATO-BUCKET SEATS (ELDORADO ONLY)

—provide individual seating comfort. Strato-Bucket seats with attractive center console is an extra charge option that many Eldorado owners find to their liking. Individual driver and passenger controls permit backward and forward seat adjustment electrically. A 4-way power seat adjustment for the driver only is optional at extra charge. It permits the driver to move the seat backward and forward and tilt the seat back.

B POWER SEATS (SIX-WAY)

—provides a choice seating position to make motoring more enjoyable. The front bench seat and Dual Comfort Front Seat may be adjusted electrically in six different directions to assure a more comfortable seating position. On the bench seat, controls are mounted on the driver's side. Fingertip pressure moves the seat backward or forward, up or down and adjusts the seat's angle.

On the Dual Comfort Front Seat, controls are mounted on both the driver and passenger portions of the seat to permit adjusting the seats to individual driver and passenger comfort. The 6-way power seat is available for the passenger side if the 6-way power seat adjustment is ordered for the driver's side.

C DUAL COMFORT FRONT SEAT

—permits personalized seating for more relaxed motoring. This unique seat provides the stylish luxury of a full bench seat and the personalization of individual seats. Each of the two portions adjusts individually to give driver and passengers the comfortable seating position of

their choice. Controls are located on the lower seat side panel for backward and forward adjustment, 2-way power on the driver portion and 2-way manual on the passenger portion. The Dual Comfort Seat is standard on the Brougham and optional at extra charge on the Sixty Special and all De Ville models except Sedan de Ville.

D SOFT RAY GLASS

—adds immeasurably to motoring comfort. It is specially tinted to shield the car's interior from heat and sun glare, thus aiding passenger comfort and reducing eye strain. When cars are equipped with Automatic Climate Control, tinted windows reflect some of the sun's heat rays, thereby lessening the strain placed on the air conditioning system. Soft Ray Glass includes tinted windows all around with additional shading on the upper portion of the windshield.

E AUTOMATIC LEVEL CONTROL

—maintains Cadillac's famed riding and handling characteristics under varying load conditions. It is the ideal way to keep the car level with the road when carrying rear seat passengers, vacation luggage or when pulling a trailer. The system consists of a vacuum-operated air compressor and rear mounted Superlift Shock Absorbers. Air is directed into or out of the shock absorbers when loading or unloading, automatically helping keep the car at a constant height. Thus, rear-end sag is reduced, and Cadillac's excellent posture and headlight pattern are maintained. Automatic Level Control is effective with any load up to 500 pounds. It is standard on all Fleetwood models.

CRUISE CONTROL
GUIDE-MATIC
TWILIGHT SENTINEL
REMOTE-CONTROL TRUNK LOCK

A CRUISE CONTROL

—maintains a desired speed without the driver having to use the accelerator. It is an automatic speed control device that helps increase comfort and economy during turnpike and noncongested highway motoring. Simply move the switch to ON, accelerate to the desired speed and press and release the pushbutton engage switch at the end of the directional signal control lever. Cruise Control will maintain the selected speed without foot pressure on the accelerator pedal, even in gently rolling terrain. To disengage the system, the driver merely touches the brake pedal or presses the control button, slows to the desired speed and releases the button. This Cruise Control system is essentially the same system as offered on the 1969 Eldorado, but it is new this year for all other models.

B GUIDE-MATIC

—for more enjoyable nighttime driving. Guide-Matic headlamp control takes over the responsibility of dimming the headlamps from high beam to low beam when a car approaches from the opposite direction or when driving behind another car at night. This ingenious accessory also returns the headlamps to high beam after the car has been passed. Using the special override foot switch permits the driver to switch from low beam to high beam as a reminder to the approaching driver that he forgot to dim his headlamps.

C TWILIGHT SENTINEL

—for maximum peace of mind and convenience at night. The twin benefits of Twilight Sentinel are becoming increasingly popular among Cadillac owners. This invaluable nighttime aid can be set to turn the headlamps on automatically as darkness approaches and turn them off when sufficient daylight returns. Equally beneficial is the delayed timer switch. When activated, it permits keeping headlamps and either cornering lamp on up to ninety seconds after turning off the ignition, thus providing a path of light at night as driver and passengers exit the car. The timer switch then automatically turns off the lights. Ladies, especially, appreciate the security of Twilight Sentinel.

D REMOTE-CONTROL TRUNK LOCK

—permits unlocking the trunk lid while seated comfortably in the car. The convenience this popular accessory affords, especially during inclement weather, is much appreciated by Cadillac owners. Lightly touching the trunk-lock button located just inside the glove compartment allows the trunk lid to unlock and raise slightly, permitting access to the luggage compartment. When the lid is lowered and nearly closed, a power latching mechanism locks the trunk lid securely in place. A red light on the instrument panel informs the driver when the trunk lid is unlatched.

CONTROLLED DIFFERENTIAL
WHITEWALL TIRES
REAR WINDOW DE-FOGGER
ELECTRIC DOOR LOCKS
TRUMPET HORN

A CONTROLLED DIFFERENTIAL

—for surer traction and handling under varying road conditions. In any DRIVE position as well as REVERSE, power is directed to the driving wheel having a positive grip on the road surface, thereby minimizing the chance of becoming stuck. Thus, the driver can be more confident whenever he encounters such hazards as ice, snow, sand, mud, gravel and wet or oily pavement. Controlled Differential also adds stability on rutted roads and contributes to longer tire life. Not available on the Eldorado.

B WHITEWALL TIRES

—to enhance Cadillac's distinctive appearance. Newly styled Cadillac whitewall tires, with two bands of white, make them a natural compliment to fine car ownership. This dual stripe whitewall tire is available on all models in an L-78-15 size tubeless. The bias belted construction of this tire, one of the latest developments in tire manufacturing, provides greater tread mileage and improved puncture resistance. Built-in tread wear indicators let the driver know when the tires become dangerously worn and need to be replaced. Blackwall tires in the same size as listed above are standard.

C REAR WINDOW DE-FOGGER

—aids rear visibility during inclement weather. Fan-blown air is directed across the rear window to help keep fog and mist and the accumulation of ice and snow from obscuring rearward vision. The control switch, located on the instrument panel and manually controlled, provides

two operating positions to permit setting the blower according to the amount of air flow required to keep the rear window clear. The rear window de-fogging feature is available on all Cadillacs, including the De Ville Convertible. It is integral with the rear heating system on the Seventy-Five Sedan and Limousine.

D ELECTRIC DOOR LOCKS

—provide added convenience and security, especially when young children are frequent passengers. An actuator switch located on each front door armrest is used to operate the system. Moving the switch outboard automatically locks all doors simultaneously. Conversely, moving the switch inboard unlocks all doors. Once the doors lock, inside door handles are inoperative to prevent accidental opening. This option also provides, on all coupes, the automatic release of seat back locks when either door is opened. The actuator switches on the Limousine are situated on the driver's door armrest and on the right rear door armrest.

TRUMPET HORN

—adds an extra note of distinction to fine car motoring. The high "C" note extracted from the trumpet styled horn is a truly satisfying sound. When combined with the other notes of the standard Cadillac horn, the resulting harmonious sound carries authority in a most pleasing and distinguishable manner. The available Trumpet Horn is another of the many ways in which Cadillac helps make motoring more personal and more enjoyable.

SPECIAL ORDERS

Cadillac's highly specialized engineers, with the aid of the latest technical equipment and devices, apply their genius to probing specific characteristics of suspension, transmission and power development. They carry out their assignments always mindful of the fact that customer comfort, convenience, reliability and safety must be designed into the Cadillac. Here, new applications in transmission development undergo extensive load testing on a dynamometer before being incorporated into actual production models.

LEGEND

N/C	No Charge
N/A	Not Available

STD	Standard Option—Extra Charge
	Special Request—Extra Charge

Dual Comfort Front Seat

Not Standard

The Dual Comfort Seat is not a standard option in the Sedan de Ville, style L.

It may be special ordered in either cloth or leather upholstery, code S.

Front Seat Adjusters

The Dual Comfort Seat standard and optional adjusters are:

Driver

Standard—2-way power

Optional—6-way power—code Y

Passenger

Standard—2-way manual

Optional—6-way power—code V

However, the 6-way passenger option must always include a 6-way driver seat option, codes VY.

V Without Y Not Available

A combination of 6-way passenger (V only) with a standard 2-way driver adjuster is not available.

Eldorado Bucket Seats

Leather or Cloth

Black, 451 B leather Bucket Seats is a production option. Bucket Seats in other Eldorado leather or cloth colors may be special ordered.

Trim Style

Bucket Seats in cloth or leather will be upholstered in 2" pleat styling.

The rear seat will also be in matching 2" style. Cloth Bucket Seats will have the rear seat center section and all cushion skirts in vinyl.

Console

A center console in matching color is included with Bucket Seats.

Seat Adjusters

The optional driver's Bucket Seat adjuster is a 4-way type that adjusts back and forth and pivots from a center point.

This means that the front and rear ends of the seat will move up or down but the entire seat does not raise and lower.

The passenger Bucket Seat has a power 2-way adjuster without option.

Leather in De Ville

Special Leather Colors

Non-standard leather colors may be ordered on special request. Some colors or combinations are optional on certain body styles but not on others. For example, White Leather with Blue Carpets is optional on the Convertible and Coupe de Ville, but must be special ordered on the Sedan or Hardtop.

Notch Back Front Seat

When upholstered in leather, De Ville four door cars will have a notch back Coupe type front seat. Cloth upholstered Sedans have a straight across backrest.

The Coupe seat has a free-standing center arm rest and individual backrests which in Sedans are anchored to prevent folding forward.

Dual Comfort Seat

Regardless of body style or upholstery (cloth or leather) the Dual Comfort Seat will have a notch back.

Sedan Seat

A bench type seat with a straight across backrest can be supplied at extra charge in a leather upholstered Sedan if so specified.

Leather in Brougham or Sixty Special

Front Seat Type

The Brougham front seat will be Dual Comfort type with a notch back. The Sixty Special will have a regular bench type with a straight across backrest unless the extra charge Dual Comfort Seat is ordered.

Leather Colors

There are five leather colors that are not standard production options which may be special ordered.

Lt. Gray	056
Med. Blue	060
Med. Turq.	068
Dk. Green	071
Dk. Mauve	087

In addition, various carpet and two-tone combinations may be ordered.

Maximum Leather

Leather Trim

Leather implies the use of vinyl for certain interior components. However, if a substitution of leather on all possible areas is desired, "Maximum Leather" must be specified.

Maximum Leather

Leather will be applied in place of vinyl on the seat cushion skirt, sides of backrests, side of center arm rests, front seat back insert.

Extra Charge

The extra charge for Maximum Leather is higher than the schedule of M.S.R. prices for regular special leather. It may be ordered on all cars except Calais.

Leather Front

Leather Front Compartment

A Brougham or Sixty Special may be ordered with cloth in the rear and leather in front.

Color Distribution

When the front and rear compartments are ordered in different colors, they are divided as follows:

Front Color

Seat
Carpet
Doors
Seat Wings
Instrument Panels
Windshield, Garnish
& Header
Moldings

Rear Color

Seat
Front Seat Back Panel
Assist Straps
Front Seat Back Inserts
Lower Front Seat Back
Carpet Area
Carpet
Center Pillar
Doors
Windhose
Headlining
Shelf

Seats Only in White Leather

Seats Only

The seats in White leather with Black or other color doors may be ordered.

This offers greater contrast by increasing the dark tone areas to include the entire interior except for the seats.

Headlining

In closed cars, special consideration should be given to the headlining color, as White may be preferred. If so, specify 352 under Headlining.

Two-Tone Convertible

An interesting Convertible combination is one in which the doors, etc. are harmonized with the exterior, i.e. No. 19 Sable Black color with Black doors and White seats.

Laces

Another option for consideration is the Laces. They may be ordered in a dark tone for contrast on the seats.

Other Two-Tone Suggestions

Combinations of Med. Beige and Dk. Brown ; Med. Gold and Dk. Green with matching tops and exterior colors.

Extra Charge

As a matter of information, the extra charge for a SEATS ONLY upholstery combination will be the same as a complete special leather upholstery interior.

Two-Tone Combinations

Black and White

A two-tone interior may be created by specifying a contrasting bolster color. This provides an accent and relief from an over-all monotone effect of a standard interior. On such combinations, the leather or vinyl center section of the seats, cushion skirt and end facings of backrests will be in the bolster color.

More Contrast

However, if more contrast should be wanted, the back of the front seat back panel and seat wings may also be ordered in the bolster color. Order should be marked "Front Seat Back Panel Same as Bolster."

The doors, headlining, inserts and instrument panels will be in the basic trim color.

Other Combinations

In addition to an interior with the sharp contrast of White and a dark color, other attractive arrangements of compatible colors may be created by combining such shades as Med. Beige and Gold, or Dk. Brown, Green and Med. Beige.

Eldorado Bucket Seats

The upholstery material on a Bucket Seat extends over the entire top surface of the cushion and face of the

backrest. Therefore the entire cover will be in a single color.

However, the rear seat in a two-tone combination will have the center section in the bolster color similar to the treatment of a bench seat.

Vinyl Upholstery

For Calais Series

Colors	Codes
White.....	252
Med. Blue.....	260
Dk. Blue.....	266
Med. Turq.....	268
Dk. Green.....	271
Med. Gold.....	284
Dk. Brown.....	286
Dk. Mauve.....	287
Med. Red.....	288

The above special request colors are in addition to Black, 251 and Med. Beige, 283, which are standard vinyl options at nominal extra charge.

White Vinyl

With White vinyl, 252, the following will be Black:

1. Instrument panels and rear shelf
2. Carpets
3. Seat Belts
4. Door Pulls
5. Back of front seat back panel in Sedan N (In Coupe G it will be White).

Other colors in place of Black may be ordered for these components. To order, specify the following in any standard Calais color:

1. Instrument Panels
2. Carpets
3. Seat Belts

Leather Not in Calais

A single piece of fabric covers the seat cushion in the Calais trim styling. Also a bolster extends across the entire top of the backrest in the Sedan N and rear seat of style G.

This means that a single piece of material is required to upholster these areas and cowhides are not large enough to cover them.

Special Carpets

White Leather

Carpets and Instrument Panels in color other than Black may be ordered with White leather (or any other color).

Exterior Colors

Changes in carpet colors are made to create a more harmonious combination with the exterior color. This and the instrument panel color should be considered when selecting the carpet.

Avoid Three-Tones

The instrument panel color is an important consideration because it appears as an extension of the hood. It should match or complement the exterior and carpet color. If not, a three-tone interior may result.

All Cloth

Omit Leather and Vinyl

To eliminate leather or vinyl from the body contact surfaces of the cushion and backrest, specify "All Cloth." Cloth will then be substituted on the areas that would ordinarily be trimmed in leather or vinyl. These are primarily the center arm rest section and cushion skirt. A discrepancy of patterns may occur in the center where the cloth material is joined. These are separately cut pieces and therefore, may not match exactly.

Trim Styles

In all series, the standard trim style will be used. The bolster area will be plain, similar to the leather or vinyl that it replaces.

Cloth Front

Cloth Front and Rear

In a "75" Limousine S, the same cloth fabric used to upholster the rear compartment may be substituted for the Black leather on the front seat.

Trim Style

The cloth front seat trim will be 2" pleats similar to the leather style.

Front Doors

The front doors will be Sedan R type which includes Tamo Wood panels and lower carpet in door color.

Carpets and Instrument Panels

The front compartment will be in the same color as the front seat.

Wool Broadcloth

Standard Fibres

All standard option upholstery cloths are a blend of Nylon and Viscose rayon. On special request a Gray Wool Broadcloth can be supplied (in limited quantities).

Trim Style

The entire top of seat cushion and face of backrest will be cloth covered. There will not be any leather used on the center arm rest section. In all series, the standard trim style will be used. In a De Ville or Eldorado, the center leather or vinyl section will be in cloth unless otherwise requested.

Basic Trim Code

With Gray Broadcloth, the basic trim should be 716 or 016. This means that except for the seat cushions and

backrests which will be Broadcloth, the balance of the entire interior from carpets to headlining will be in the standard production combination of materials.

Trim 719

Trim Style

Decordo trim will be supplied in an all cloth trim style for any series.

Mark the trim 719. It means the entire top cover of the seats and face of backrests will be in the cloth fabric.

Color

This Fleetwood "75" cord material is medium Gray. However, certain prefabricated sections will be light Gray. Such components as the headlining, back of front seat back panel, doors, door pulls, seat belts will be light tone. Combination 016 is, therefore, specified for the basic trim which represents the light tone color on these parts.

Landau Roof

Available on "75" Limousine or Sedan

For a formal appearance of unmatched distinction a Landau Roof option is offered on the Fleetwood "75". In this treatment the upper rear quarters are blocked in, the roof padded and vinyl covered, a fully chromed Landau Bow applied to each side and the rear window size reduced.

Other options that may be specified are:

1. Omit Landau Bows
2. Retain regular rear window size

Exterior ornamentation includes a FLEETWOOD plaque on the vinyl upper rear quarters and a wreath and crest on the lower quarters. The wreath and crest also appears on the lower rear quarters of standard "75" cars. A Padded Roof only may be ordered by marking a top color number under TOP on the order form.

Firemist Colors

Extra Charge All Body Styles

Seven Firemist colors are offered on all body styles at extra charge.

Each of the Firemist options is distinctive and reflects a strong primary color value in its category.

Firemist color code numbers start with 9 and may be ordered by marking the number in the regular color space on the order form.

Usually, there is no procurement delay in ordering any of these regular production Firemist colors. Two-tone exterior color combinations are not available as the body styling does not provide a separation of roof and upper rear quarters from the lower panels.

Except on the Calais series and Fleetwood Sixty Special, a two-tone appearance may be obtained by ordering a Vinyl Roof in a contrasting color from one of the seven options.

Special Colors

Past model or non-standard colors can be supplied on special order at extra charge.

To order type 00 in COLOR space on order form which denotes that color is not a standard option.

In space captioned SPECIAL EXTERIOR COLOR describe color by name and model year, e.g. 1964 Lime, 1959 Seminole Red, etc.

Allow four to five weeks for shipment of any special color. Orders for past model colors are matched in current high gloss acrylic materials. The previous color, especially if it is a few years old may have been formulated with now obsolete pigments. The newer chemicals have improved color retention and durability. However, they could produce a variance in appearance between the newer and older color.

This is a matter of information that may be of special interest to fleet owners who add new cars in the original fleet colors and have noticed a difference in their older and newer vehicles.

NOTE: For more specific details on the custom interior and/or exterior colors and ordering procedures in this section, consult the 1970 Cadillac Optional Specifications Manual.

Glossary of Interior Styling Terminology

Back of Front Seat Back—The back of front seat that is visible to the rear seat passengers. Also called division. Also called frame.

Backrest—The upright cushion against which passengers rest.

Backlight—Rear window.

Belt Line—The uppermost part of doors and rear quarters, extending from windshield base to rear shelf.

Bench Type Seat—A regular seat with straight-across bench type cushion and backrest as contrasted with bucket seats.

Bezel—A sloping rim around an object such as headlamp lens, brake pedal, etc.

Biscuits—Style of upholstery when material is formed into square or oblong sections by seams or pressed indentations.

Body Cloth—The basic trim material used on seat inserts—usually the heaviest weight.

Bolsters—The front, side or center part of a seat cushion, separated from the back or center by a welt, lace or seam. The top, side or center part of a backrest sometimes extending along the sides in a U or H shape.

Buttons—Used to produce a tufted or biscuit effect in the upholstery design; to retain trim covers and as an appearance item.

Coated Fabric—A synthetic material with a leather-like appearance, also called expanded vinyl and elascofab (Elastic-coated-fabric).

Center Pillar—A rear door hinge support structure between front and rear doors terminating at belt line on hardtop sedans.

Combination—When referred to interior upholstery, it is the complete interior that includes a combination of colors and materials such as cloth, leather, vinyl, etc.

Coupe Type Seat—Individual backrests, creating a notched appearance. On 4-door styles the backrests are anchored and do not fold as they do in 2-door models.

Cowl Quarters—The section forward of the front door on inside of front compartment.

Cushion—The lower seat cushion or section upon which passengers sit.

Cushion Face—Vertical surface forming front and sides of seat cushion.

Cut and Sew—Cutting material to pattern; sewing and molding to form a set of "trim stock".

Dielectric—A heat and pressure process to unite, form and make designs on fabrics.

Division—The back part of front seat. Separation between front and rear compartments.

Door Pull—A grip handle on upper door panel.

Door Pad—The upholstered part of a door or section below window.

Dual Comfort Front Seat—This seat is divided at the left of the center armrest so that 40% of its width is for the driver and 60% is for passengers. A full center armrest is attached to the passenger section of the back rest.

Dust Boot—Convertible top cover when lowered. Also called top boot.

Embossed—A dielectrically formed design on coated fabric.

Expanded Vinyl—An extra thick vinyl coated fabric. The soft resilient feel is attained by sandwiching a sponge-like cellular structure between the backing fabric and plastic topcoating.

Front Seat Back Panel—A machine-formed vinyl panel that covers top and sides of front seat back.

Garnish Moulding—The frame next to the glass on the inside of windshield, door, rear window and along side of headlining.

Inserts—When used with reference to upholstery, it is the center section back of bolster on the cushion and below the bolster or in the center of the backrest.

Leather Upholstery—This term means that a combination of genuine leather and coated fabric is used throughout.

Instrument Panel—The instrument panel, glove compartment door and ash receiver doors.

Luxury Coil Springs—A coil seat spring, wrapped in sheeting or muslin, wider in diameter than marshall type.

Marshall Type Springs—Narrow diameter, individually wrapped in burlap, coil seat springs.

Molded Plastic—A formed plastic, such as front seat back panel.

Natural Grain—Leather with a natural hair cell without any additional design.

Notched Back—A separation at top between individual backrests. Usually in a Coupe type seat.

Nylon Cloths—Nylon warp fibers with Viscose filler. Any reference to a Nylon cloth means that the material is a Nylon-Viscose blend.

OO—When used on new car order, it refers to a special exterior color.

Pipes or Pleats—Style of upholstering when material is folded or separated by seams, visible or invisible.

Rear Quarters—When applied to interior it may refer to rear upper area below headlining; on 2-door cars, the section back of doors. For exterior reference it may mean rear section above belt line; lower section back of door extending to rear end of car.

Rear Shelf—The area between rear seat back and rear window. Package shelf.

Risers—A section raised above its surrounding area.

Sail Panel—Refers to rear section above belt line.

Seaming Laces—Also called welts. A fabric covered cord or piping used to join by sewing two sections of material. This also has the benefit of locating and properly positioning the upholstery material to form and preserve the required shape.

Sedan Type Seat—A straight-across type seat without individual backrest separation.

Seat—Combination of backrest and seat cushion which comprises entire seat assembly.

Seat Cover—The top of cushion or face of backrest which has body contact.

Seat Side Panels—A section along side of front seat backrest.

Seat Wings—Lower front seat side panel.

Set of Trim Stock—The various components that comprise a complete interior upholstery.

Skirt—See Cushion face.

Strato Backrest—Thin, tapered backrest.

Top Boot—Convertible top cover when lowered.

Trim—The interior upholstery combination.

Trim Style—The design into which the upholstery fabrics are shaped, such as pipe, biscuits, plain, etc.

Vacuum Formed—Vinyl or plastic molded by vacuum instead of pressure.

Windlace—The fabric or leather covered windhose applied around doors as an air seal.

X—Refers to special upholstery on new car order.

NEW FEATURES

Bodies for the "Standard of the World" are lowered 20 feet from an overhead conveyer to the production line where three Cadillac workers guide the body onto the frame. Accuracy in mounting the body is extremely important at this point because later on during Final Assembly the correct fit of sheet metal components hinges directly upon proper body-frame alignment. This is probably the most dramatic point on the Final Assembly line since the body marks the car for the first time as definitely a Cadillac.

CADILLAC STYLING

A quick glance at the 1970 Cadillac proves without question that traditional dignity and refined styling make the Cadillac everything the name Cadillac implies. The traditional cross-hatch grille remains the dominant feature up front. Horizontally styled twin headlamps and the wrap-around design of the combination parking lamps and directional signals play an important but subordinate role in the front end graphics. The deep-draw nose of the long hood and deep-section design of the bumper add to the front end appearance. The "V" emblem on the hood of Calais and De Ville models is eliminated. In its place is a larger version of the Cadillac crest. A winged crest adorns each front fender.

A profile view reveals strong, horizontal lines. Horizontal molding accents on the wrap-around lamp unit that houses

combination parking, directional, cornering and side marker lamps helps lengthen the sweeping appearance of the side. Calais and De Ville models have a sleek chrome strip along the entire side of the body. Fleetwood models except the 75's utilize a chrome strip with vinyl insert for added character and protection. The rear side marker lamp and reflex assembly is incorporated into the painted tail lamp extension.

Rear styling takes on a more decisive character. The deep-section bumper incorporating back up lamps in the center area and reflex assembly in the outer area contributes to the massive, yet clean appearance of the rear end. Tail lamps are newly designed and fit in well with the rear end styling. A larger version of the Cadillac crest is used in place of the "V" emblem on the deck lid of Calais and De Ville models.

ELDORADO STYLING

The smart restraint of Eldorado styling for 1970 once again puts this outstanding personal luxury car in a class by itself. The bolder, horizontal accent lines in the cross-hatch grille make the unmistakably Cadillac grille the focal point of attention up front. An Eldorado 8.2 Litre nameplate between these accent lines adds distinctive identity to this fine automobile. The deep draw nose of the hood and chrome accents down the centerline add another strong point to the front end appearance. Redesigned twin headlamps now play a less conspicuous role up front. Parking lamps and directional signals are incorporated into a single, wrap-around unit with a special winged crest embossed into each light lens.

Long, smooth lines with distinctive roofline contour establishes the Eldorado profile. A new chrome strip with vinyl

insert provides additional character as well as desired protection. Front side marker lights and cornering lights are meticulously integrated into a single unit mounted low on the front fender. Eldorado lettering is relocated low on each front fender just behind the wheel well. A somewhat sporty flair is achieved by the sculptured, chrome accented wheel housings.

Eldorado rear styling is notable for its sweeping rear deck lid and "V" design of the rear window. Redesigned tail lamps, stop lights and directional signals are all incorporated into a single unit that is much more understated, permitting the rear deck and massive bumper to play increased dominant roles in the rear end graphics. The back up light is integral with the fuel filler door and reflectors are positioned in the rear bumper.

INSTRUMENT PANEL

The instrument panel is modified for 1970. It is based on principles that will provide the Cadillac driver with outstanding protection and convenience. Controls and instrumentation are exceptionally well-placed behind the steering wheel for excellent visibility and accessibility. The entire instrument and control area on Calais cars is in a matte black encasement for better glare reduction. A rich, new Tamo Wood applique is used on all De Ville and Fleetwood models.

Instruments the driver looks at most—speedometer, odometer and reminder lights for BRAKES, ENGINE TEMP., GEN., OIL and WATER TEMP.—are directly in front of the driver. The new fuel gauge is immediately to the left of the speedometer, also in excellent visual

range. Directional signal indicator lights are placed just below and at each end of the speedometer. Windshield wiper-washer controls are conveniently situated on the left hand door panel extension.

Detail in the cove area above the glove compartment includes a matte black treatment on the Calais and a Tamo Wood applique on De Villes with leather upholstery and all Fleetwoods. A brush finish, anodized aluminum applique is used on De Villes with cloth upholstery. There are also new series identification emblems in script lettering— "Calais," "De Ville," "Fleetwood" (for Sixty Special and Limousine), "Fleetwood Brougham," "Eldorado" and "Cadillac" for the commercial model.

SPECIAL VINYL ROOF STYLING
SIDE MOLDING WITH VINYL INSERT
CONVERTIBLE REAR WINDOW DE-FOGGER
WHEEL COVERS AND BELTED BIAS TIRES

A SPECIAL VINYL ROOF STYLING

The 1970 Fleetwood Eldorado, when ordered with a custom vinyl roof, is further distinguished with a special styling treatment of the vinyl roof. A single center seam in the vinyl roof follows the natural centerline of the car. This center seam is a natural complement to the single center contour line beginning at the front edge of the hood, extending through the "V" shaped rear window and terminating at the rear of the deck lid.

B SIDE MOLDING WITH VINYL INSERT

The side view of all Fleetwood models except the 75's takes on a new look for 1970 with a bright chrome molding strip with vinyl insert heat-sealed in place. The protective beauty of this vinyl insert will be especially appreciated by car owners when parking in confined areas. When other peoples' car doors are opened and inadvertently strike the vinyl insert, no unsightly and harmful paint chipping will occur to mar the Cadillac's fine finish. The insert also affords some protection against nicks to the car door edge striking the vinyl insert as the soft, resilient vinyl cushions the blow of the door. When the Eldorado and Brougham are ordered with one of the fashionable vinyl tops, the insert color will match the vinyl top color. The Sixty Special will have a black insert as will the Eldorado when a vinyl top is not ordered.

C CONVERTIBLE REAR WINDOW DE-FOGGER

A new rear window de-fogger is available for the 1970 De Ville Convertible to aid in keeping the rear window clear during adverse weather when the driver is especially concerned with visibility to the rear of the vehicle. In mild, humid weather, fog or steam sometimes forms

on the inside of the back window, obscuring rearward vision. The de-fogger unit directs fan-blown air across the rear window to help alleviate this undesirable condition. During wintertime, the gently blowing air helps prevent the accumulation of ice and snow on the outside of the rear window. A two-speed, manually controlled switch is located on the instrument panel and may be set according to the amount of airflow desired. The rear window de-fogger is available at extra charge.

D WHEEL COVERS AND BELTED BIAS TIRES

New wheel covers contribute to the Cadillac's overall beauty and dignity. These handsomely styled wheel covers have a combination bright and brushed chrome finish with a black paint ring near the center and another one near the outer circumference. Black paint between the bright ribs gives the wheel covers a louvered appearance for added attractiveness. The Cadillac crest is centered inside the small black ring. Eldorado wheel covers are slightly different to complement the distinctive styling of the Eldorado. The L-78-15 size tubeless tire is built with two polyester cord plies crisscrossing at an angle. Topping this are two fiberglass cord belts just under the tread. This helps stabilize the tread to provide increased tread mileage, responsive handling during braking and acceleration and excellent traction on wet surfaces. The fiberglass-reinforced belting under the tread also provides increased puncture resistance. The wide tread gives excellent footprint contact with the road surface for added stability. Built-in tread wear indicators let the driver know when the tires are worn to the point of needing replacement. Blackwalls are standard, whitewalls optional at extra charge.

STEERING WHEEL
 NEEDLE-TYPE FUEL GAUGE
 TAMPER RESISTANT ODOMETER
 RADIO PUSHBUTTONS—ASH TRAY
 WINDSHIELD ANTENNA
 ELDORADO 8.2 LITRE ENGINE

A STEERING WHEEL

The steering wheel is newly styled this year to complement Cadillac's rich interior. The distinctive three-spoke design, generously padded for driver protection, features a textured appearance and the Cadillac crest or, on Fleetwood models, the wreath and crest insignia recessed in the center. New horn bar controls in each of the three spokes make horn sounding fast and easy. In addition, the horn may be sounded by pressing the recessed center hub. Around the rim is a rich Tamo Wood insert which enhances the newly styled wheel.

B NEEDLE-TYPE FUEL GAUGE

The fuel gauge on all Cadillac cars is new for 1970. It has a new face design and new swing-arm, pivot-type pointer for improved readability. Located on the upper left side of the instrument cluster to the left of the speedometer, it registers only when the ignition is turned on. When the ignition is turned off, the pointer may stop at any position on the gauge. The top mark on the gauge indicates full (F), while the bottom mark indicates empty (E).

C TAMPER RESISTANT ODOMETER

All Cadillacs feature a new tamper resistant odometer with telltale device that provides instant, visual evidence if someone attempts to turn back the mileage reading. The new odometer has the same outward appearance as those previously installed—black number wheels with white numerals. With the new odometer, however, there is a thin black separator between each number wheel that is held in place with a breakable plastic retainer. Should someone try to turn back the mileage reading by forcibly turning the number wheels, the plastic retainer tears and the black separators rotate to show a bright color. This provides clear evidence of tampering.

D RADIO PUSHBUTTONS—ASH TRAY

The pushbuttons on all radios are redesigned for 1970. They are chrome-plated and have small ridges at the point where the finger touches the button, providing greater finger-tip control as well as improved appearance. The AM Band selection button is on the left, while

the FM Band selection button is on the right.

The illuminated, single-chamber ash tray and lighter unit is modified slightly for 1970 to provide for improved accessibility. When the ash tray has been opened fully, it tilts downward almost ½" for the convenience of the driver and center passenger. The snuffer is relocated on the forward edge of the ash receiver.

E WINDSHIELD ANTENNA

Another new feature for 1970 is the concealed radio antenna, embedded in the windshield. Two fine copper wires .005 of an inch in diameter (exaggerated in the picture for the sake of clarity) are sandwiched between the two layers of the windshield glass and are barely perceptible from either inside or outside the vehicle. The small wires appear as inverted "L's" and join together to form a common lead-in wire at the lower, center portion of the windshield. Special noise suppression devices block out distracting noises to provide excellent reception. The outstanding exterior lines and appearance of the Cadillac are enhanced significantly by the elimination of a fender-mounted antenna. Comes on all Cadillacs even though a radio system might not be ordered.

ELDORADO 8.2 LITRE ENGINE

The Fleetwood Eldorado for 1970 has a new engine, the largest passenger car engine in the automotive industry. It was designed for the Eldorado owner who derives pleasure and satisfaction from the performance characteristics of a brawny power plant, yet at the same time desires a disciplined engine for everyday transportation. The basic difference between this 500 cu. in. or 8.2 litre engine and the 472 cu. in. engine that powers all other Cadillac motor cars for 1970 is the increased displacement. This was achieved by lengthening the stroke of the crankshaft and reducing the head height of the pistons. This method has a more favorable effect on exhaust emission control than boring out the cylinders. The Eldorado owner is certain to appreciate the lively response of this impressive performer, whether motoring serenely on the turnpike or maneuvering deftly in city traffic. More on this great engine can be found in Section F.

CADILLAC SAFETY FEATURES

Ever since Cadillac motor cars have been on the streets and roads of America, the vital aspect of safety for the driver and passengers has been foremost in the minds of the people at Cadillac Motor Car Division. They spend countless man-hours in the laboratory and millions of miles on the track engaged in test programs designed to check the structural integrity and safety of the various automobile components. Some of their results can be seen in this impressive list of occupant protection, accident prevention and anti-theft features that are standard on all 1970 Cadillacs.

Occupant Protection

Seat belts with pushbutton buckles for all passenger positions
Shoulder belts with pushbutton buckles—driver and right front passenger
Two front seat head restraints
Energy absorbing steering column
Passenger guard door locks with forward mounted lock buttons
Safety door latches and hinges
Folding seat back latches
Energy absorbing padded instrument panel and front and intermediate seat back tops
Contoured windshield header (except convertibles)
Thick laminate windshield
Padded sun visors
Safety armrests
Safety steering wheel
Fuel tank impact security
Padded or yielding windshield pillar moldings

Smooth contoured door handles
Two front seat belt retractors
Power windows wired through ignition switch

Accident Prevention

Side marker lights and reflectors
Parking lamps that illuminate with headlamps
Four way hazard warning flasher
Backup lights
Lane change feature in direction signal control
Windshield defrosters, washers and triple speed wipers
Wide view inside day/night mirror (vinyl edged, shatter resistant glass & deflecting support)
Outside rear view mirror
Bias belted fiberglass tires & tire tread wear indicators
Dual master cylinder brake system with warning light
Starter safety switch
Dual action safety hood latches
Safety wheel rim
Self-adjusting brakes & corrosion resistant brake lines

Anti-Theft

Anti-theft ignition key warning buzzer
Anti-theft steering column lock
Multiple key combinations
Visible vehicle identification
Tamper resistant odometer with telltale feature

ENGINEERING FEATURES

The Cadillac bumper undergoes a lasting six-step chrome plating process for added luster and durability. In the polish and plating departments, where perfection is more important than time, workers painstakingly polish the bare metal. The bumper is then dipped in a copper solution bath and an electrical charge fuses the copper to the bumper. Taken out of the bath, the bumper is buffed to a high luster. Nickel plating and chrome plating take place in the same manner.

Engine.....	F-1, 2, 3, 4
Transmission.....	F-5, 6

THE ELDORADO 8.2 LITRE ENGINE

Largest In The Industry

This is the brand new Fleetwood Eldorado engine, the largest passenger car engine in the industry. It displaces 500 cu. in. or 8.2 litres and develops an effortless 400 horsepower and an uncomplaining 550 pounds-foot of torque. These are impressive figures to be sure, but there is much more to recommend this engine than size alone.

The Cadillac engineers felt that a car as fine and exclusive as the Eldorado deserved an engine equally as fine and exclusive. The performance-proven 472 cu. in. V-8 engine that has powered all Cadillac motor cars for the past two years and met with such a high degree of owner acceptance was the ideal engine from which to work. The engineers set about their task. They increased the displacement of the 472 engine, not by the conventional "bore-it-out" method, but through the more refined approach of lengthening the stroke of the crankshaft and reducing the head height of the pistons. They selected this unhurried, painstaking route because of its more favorable effect on exhaust emission control.

The final product of the Cadillac engineers' ingenuity and skill was a champion-sired engine designed for the Eldorado enthusiast who derives a great deal of pleasure and satisfaction from the action-packed performance of a brawny power plant, yet at the same time desires a disciplined engine for everyday driving convenience. This engine is equally at home pushing the Eldorado swiftly through the speed range or moving it deftly through city traffic.

The Eldorado 8.2 Litre engine injects a new, youthful spirit into the Eldorado. A new era of personal luxury car ownership is beginning. The exciting particulars of this engine as well as the 472 engine are detailed on the following pages.

QUADRAJET CARBURETOR

This four-barrel carburetor is used on both 1970 Cadillac engines and is engineered to combine sensational performance with economy and smooth operation. There are two stages of operation. The primary side has two small barrels that provide the precise air-fuel mixture at idle and economy operating ranges to give smoothness, positive response and fuel economy. The secondary side has two large barrels to supplement the air-fuel mixture from the primary or small barrels. These large barrels along with the small primary barrels, come into play when the accelerator is depressed, such as in passing. A new choke provides improved cold engine starting and driveaway during the warm-up period.

FUEL PUMP

The fuel pump for 1970 is of the same simplified design as last year's. The large fuel reservoir and large $\frac{3}{8}$ " diameter fuel line connecting the pump to the carburetor provides a smooth, even flow of fuel to the carburetor for outstanding resistance to vapor lock. The fuel filter, an integral component of the fuel pump, is mounted inside the pump at the outlet opening. It filters out dirt particles in excess of approximately .002 of an inch in diameter.

CRANKSHAFT AND PISTONS

The sturdy, dynamically balanced crankshaft for 1970 is of a cast nodular iron design supported by five main bearings of steel-backed aluminum and steel-backed babbitt construction for good anti-friction qualities. Lightweight, cast aluminum pistons provide smooth

engine operation under all driving conditions. Piston heads are contoured to increase turbulence for more complete combustion. The top compression rings are molybdenum-coated for longer wear characteristics. The oil ring is chrome plated for long life and better high-mileage oil economy. The Eldorado engine has a new, longer stroke crankshaft and new pistons with reduced head height. This results in the increased displacement of the Eldorado 8.2 Litre engine.

CYLINDER HEADS

The 1970 cylinder heads used in both of the Cadillac engines are of a lightweight cast iron design with individual inlet and exhaust ports for each cylinder in a configuration that allows for optimum induction and exhaust flow characteristics. Generous passages around the spark plugs, valves and valve guides help assure proper cooling to extend their life span.

VALVE TRAIN AND CAMSHAFT

The valve train plays one of the key roles in the smoothness of the Cadillac engines. Overhead valves, push rods and rocker arms are all designed for smoothness, quietness and long life. Hydraulic valve lifters are used to maintain zero operation clearance throughout the valve train for quiet operation and the elimination of valve tappet adjustment. The hardened cast iron camshaft is supported by five steel-backed babbitt bearings and is driven by the crankshaft through a silent timing chain for exceptionally quiet idle and high-speed characteristics. The wide camshaft lobe design assures minimum lobe wear for long camshaft life.

STARTER MOTOR

The Cadillac starter motor is especially designed for quietness, long life and a high, sure-fire cranking speed for extra-quick starts. The solenoid lever is completely

enclosed for maximum wet weather protection and dirt-free operation. An overrunning clutch protects the starter motor from excessive speed when the engine starts.

GENERATOR

Cadillac's high capacity generator is new for 1970. It has a small diameter pulley for increased lighting loads and produces electrical current at all engine speeds to keep the electrical system operating at top strength at all times. Special bearings never have to be lubricated, resulting in greater reliability and longer life. There is a 42-amp. generator for all cars without air conditioning and a 55-amp. generator for all cars with air conditioning. The regulator has hard, gold contact points for better wear characteristics and longer life.

BATTERY

The Cadillac battery has 15 lead plates for retaining electrical energy. Due to the number and size of these plates, there is plenty of power for fast starting, even on the coldest mornings, and ample reserve power for operating all accessories. Separators between the plates are constructed of a poly-vinyl chloride material to offer greater resistance to shorting. The Delco Eye inspection window permits an instant visual check of the electrolyte level without removing the caps. When the level is normal, the "eye" appears black. When the level is low, the "eye" appears off-white, indicating the cells should be filled. A battery hold-down device is designed into the sheet metal and comes with a screw tab theft deterrent.

ENGINE COOLING

The 1970 Cadillac cooling system is of the closed type, designed to maintain efficient operating temperature. A two-quart see-through reservoir of coolant is located on the right side of the radiator when viewed from the front of the car. This feature permits a quick visual check of the coolant level without removing the radiator cap,

thereby discouraging frequent radiator cap removal for coolant inspection and the subsequent loss of coolant due to a pressure release within the system. When the coolant level drops to the ADD mark, one quart ethylene glycol and one quart water should be added to the reservoir, not the radiator.

POSITIVE CRANKCASE VENTILATION SYSTEM (P.C.V.)

Certain hydrocarbons in the fuel fail to burn completely during engine combustion and are discharged into the engine crankcase. The Positive Crankcase Ventilation System is 100% effective in burning these crankcase emissions to help control air pollution. To function properly, the system depends on the PCV Valve (smog valve) which recirculates and burns blow-by gases inside the engine. This valve must be clean in order to maintain efficient engine operation.

CONTROLLED COMBUSTION SYSTEM (C.C.S.)

Also during the combustion process, certain other hydrocarbons in the fuel do not ignite completely and are discharged into the exhaust system. The C.C.S. is highly effective in reducing these undesirable exhaust emissions by altering the combustion process, thereby helping combat air pollution. C.C.S. includes a special air cleaner which incorporates thermostatic control of heated air to the carburetor, a special calibrated carburetor and distributor and related components. Complete effectiveness of the system, as well as full power and performance, depend upon proper engine maintenance.

ENGINE FAN

All 1970 Cadillacs have a new 5-bladed flex fan (7-bladed on the Eldorado). The blades vary their pitch according to the amount of air flowing past them. That is, at low engine speeds, such as during idle conditions,

the blades turn or twist to pull in more air for cooling. At higher speeds, such as during turnpike driving, the blades twist or flex to pull in less air since ram air is mainly used for cooling. The flexible blades of this new fan also help dampen out sounds and vibration of air movements.

CALIFORNIA EVAPORATIVE EMISSION CONTROL SYSTEM

All cars destined for California registration have a new system that controls or, in most instances, prevents the discharge of liquid and vapor fuel from the fuel tank to the atmosphere. As liquid fuel sloshes in the tank during certain vehicle maneuvering or as vapor fuel is released during thermal expansion, it passes into a liquid-vapor separator unit situated just forward of the tank. The liquid is routed back to the fuel tank while the vapor passes through a line to a charcoal filled canister mounted in the engine compartment. The charcoal absorbs and retains the vapor fuel until a purging or cleansing action takes place during engine operation. When the engine starts, the vapor fuel is drawn through a line to the air cleaner and into the carburetor where it is burned during the combustion process. This evaporative emission control system also includes a new filler cap with improved gasket to assure a more positive seal at the filler pipe end.

EXHAUST SYSTEM

The exhaust system for 1970 allows the Cadillac engine to operate at peak efficiency. It incorporates an exhaust pipe, intermediate pipe, muffler, resonator and tail pipe. The combustible gas from the engine flows through the cast iron exhaust manifold into the large diameter steel exhaust pipe. This waste gas then passes through the exhaust system, including the muffler and resonator, before being discharged into the atmosphere at the rear of the car. (See p. F-18 for Eldorado exhaust system.)

TURBO HYDRA-MATIC TRANSMISSION
DRIVE LINE
CONSTANT VELOCITY UNIVERSAL JOINTS

A TURBO HYDRA-MATIC TRANSMISSION

The Cadillac Turbo Hydra-Matic transmission is engineered expressly to provide the Cadillac driver with the unbeatable combination of instant, smooth response, versatility and dependability. It is a three-speed, fully automatic unit consisting primarily of a torque converter and fixed stator. The converter and stator multiply engine torque during acceleration in any gear (low, intermediate, high). A major advantage of the three-speed Turbo Hydra-Matic transmission is the fact that it delivers correct torque multiplication under all driving conditions. This is especially helpful in slow-moving traffic where low-speed acceleration and deceleration are the rule. This versatility is provided by two Drive Ranges and one Low Range.

LEFT DRIVE position. This is the recommended position for all normal forward driving as it gives the Cadillac driver the maximum in economy, quietness and slower engine speeds. At the same time, however, there is ample acceleration reserve. By depressing the accelerator pedal to the floor, a lower gear is engaged for quick highway passing.

RIGHT DRIVE position. This position corresponds to second gear as it locks out high gear. It is used to good advantage in mountainous terrain for uphill pulling and downhill holdback on medium grades.

LOW DRIVE position. By engaging first gear only, this position offers maximum engine acceleration and deceleration. It is especially useful on short, steep grades and in stop-and-go traffic.

B CADILLAC DRIVE LINE

Cadillac's one-piece tubular steel propeller shaft or drive-shaft (two-piece on 75 models) transmits the flow of power from the transmission to the rear axle. This durable shaft is attached to the transmission by means of a heavy, high capacity slip yoke to help make the power transfer smooth and quiet.

C CONSTANT VELOCITY UNIVERSAL JOINTS

Additional smoothness in the power transfer operation comes from the constant velocity universal joints. The one-piece propeller shaft requires two universal joints, one mounted at each end of the shaft. On 75 models, three universal joints are required because of the two-piece shaft. These universal joints, permanently lubricated, help transfer power to the rear axle smoothly and quietly, with no vibration. They are constructed and installed with the advantage that each offsets any vibration-setting tendencies of the other.

SAFETY RIM WHEEL
BELTED BIAS TIRES
ENERGY-ABSORBING STEERING COLUMN

A SAFETY RIM WHEEL

The Cadillac steel wheel is a functional component of the vehicle. It incorporates a second safety bead retainer for added assurance of the tire remaining on the rim in the event of sudden deflation.

B BELTED BIAS TIRES

Tires for 1970 are the L-78-15 size tubeless of bias belted construction for increased tread mileage and puncture resistance and more responsive handling during braking and acceleration. Built-in tread wear indicators help the driver judge when the tires are worn to the point of needing replacement. These indicators are molded into the bottom of the tread grooves and appear as 1/2" wide bands when the tire tread depth is worn down to 1/16 of an inch.

C ENERGY-ABSORBING STEERING COLUMN

The steering column used on all Cadillacs is the energy-absorbing type. The outer jacket is constructed of two tubes of different diameters joined together by double rows of ball bearings. In the event of severe impact, the ball bearings roll along the wall of the jacket, allowing the smaller, lower tube to collapse within the larger, upper tube. This collapsible feature permits the steering column to telescope up to 8 1/4" upon severe impact, thereby lessening the chance of injury to the driver. When a force is applied to the front or gear end of the column, the column collapses upward. When a force is applied to the rear or steering wheel end of the column, the column collapses downward. In addition, the steering wheel is padded for increased driver protection.

FRAME

FRAME

The 1970 Cadillac frame is of the swept torque-box perimeter type. This means that the frame is of fully boxed construction and completely encircles the passenger compartment for maximum body-to-frame strength and structural rigidity. Front and rear crossmembers give increased strength and added impact protection. Soft, rubber cushions at body-to-frame mounting points contribute to Cadillac's famed silent ride.

FRONT SUSPENSION

Cadillac's independent spring-type front suspension for 1970 is marked by another industry FIRST for Cadillac. Use of the integral ductile iron steering knuckle culminates a development program started over seven years ago to improve the reliability of the steering knuckle as a result of anticipated vehicle weight increases. The high degree of reliability is achieved in two ways. First, the steering knuckle, steering arm and brake caliper support are consolidated into a single integrated component. Secondly, the material used is nodular or ductile iron made by the casting process and further strengthened by an additional heat-treat operation. Other suspension components include helical-coil springs to give a uniform ride, rubber bushings to cushion road noise and strut rods that permit a momentary rearward deflection of the wheel when it encounters a road irregularity for a softer ride.

REAR SUSPENSION

Cadillac's proven four-link rear suspension has two upper control arms angle-mounted high on the rear axle to help reduce sideways motion, roll on curves, acceleration squat and deceleration dive. The two lower control arms connect the rear axle and frame for proper wheel alignment and ride stability under a variety of road conditions. Steel helical-coil springs are mounted directly over the rear axle and, with a low spring rate, provide a well balanced ride. Thick rubber insulation at control

arm-to-frame mountings and at top and bottom of springs absorbs and isolates road noise.

SHOCK ABSORBERS

Cadillac shock absorbers are an integral component of the suspension system and contribute tremendously to Cadillac's luxurious ride and outstanding handling. They are of the direct acting, permanently sealed type incorporating an inert gas sealed inside a nylon envelope, a concept pioneered by Cadillac. This inert gas is used in place of the air in some conventional shocks because it eliminates aeration or foaming (air mixing with the fluid) which causes the shocks to lose their effectiveness and contribute to poor stability, cornering and extra wear on suspension and wheel parts. Both front and rear shocks are specially calibrated to make shock absorption smooth and easy. They are also designed to give uniform action in a variety of climates.

REAR AXLE

The rear axle has been completely redesigned for 1970 to provide greater load carrying capacity and quieter gear set operation. New, extended-life wheel bearings contribute to the durability of the rear axle. The rear axle pinion seal has a two-lip design, the outer lip sealing out dirt, the inner lip sealing in lubricant.

VARIABLE-RATIO POWER STEERING

Variable-ratio power steering affords virtually effortless handling in getting into and out of tight places. While there is a reduction in steering wheel movement for all maneuvering, there is a major reduction in the number of steering wheel revolutions necessary to turn the front wheels lock-to-lock. This relieves the driver of most of the steering effort, yet he is still able to maintain the reassuring "feel" in the steering wheel. In this respect, then, variable-ratio power steering makes steering easier with more positive handling and better maneuverability. Standard on all models except the Seventy-Fives which use a fixed-ratio power steering system.

RUBBER CUSHIONED COUPLING AND BUSHINGS

Cadillac's smooth, almost effortless, finger-tip steering is further aided by the use of a flexible rubber coupling in the steering column and rubber bushings at steering gear-to-frame mountings. This helps absorb road shocks and vibration before they reach the steering wheel.

CADILLAC TRIPLE BRAKING SYSTEM

- A. The independent front and rear hydraulic braking system, pioneered by Cadillac, incorporates separate fluid reservoirs, pistons and hydraulic lines for each system. Should a malfunction occur in the front system, the rear system will still function. Likewise, should a malfunction occur in the rear system, the front system would still function. A red telltale light on the instrument panel alerts the driver to any malfunction.
- B. The power brake vacuum booster utilizes engine vacuum to reduce the braking effort.
- C. The parking brake is foot-operated and may be used under emergency conditions as an auxiliary braking system. It may be applied and released without locking when the car is in any drive range with the engine running.
- D. Corrosion-resistant brake lines and rayon cord brake hoses assure increased durability and long life.
- E. Cast iron-steel rear brake drums are finned for fast heat dissipation. A flange on the rear brake backing plate shields interior of drums from water. Rear brakes adjust automatically when the car is in reverse and the brakes applied. Wheel cylinder pistons are self-lubricating for maximum reliability and long life.
- F. Front disc brakes have a ventilated disc with center openings that allow air to flow past the braking surface and brake pads for extremely rapid cooling. A shield protects the inboard disc and brake pads against road splash. The wheel envelopes the outboard disc and pads to complete the shielding. Front disc brakes adjust automatically during braking.

ENTRY AND EXIT SIDE GUARD BEAM DOOR LOCKS AND LATCHES

A ENTRY AND EXIT

Unmatched freedom of movement when entering and leaving the automobile is the result of Cadillac's incomparable design and engineering. The wide-opening, forward hinged doors, low door sills and rounded cushion corners make access to the spacious and relaxingly comfortable interiors easy and convenient. Additional ease of entering and leaving is afforded the driver when the optional Tilt and Telescope Steering Wheel is ordered.

B SIDE GUARD BEAM

The 1970 Cadillac standard body utilizes heavy-gauge steel, welded construction and a structural reinforcement system to further strengthen the passenger compartment against side impact forces. A double-walled, box-shaped steel beam is welded horizontally inside each door to distribute the impact force over a larger area, thereby decreasing the possibility of injurious objects intruding into the passenger compartment during a collision. Additional reinforcement in the lower door pillar area contributes further to increased structural rigidity.

DOOR LOCKS AND LATCHES

The solid construction, easy-action Cadillac doors with passenger-guard door locks are engineered to lock tightly. Once the doors are locked, the inside door handles are disengaged and will not open the doors until the door lock knobs are returned to the up position manually, by power door lock switch or by outside key. Latches incorporating an interlocking feature resist door opening during severe impact or stress. This helps increase the probability of keeping the passengers within the car in the event of a collision.

LUGGAGE COMPARTMENT
HOOD LATCH
VENTILATION SYSTEM
(NON A/C CARS EXCEPT ELDORADO)

A LUGGAGE COMPARTMENT

The luggage compartment is easily accessible for loading and unloading luggage, sports equipment, garden supplies and other items. The spare tire and wheel and jack components are mounted forward on the trunk shelf (forward on the floor in Convertible and Seventy-Five models), freeing the trunk space nearest the bumper for convenient placement of items. A light shines automatically when the lid is raised, freeing both hands for easier loading and unloading of luggage at night.

The spare tire and wheel cover helps protect luggage and other items from becoming marred. It also provides some protection for the spare tire and wheel itself. The cover slips on and off easily and helps dress up the luggage compartment. Standard on the Sixty Special and Brougham, optional on all other models.

The recessed hinges provide additional protection for luggage and other items the owner may not wish to have marred. Other protective features include a lining on the floor of the compartment and a rubber seal around the lid to keep out damaging dust and water. The lid is counterbalanced for easy opening and closing.

B HOOD LATCH

The dual-action safety hood latch holds the hood panel securely shut. To raise the hood, simply release the lever that is easily accessible between the grille and hood panel, just to the right of center when viewing the car from the front. The hood panel will pop up slightly but will not open further without releasing the secondary

latch. Further movement of the lever will release the secondary latch, allowing the hood panel to be raised completely.

C VENTILATION SYSTEM (NON A/C CARS EXCEPT ELDORADO)

An upper and lower level ventilation system provides quiet, draft-free air circulation with the windows closed. Air for the system is taken in at the base of the windshield. This air is discharged into the passenger compartment through grilles located in the instrument panel (upper level) and in the cowl trim panels (lower level). Control knobs for the dual level ventilation system are located on the cowl trim panels. The upper knob controls air flow through the instrument panel grilles. The lower knob controls air flow through the cowl trim panel grilles. Instrument panel air outlets have adjustable louvers to provide for greater air distribution.

DUAL COMPARTMENT AUTOMATIC CLIMATE CONTROL
SEPARATE REAR COMPARTMENT AIR INTAKES
REAR COMPARTMENT HEATING AND COOLING OUTLETS
FLOOR INSULATION
SCIENTIFIC SOUNDPROOFING

A DUAL COMPARTMENT AUTOMATIC CLIMATE CONTROL

The driver and rear compartment passengers of the Seventy-Five Sedan and Limousine may enjoy motoring comfort throughout the year at different temperature levels if they desire. Separate controls for the front and rear compartments provide driver and rear passengers with selected interior temperatures. The lower illustration on the left shows the controls and positions (no VENT position with dual system) for the driver compartment. See page C-4 for operation. The upper illustration on the left shows the temperature dial and OFF-ON switch that is mounted beneath a hinged cover in the right rear armrest. With these separate rear controls, comfort is maintained automatically to the individual requirements of front and rear compartment passengers.

B SEPARATE REAR COMPARTMENT AIR INTAKES

Since the Automatic Climate Control System for the front and rear compartments of the Seventy-Five Sedan and Limousine operate independently of each other, a completely separate rear system consisting of a heater, blower and evaporator assembly is located in the trunk. Outside air for the rear system is drawn in through the special inlets located high on the rear of the body. The rear window de-fogger is integral with the rear system.

C REAR COMPARTMENT HEATING AND COOLING OUTLETS

During cool weather, warm air is directed into the rear compartment of the Seventy-Five Sedan and Limousine through special grilles located beneath each rear door armrest. During warm weather, cool, de-humidified air is

directed into the rear compartment through the grilles located overhead. There are a number of small openings that diffuse the cool air evenly. In addition, a hinged door that is integral with the outlet grille may be opened to direct air toward the rear passengers.

D FLOOR INSULATION

Four layers of selected materials insulate the front compartment against heat, cold, noise and drafts, thus contributing to driver and passenger comfort. Two layers of jute and a layer of carpeting are used in the rear compartment. The four layers used in the front compartment are:

1. Carpeting
2. Jute
3. Rubber Compound
4. Jute

E SCIENTIFIC SOUNDPROOFING

The quietness of Cadillac interiors is achieved through the Cadillac engineers' constant efforts to design-out any engine or chassis vibrations. However, the distracting noise of thrown gravel and other vehicles' horns cannot be engineered out. Therefore, selected soundproofing is used at strategic places. Added quietness is assured by insulation in rear quarter panels to reduce tire noise. A rubber compound sound barrier is also used at each side of the cowl. Under-the-hood insulation includes 1½" of fiberglass and a one-piece sound barrier between engine and passenger compartments. A layer of felt deadener and a layer of tuflex insulation is used between the steel top and headlining. Soft, durable rubber seals for door, window and trunk are used to insulate against damaging moisture and dust as well as to minimize wind noise.

ELDORADO FRAME
ELDORADO FRONT SUSPENSION
ELDORADO REAR SUSPENSION

A ELDORADO FRAME

The Eldorado frame is specially designed to fit the structural requirements of its front wheel drive. The frame is of a fully boxed design completely encircling the passenger compartment and ending at the rear seat location. A sub-frame integral with the body is used at the rear to meet structural requirements. This subframe, combined with front wheel drive, permits taking maximum advantage of space at the rear of the car for the trunk. Crossmembers give the frame additional rigidity. Soft, durable rubber body mounts provide substantial structural isolation. These cushions of rubber also contribute to the Eldorado's silent ride.

B ELDORADO FRONT SUSPENSION

The front suspension on the front wheel drive Eldorado dictates the choice of torsion bars rather than the conventional coil springs. This suspension method contributes to the excellent handling ease and road control Eldorado drivers experience and appreciate. The front of the torsion bars fit into connectors on the lower control arms. The rear portion of the torsion bars are anchored in an adjustable arm of the torsion bar crossmember. This crossmember is isolated from the frame by soft cushions of durable rubber.

C ELDORADO REAR SUSPENSION

The rear suspension on the Eldorado is provided by tapered, single leaf, semi-elliptical springs, a drop-center, beam-type rear axle and four Cadillac shock absorbers. Two shock absorbers are mounted horizontally to help dampen the rear axle and two are angled vertically for increased stability. In addition, automatic level control is provided as standard equipment on the Eldorado. Thus, the unbeatable combination of single leaf springs, precisely positioned and tailored shock absorbers and the load leveling characteristics of automatic level control provide positive ride control and stability under a variety of load and road conditions.

ELDORADO FRONT WHEEL DRIVE

In order to transmit driving torque to the front wheels, it is necessary to reverse the flow of power coming off the engine crankshaft. Dividing the transmission accomplishes this reverse power flow. The converter is connected directly to the engine crankshaft. A chain drive connects the converter to the rest of the transmission which points toward the front of the car. The chain drive turns the power flow around, transmitting power from the converter to the gear section of the transmission. Power then flows to the final drive unit which performs the differential function in rear wheel drive cars. Here, torque is multiplied and delivered to the left and right axles, completing the power flow from the engine to the front wheels.

ELDORADO STEERING

The outstanding maneuverability afforded by variable-ratio power steering in conjunction with the tremendous traction of front wheel drive provides the Eldorado driver with quick steering response and excellent road control. A wide tread, 63.5" front, 63" rear, and suspension with high roll resistance assure a straight running, easy handling, elegant Cadillac ride in virtually any type of driving terrain.

ELDORADO EXHAUST SYSTEM

The Eldorado exhaust system is essentially the same as for all Cadillacs. Due to the exclusive frame and front wheel drive design of the Eldorado, however, the exhaust system is tailored specifically to this fine automobile. The distinctive features are dual exhaust pipes leading from the engine to the large muffler that is positioned across the car behind the rear axle. A single pipe then leads to the resonator with a short tailpipe directly behind the resonator pointing rearward that discharges exhaust gases into the atmosphere at the rear of the car. The entire system is precisely tuned to help exact the full performance potential as well as a distinctive performance sound from the new, larger Eldorado engine.

**ELDORADO FLAT FLOOR—
FRONT, REAR AND LUGGAGE COMPARTMENT
ELDORADO REAR VENT WINDOWS
ELDORADO VENTILATION SYSTEM (NON A/C CARS)**

A ELDORADO FLAT FLOOR— FRONT, REAR AND LUGGAGE COMPARTMENT

The Eldorado's front wheel drive eliminates the transmission hump and drive shaft housing found in rear wheel drive cars, thereby providing a perfectly flat floor in both the front and rear compartments for unrestricted leg room and increased passenger comfort and convenience. Vertical mounting of the spare wheel and tire in the forward portion of the luggage compartment, along with the jack components, means a flat, spacious, unobstructed, capacity-carrying luggage compartment that Eldorado owners appreciate during vacation travel.

B ELDORADO REAR VENT WINDOWS

The clean, simple lines of the rear quarter vent windows contribute to the Eldorado's overall distinctive styling and looks. The windows are power operated and retract straight rearward into the upper rear quarter or sail panel when they are opened. Individual control switches for the rear quarter vent windows are situated beneath the windows for convenient rear passenger use. Master control switches for the driver are located on the left door trim pod.

C ELDORADO VENTILATION SYSTEM (NON A/C CARS)

Every Eldorado, whether equipped with air conditioning or not, comes with a complete system of air conditioning ducts and outlets. Eldorado's without air conditioning have a ventilation system that draws in air at the base of the windshield. This air is discharged into the passenger compartment through ventilation outlets on the instru-

ment panel and cowl trim panels. Adjustable louvers on the instrument panel outlets direct the air flow as desired. Ventilation outlets in the cowl trim panels are individually adjusted by a pull knob under each end of the instrument panel. The circulating air is routed under and behind the rear seat and out through two outlets, one on each door lock pillar.

ELDORADO VENTILATION AND HEATING CONTROLS (NON A/C CARS)

The Eldorado ventilation and heating system is operated by three horizontally moveable switches located on the instrument panel just to the left of the steering column. One switch turns the heater on and off and controls the temperature. A second switch controls the fan speed and the third switch controls the ventilation, heater and defroster. When windshield defrosting or defogging is required in inclement weather, all three switches must be placed in the extreme right setting to clear the windshield.

SPECIFICATIONS AND MILESTONES

Banks of infra-red lights produce temperatures as high as 300° F in specially designed ovens used in baking on the Cadillac color. A precise seven-step application of primer, surfacer and sealer and four color coats together with an intricate reflow process is used to produce the quality and durable Cadillac finish. In the reflow process, the final color coat is sanded with a special lubricant, cleaned and reheated in the oven to such a high temperature that the paint flows smoothly over the surface. Here, a completed car is passing through the re-touch oven at about 200° F. Aluminum covers are used to protect the seams of convertible and vinyl roofs.

1969-1902 CADILLAC MILESTONES

Model Year	Total Production	Engines	Models or Series	List Price (Typical Car)	Wheelbase	Milestones
1969	223,237	V-8	Calais	\$ 5,466*	129.5"	First to introduce a "closed" cooling system. Vented translucent plastic reservoir permits visual check of fluid level without removing radiator cap. New Dual Comfort Front Seat is divided 40% for driver, 60% for passengers. Each of the two portions adjusts individually. New seat belt system with automatic seat belt retractor and "mini" buckles introduced.
		V-8	De Ville	5,936*	129.5"	
		V-8	Fleetwood	6,693*	120.0"	
		V-8	Eldorado	7,092*	133.0"	
		V-8	Brougham Fleetwood 75	10,823*	149.8"	
1968	229,303	V-8	Calais	5,284*	129.5"	New 375 H.P. engine introduced having the largest displacement of any production car engine in the world at 472 cu. in. and with a rating of 525 ft. lbs. of torque at 3,000 rpm's. New engine block machining line installed.
		V-8	De Ville	5,754*	129.5"	
		V-8	Fleetwood	6,574*	120.0"	
		V-8	Fleetwood Brougham	6,867*	133.0"	
		V-8	Fleetwood 75	10,598*	149.8"	
1967	200,000	V-8	Calais	5,215*	129.5"	Cadillac introduces the exciting Fleetwood Eldorado, the only personal luxury car in the world to feature front wheel drive, variable-ratio power steering and automatic level control as standard equipment. This car is produced on a separate assembly line—the first time in the history of Cadillac that cars have been produced on two assembly lines.
		V-8	De Ville	5,625*	129.5"	
		V-8	Fleetwood	6,277*	120.0"	
		V-8	Eldorado	6,739*	133.0"	
		V-8	Brougham Fleetwood 75	10,360*	149.8"	
1966	196,675	V-8	Calais	5,171*	129.5"	First to introduce variable-ratio steering on American cars.
		V-8	De Ville	5,581*	129.5"	
		V-8	Fleetwood Brougham	6,695*	133.0"	
		V-8	Fleetwood 75	10,312*	149.8"	
1965	181,435	V-8	Calais	5,247*	129½"	Cadillac introduces new coaxial resonator exhaust system, new one-piece propeller shaft with two CV (constant velocity) joints, new perimeter frame with pheasant tail, rear engine mount and new Tilt and Telescope Steering Wheel. Cadillac production tops 180,000 reflecting highest owner loyalty in the industry.
		V-8	De Ville	5,666*	129½"	
		V-8	Fleetwood 60S	6,479*	133"	
		V-8	Fleetwood 75	9,746*	149½"	
Type of Cars Produced						
1964	165,959	V-8 "64-62"	5,236*	129½"	Cadillac introduces Comfort Control—First fully automatic year 'round air conditioning-heating system. Cadillac completes multi-million dollar expansion program which includes new Engineering Center, enlarged Manufacturing and Assembly space, multi-level parking facility, complete rebuilding of Administration Building, and conversion of previous Engineering facility to Manufacturing space.	
		V-8 "64-60"	6,388*	129½"		
		V-8 "64-75"	9,746*	149½"		
1963	163,174	V-8 "63-62"	5,214*	129½"	Cadillac First to provide two CV (constant velocity) joints on propeller shaft for maximum quietness and stability.	
		V-8 "63-60"	6,366*	129½"		
		V-8 "63-75"	9,724*	149½"		
1962	160,840	V-8 "62-62"	5,213*	129½"	Cadillac sets new luxury car records with production of over 160,000 cars with 60% Air Conditioned. Cadillac is First to provide Triple Braking system and Cornering Lights.	
		V-8 "62-60"	6,366*	129½"		
		V-8 "62-75"	9,722*	149½"		
1961	138,379	V-8 "61-62"	5,080*	129½"	Pre-packed suspension and steering connections minimize maintenance; increase quietness and durability. Over 50% of all 1961 Cadillac motor cars equipped with factory-installed Air Conditioning.	
		V-8 "61-62"	6,233*	129½"		
		V-8 "61-75"	9,533*	149½"		
1960	142,184	V-8 "60-62"	5,080*	130"	Cadillac introduces to luxury car owners front-fender mounted directional signal indicator lights and an automatically releasing vacuum operated parking brake.	
		V-8 "60-60"	6,233*	130"		
		V-8 "60-75"	9,533*	149½"		

*Manufacturer's suggested retail price at Detroit; does not include optional equipment or state and local taxes.

1969-1902 CADILLAC MILESTONES—Continued

Model Year	Total Production	Type of Cars Produced	List Price (Typical Car)	Wheelbase	Milestones
1959	142,272	V-8 "59-62" V-8 "59-60" V-8 "59-75"	\$ 5,080* 6,233* 9,533*	130" 130" 149½"	Cadillac becomes the only luxury motor car with an owner demand for well over 1,000,000 cars in a single decade.
1958	121,786	V-8 "58-62" V-8 "58-60" V-8 "58-75"	4,891* 6,232* 8,460*	129½" 133" 149½"	Cadillac pioneered Four-Link Rear Suspension adopted as standard equipment with coil springs or (optional at extra charge) air suspension throughout entire line.
1957	146,840	V-8 "57-62" V-8 "57-60" V-8 "57-75"	4,780.96* 5,614.32* 7,439.88*	129½" 133" 149½"	Cadillac introduces the fabulous Eldorado Brougham, a limited production luxury motor car with air suspension as standard equipment. All Cadillac models feature the revolutionary new Cadillac tubular-center X frame.
1956	154,631	V-8 "56-62" V-8 "56-60" V-8 "56-75"	4,291* 5,042* 6,608*	129" 133" 149½"	Cadillac becomes the only car in its price class ever to be rewarded with an owner demand for over 150,000 cars in one year.
1955	140,778 (11 months)	V-8 "55-62" V-8 "55-60" V-8 "55-75"	3,976.70* 4,728.32* 6,186.78*	129" 133" 149½"	Cadillac establishes new production and sales records by building and selling over 140,000 motor cars in 11 months.
1954	96,680 (9 months)	V-8 "54-62" V-8 "54-60" V-8 "54-75"	3,932.70* 4,683.32* 5,874.78*	129" 133" 149½"	Cadillac is First to provide Power Steering as standard equipment on its entire line of cars.
1953	109,657	V-8 "53-62" V-8 "53-60" V-8 "53-75"	3,666.26* 4,304.88* 5,604.34*	126" 130" 147"	Cadillac offers highest horsepower engine ever used in an American production motor car.
1952	90,715 (11 months)	V-8 "52-62" V-8 "52-60" V-8 "52-75"	3,636* 4,270* 5,361*	126" 130" 147"	Cadillac celebrates its Golden Anniversary.
1951	110,340	V-8 "51-62" V-8 "51-60" V-8 "51-75"	3,315* 3,892* 4,887*	126" 130" 147"	Cadillac moves into defense production of tanks in Cleveland without interruption of automobile production.
1950	103,857	V-8 "50-61" V-8 "50-62" V-8 "50-60" V-8 "50-75"	2,866* 3,234* 3,797* 4,770*	122" 126" 130" 147"	Cadillac production exceeds 100,000 cars for the first time in its history.
1949	92,554	V-8 "49-61" V-8 "49-62" V-8 "49-60S" V-8 "49-75"	2,893* 3,050* 3,828* 4,750*	126" 126" 133" 136"	Cadillac's 1 millionth car produced November 25, 1949.
1948	52,706 (9 months)	V-8 "48-61" V-8 "48-62" V-8 "46-60S" V-8 "48-75"	2,647* 2,781* 3,506* 4,471*	126" 126" 133" 136"	Cadillac presented its greatest engineering achievement in 45 years—the new, compact, better performing, more economical, valve-overhead, V-type, eight-cylinder engine for all 1949 Cadillacs.
1947	61,926	V-8 "47-61" V-8 "47-62" V-8 "47-60S" V-8 "47-75"	2,324* 2,523* 3,195* 4,471*	126" 129" 133" 136"	Postwar production reaches over 90% of prewar peak. Cadillac increases fine-car leadership with over 96,000 unfilled orders.
1946	29,194	V-8 "46-61" V-8 "46-62" V-8 "46-60S" V-8 "46-75"	2,176* 2,359* 3,099* 4,298*	126" 129" 133" 136"	Presentation of the 1946 Cadillacs, using the battle-proved Cadillac V-type engine and Hydra-Matic transmission, the only automotive units of this kind to be produced and improved without interruption during the war.
1945	—	—	—	—	Continued production of the world-famous M-24 light tank for distinguished use in European and Pacific theaters. Introduction of the M-19, a potent anti-aircraft gun motor carriage.
1944	—	—	—	—	Cadillac produced the M-24, one of the world's fastest and most maneuverable combat vehicles of its kind. This famous light tank, which served on all battlefronts, was powered by Cadillac V-type engines and Cadillac Hydra-Matic transmissions.

*Manufacturer's suggested retail price at Detroit; does not include optional equipment or state and local taxes.

1969-1902 CADILLAC MILESTONES—Continued

Model Year	Total Production	Type of Cars Produced	List Price (Typical Car)	Wheelbase	Milestones
1943	—	—	—	—	Cadillac-built light tanks and motor carriages contributed measurably to the struggle for victory and peace. Precision aircraft engine parts made by Cadillac helped power America's leading combat planes. Army-Navy "E" award to Cadillac for excellence in production of war equipment.
1942	16,511	V-8 "42-61"	\$ 1,647*	126"	Presentation of the Fortieth Anniversary Cadillacs. Introduction of sealed, ribbed Super-Safe Brakes and All-Weather Ventilation System.
		V-8 "42-62"	1,754*	129"	
		V-8 "42-63"	1,882*	126"	
(Production halted February, 1942)		V-8 "42-60S"	2,435*	133"	
		V-8 "42-67"	2,896*	139"	
		V-8 "42-75"	3,306*	136"	
1941	66,130	V-8 "41-61"	1,445*	126"	First to introduce to the medium price field a motor car of unquestioned prestige without a compromise in quality. First high price car to offer Hydra-Matic, the completely automatic transmission that eliminates the clutch pedal and all gear shifting. Cadillac outsold all makes of cars in both the medium and high price groups.
		V-8 "41-62"	1,495*	126"	
		V-8 "41-63"	1,695*	126"	
		V-8 "41-60S"	2,195*	126"	
		V-8 "41-67"	2,595*	139"	
		V-8 "41-75"	2,995*	136"	
1940	37,162	V-8 "40-50"	1,320*	123"	First to offer custom car interiors at medium price. First to equip passenger cars with Ball Bearing Steering. First to introduce an ultramodern, large, luxurious motor car—the Cadillac Fleetwood 72. During first six months, 1939, Cadillac outsold all makes combined with series having 5 touring sedans priced at or above \$1,300.
		V-8 "40-52"	1,440*	123"	
		V-8 "40-62"	1,745*	129"	
		V-8 "40-60S"	2,090*	127"	
		V-8 "40-72"	2,670*	138"	
		V-8 "40-75"	2,995*	141"	
		V-16 "40-90"	5,140*	141"	
1939	36,611	V-8 "39-50"	1,320*	120"	First to develop and introduce Controlled-Action, greatest advancement in riding comfort and safety since Knee-Action. More than half of all fine cars sold above \$2,000 are Cadillacs.
		V-8 "39-61"	1,680*	126"	
		V-8 "39-60"	2,090*	127"	
		V-8 "39-75"	2,995*	141"	
		V-16 "39-90"	5,140*	141"	
1938	24,950	V-8 "38-50"	1,385*	124"	First to create and introduce a practical motor car of advanced styling. First to engineer and build the 135" V-type sixteen-cylinder engine. A majority public recognition of Cadillac Merit and Advanced Progress is definitely established.
		V-8 "38-60"	1,775*	124"	
		V-8 "38-60S"	2,085*	126"	
		V-8 "38-65"	2,285*	132"	
		V-8 "38-75"	3,075*	141"	
		V-16 "38-90"	5,265*	141"	
1937	46,153	V-8 "37-50"	1,260*	124"	Cadillac-built V-8 proves stamina, dependability and speed of present day stock car by breaking all previous stock car records at Indianapolis Speedway. Delivers at retail hit all-time peak in previous Cadillac history.
		V-8 "37-60"	1,660*	124"	
		V-8 "37-65"	2,090*	131"

		V-16 "90"	7,570	154"	
1935	13,449	Str.-8 "50"	1,545	119"	First and Only fine car equipped with one-piece solid steel Turret Top. For five years, more Cadillacs purchased than any other make of fine car.
		V-8 "10"	2,445	128"	
		V-8 "20"	2,645	136"	
		V-8 "30"	3,295	146"	
		V-12 "40"	3,995	146"	
		V-16 "60"	6,750	154"	
1934	11,856	Str.-8 "50"	1,595	119"	First to introduce today's mode of streamlining. First American car with spare tire concealed within body. First to develop and use Knee-Action Wheels.
		V-8 "10"	2,495	128"	
		V-8 "20"	2,695	136"	
		V-8 "30"	3,295	146"	
		V-12 "40"	3,995	146"	
		V-16 "60"	6,650	154"	

*Manufacturer's suggested retail price at Detroit; does not include optional equipment or state and local taxes.

1969-1902 CADILLAC MILESTONES—Continued

Model Year	Total Production	Type of Cars Produced	List Price (Typical Car)	Wheelbase	Milestones
1933	6,654	V-8 "345-C"	\$ 2,245	136"	First to provide fine cars with No-Draft Ventilation.
		V-8 "355-C"	2,895	140"	
		V-12 "370-C"	3,595	140"	
		V-16 "452-C"	6,250	149"	
1932	8,085	V-8 "345-B"	2,495	136"	First to introduce Super-Safe Headlights, Air-Cooled Generator, Completely Silent Transmission and Full-Range Ride Regulator.
		V-8 "355-B"	3,095	140"	
		V-12 "370-B"	3,795	140"	
		V-16 "452-B"	5,095	149"	
1931	29,781	V-8 "345-A"	2,295	134"	
		V-8 "355-A"	2,795	134"	
		V-12 "370-A"	3,895	140"	
		V-16 "452-A"	5,950	148"	
1930	25,991	V-8 "340"	2,565	134"	First to build a Sixteen-Cylinder Automobile Engine. Later in the year, the V-12 Cadillac was introduced. First to offer a complete line of multi-cylinder cars—all of V-type design. First to use Hydraulic Valve Silencers.
		V-8 "353"	3,695	140"	
1929	40,965	V-8 "328"	2,495	125"	First to adopt Chrome Plating as standard.
		V-8 "341-B"	3,595	140"	
1928	29,572	V-8 "303"	2,685	125"	First to develop and use the Clashless Synchro-Mesh Transmission. First to install Security Plate Glass as standard equipment.
		V-8 "341-A"	3,250	140"	
1927	47,420	V-8 "303"	2,685	125"	First to develop a comprehensive Service Policy and place it on a nationwide basis.
		V-8 "314"	3,250	132"	
1926	20,419	V-8 "314"	3,250	132"	
1925	16,673	V-8 "63"	3,195	132"	First to use Crankcase Ventilation. \$5,000,000 expansion program started. Cadillac contracts for entire output of Fleetwood Custom Body Co.
1924	18,827	V-8 "63"	3,835	132"	First to provide wide choice of Duco Exterior Finishes as standard equipment.
1923	14,707	V-8 "61"	4,150	138"	First to build the inherently balanced 90° V-type eight-cylinder engine. First to use the Compensated Crankshaft. Four-wheel brakes featured.
1922	26,296	V-8 "61"	4,100	132"	First to use Thermostatic Carburetor Control.
1921	5,250	V-8 "59"	4,950	132"	Cadillac completes new Clark Ave., Detroit plant, most modern in the industry.
1920	19,628	V-8 "59"	4,750	125"	
1919	20,678	V-8 "57"	4,090	125"	Cadillac supplied 2,350 cars and 1,157 V-8 artillery tractor engines to U. S. Army.
1918	20,285	V-8 "57"	3,535	125"	
1917	18,002	V-8 "55"	3,110	125"	Cadillac adopted as Standard Officers' car by U. S. Army after grueling tests at Marfa Texas.
1916	18,003	V-8 "53"	2,950	122"	Cadillac becomes "Division of General Motors."
1915	13,001	V-8 "51"	2,800	120"	First to use Tilt-Beam Headlights for night driving safety.
1914	14,002	4 cyl. "1914"	2,800	120"	October—First in this country to offer a production car (1915 Cadillac) with a V-type water cooled, eight-cylinder engine, the prototype of engines later used throughout the industry. First to use thermostatic control of cooling system.
1913	15,017	4 cyl. "1913"	3,250	120"	
1912	13,994	4 cyl. "1912"	3,250	116"	First to equip cars with Electric Starting, Lighting, Ignition, for which Cadillac again was awarded the Dewar Trophy. First and only car in the world to win this award twice.
1911	10,018	4 cyl. "30"	1,800	116"	Custom Coachcraft by Fleetwood Body Company begins.
1910	8,006	4 cyl. "30"	1,600	106"	First to offer Closed Bodies as standard equipment. Less than 10% of cars then produced had closed bodies.
1909	5,902	4 cyl. "30"	1,400	106"	Cadillac purchased by General Motors Corporation. Four-cylinder production increases six times over 1908 production.

1969-1902 CADILLAC MILESTONES—Continued

Model Year	Total Production	Type of Cars Produced	List Price (Typical Car)	Wheelbase	Milestones
1908	2,012	{ 1 cyl. "T" 4 cyl. "H"	\$ 1,000 2,500	82" 102"	First American car to be awarded the Dewar Trophy by Royal Automobile Club of London for being First to achieve interchangeability through standardization of parts.
1907	2,696	{ 1 cyl. "M" 4 cyl. "G" 4 cyl. "H"	950 2,000 2,500	76" 100" 102"	Famous Johansson gauges, First imported into United States by Cadillac, enable Cadillac to become the following year the recipient of the Dewar Trophy.
1906	4,307	{ 1 cyl. "M" 4 cyl. "H"	950 2,500	76" 102"	
1905	4,182	{ 1 cyl. "F" 4 cyl. "D"	950 2,800	76" 100"	First four-cylinder establishes Cadillac as the pioneer of multi-cylinder motor cars.
1904	2,318	1 cyl. "B"	950	76"	Cadillac Automobile Co. and Leland & Faulconer consolidate as "Cadillac Motor Car Company" with Henry M. Leland, grand old man of the industry, as General Manager.
1903 1902)	2,500	1 cyl. "A"	850	76"	Detroit Automobile Co., established 1899, reorganized as "Cadillac Automobile Co."

NEW COLOR CODES

A revised formula for exterior color code numbers has been devised beginning with the 1970 model year.

The principle of this color identification system is similar to Cadillac's previous two-digit numeric coding and grouping by color families. The number of color groups has been increased from 7 to 9 to provide more flexibility, thereby assuring continuity.

In the revision process, some traditional numbers were changed. For example, Black is now Code 19.

Color 49 is now Glenmore Green. Last year this number was Empire Maroon. Special attention is called to this to be sure that Green is not ordered instead of Monarch Burgundy which is now Code 79.

This chart shows the new 1970 numbers and names compared with corresponding 1969 color codes.

1970 CODE	NAME	1969 CODE
11	Cotillion White	12
14	Patina Silver	16
18	Phantom Gray	18
19	Sable Black	10
24	Corinthian Blue	24
29	Condor Blue	26
34	Adriatic Turquoise	28
49	Glenmore Green	36
54	Byzantine Gold	44
59	Bayberry	30
64	Sauterne	42
69	Dark Walnut	46
74	San Mateo Red	48
79	Monarch Burgundy	49

Firemist color codes are not affected by this new system.

The other General Motors divisions have also adopted this system for their production operations. This type of numbering will, therefore, appear on body identification plates of all G.M. cars.

Following are the basic color families and their number range. Firemist colors remain in the 90 series.

CODE NUMBER RANGE	COLOR FAMILIES
10 - 19	Neutrals
20 - 29	Blue
30 - 39	Aqua - Turquoise
40 - 49	Green
50 - 59	Yellow - Gold
60 - 69	Beige - Brown - Bronze - Copper - Orange
70 - 79	Pink - Red - Maroon - Plum - Burgundy
80 - 89	Miscellaneous
90 - 99	Firemist

97	Briarwood	2.88	3.25	7.59	4.41	L68 ND 009 927-99747
99	Chateau Mauve	1.51	2.40	4.60	1.79	L68 PD 007 927-99495

The above percentage figures represent usage of previous model comparable colors. Percentages are omitted for colors without a counterpart; therefore, the totals will not equal 100%. These figures are to be used as a guide only, as they do not reflect regional preference influenced by climatic conditions.

The manufacturer's identification numbers are listed in the column at the right. Inmont numbers begin with L. Eight-digit codes are Dupont. Forbes' codes begin with 8. Forbes does not furnish Firemist colors.

INTERIOR INFORMATION

NUMBER OF TRIM OPTIONS

182 trim options in 12 colors are available for 1970. The trim chart on page 4 lists standard cloth trims and the seat options.

The 90 leather options are listed on page 5.

OPTIONS

The number of options that can be made available in production is limited. Some options are not offered because the demand on certain body styles is limited. An example is White leather with Red carpets on the Sedan De Ville.

SPECIAL ORDER

To prevent a loss of sale due to non-availability of a certain trim, almost any trim combination can be special ordered.

SIERRA GRAIN LEATHER

Inserts and bolsters are in Sierra grain when optional leather is ordered. The texture of this leather is smooth and supple in a dyed through finish.

Leather may be ordered in any style except the "75" styles R and S and Calais, styles G and N. An expanded vinyl in Black or Beige is offered as an option in the Calais.

SEAT TYPES

Definitions to supplement the seat sketches that follow are listed below.

Cushion — The cushion determines the classification of the seat.

Backrest — The backrest is notched or straight across depending upon the trim, body style or seat option.

Bench Seat — The cushion is not divided.

Dual Comfort Seat — The cushion is divided 60% for the passengers and 40% for the driver.

Bucket Seats — Individual seats with a center console.

BENCH SEAT

The Bench Seat is available with and without a notch in the backrest, depending upon the body style and trim. The following are the two categories of the Bench seat.

Coupe Seat

A coupe type seat is notched at the center so that the backrest may fold forward. This seat is used in all two-door cars with both cloth and leather trims.

Sedans with leather trim will have this Coupe type seat, but the backrest will not fold forward.

Sedan Seat

The backrest on a Sedan type seat is straight across without a notch. This type seat is used with cloth upholstery in four door cars.

DUAL COMFORT SEAT

Trim numbers suffixed with S indicate the Dual Comfort Seat. This seat has a notch in the center of the backrest and the cushion is divided 40% for the driver and 60% for the passengers. A full center armrest is attached to the passenger section.

The two seats are individually adjustable. The driver's portion has a two-way power adjuster. The passenger side can be adjusted forward and rearward manually.

Optional seat adjusters are listed on page 18.

Dual Comfort seat: standard on the Brougham P; optional on the De Ville, F, J, B and Fleetwood M.

Dual Comfort seat: not offered on Sedan De Ville, style L, but available on special request. It is not available on Eldorado or Calais.

BUCKET SEATS

Strato type Bucket Seats in Black leather are offered for the Eldorado only.

Bucket Seats are not available on any other body style, even on special order.

A center console, to match the trim, is placed between the two front seats.

CALAIS AND DE VILLE FRONT SEATS

Calais Coupe

Coupe type seat with free-standing center arm rest. Optional vinyl trim style is illustrated. Cloth upholstered cars will have only one flat lace on each side of the center section as illustrated below.

Calais Sedan

Bench type Sedan seat illustrated in cloth trim style with center arm rest. Optional vinyl trim will have three laces on each half of the seat.

De Ville Dual Comfort Seat

Optional with all trims in the De Ville Convertible, Coupe and Hardtop Sedan.

De Ville Coupe

Notch back seat, with folding back rest and center arm rest used in all De Ville two-door cars. Sedans in optional leather will also use this type seat with stationary back rests.

De Ville Sedan

Sedans will have this type of seat with cloth upholstery.

FLEETWOOD FRONT SEATS

Eldorado Strato Bench Seat

Two inch wide pipes are used to achieve this classic trim style. This same styling is used with cloth or optional leather upholstery.

Eldorado Strato Bucket Seats

Available in Black leather at extra charge on the Eldorado only. A center console is included.

Fleetwood Dual Comfort Seat

This styling is used for all trim choices. Dual Comfort Seat is standard on the Brougham and optional on the Sixty Special.

Fleetwood Bench Type Seat

Standard on Fleetwood Sixty Special and Fleetwood "75" Sedan with all trims.

Front seat on "75" Limousine will be Black leather in 2" pleats.

EQUIPMENT

NEW CODES

Each option now has its own code. To avoid duplicate option symbols, some items have been recorded with new letters or numbers. Familiarization with these codes is important to avoid errors in ordering.

ITEMS WITH NEW CODES

A	—	Rear Window De-Fogger	6	—	License Frames — Two
P	—	Rubber Trunk Mat	7	—	Filler Plate
T	—	Remote Control Trunk Lock	R	—	Evaporative Emission Control (California Only)
5	—	License Frame — One			

GROUP CONTENT

Groups 1, 2, 3 and 4 contain:

Radio	Door Edge Guards
White Wall Tires	Automatic Climate Control
Soft Ray Glass	Power Seat Adjuster

New Group 8 is composed of:

Power Door Locks	Rubber Floor Mats
Tilt & Telescope Steering Wheel	Rubber Trunk Mat
Remote Control Trunk Lock	

New Group 9 consists of:

Twilight Sentinel	Cruise Control
Rear Window De-Fogger	Guide-Matic Headlamp Control

The content of groups has been designed to conveniently package those items most frequently ordered by Cadillac customers. Additional items may be ordered by designating the individual code symbol.

Even though certain items in a group are standard or not available on a particular body style, the group may be ordered.

CAUTION: Group 1 — do not order on Fleetwood "75" as Stereo Radio is not available for these body styles.

Group 4 — can be ordered for "75" Sedan or Limousine only. Rear Control Radio is not available on any other style.

NEW OPTIONS

A brief description of new and improved options follows.

W	— Tires	— The optional White Wall tires are of Fiberglass Belted Bias construction.
1-2-3-4	— Radios	— All radios have AM-FM tuners. A Signal Seeking device is also included on all radios except code 3, the AM-FM push-button. Radio antenna is sealed in the windshield of the car.
A	— Rear Window De-Fogger	— is now available on all styles including Convertible. De-Fogger is standard on Fleetwood "75" Sedan and Limousine.
P	— Trunk Mat	— A Gray, one-piece, rubber Trunk Mat is available as factory installed option.
C	— Cruise Control	— is vacuum operated with the speed selector in the end of the turn signal lever and by an ON-OFF switch on the instrument panel.
R	— Evaporative Emission Control	— California cars only. Available only on cars destined for initial registration in the State of California. Code R should be specified on such orders only.

OPT – Optional at Extra Charge
S.R. – Special Request

CODE V

This code designates the right side front passenger 6-Way Power Seat Adjuster option on Dual Comfort Seat.

HOW TO ORDER

When a 6-way *passenger* seat adjuster is wanted on a Dual Comfort Seat, a 6-way *driver's* seat adjuster must also be ordered.

Mark both Y and V, or V plus a basic group (which includes Y) on the order form 5600A.

CODE Y

Represents a 6-Way power adjuster (or 4-Way on Eldorado driver's Bucket) for the

following types of front seats:

- 1) Regular Bench.
- 2) Driver's (left side) portion of individually controlled Dual Comfort Seat.
- 3) Eldorado driver's Bucket Seat.

SWITCH LOCATIONS

All front seat adjuster controls are located at lower left side of seat (including "75" cars) except passenger dual comfort and bucket seat control is on right side. All seat switches operate independently of the ignition switch.

TIRES

STANDARD

Blackwall Fiberglass Belted tires, size L78-15, load range B, are standard on all cars except "75" Sedan and Limousine. On "75" cars, the 8.20 x 15 size is carried over.

OPTIONAL

Whitewall tires of the same size are optional. Two narrow white bands accent the sidewall. Order basic group 1 through 4 or specify code W.

FIBERGLASS BELTED TIRES

The construction and configuration of this tire are designed to increase tread wear, improve handling characteristics and make the tire more resistant to road hazards.

This tire is made with two plies of polyester cord body and two fiberglass belts. The two plies of polyester cord and the fiberglass belts are applied on the bias. The first fiberglass belt is as wide as the tread area. The second belt is slightly narrower.

TIRE SIZE L78-15

These new tires are 1 inch wider. In addition, the Fiberglass Belted Bias tire has 9 ribs.

The "L" indicates load carrying ability of the tire. This converts to the 9.00 designation used previously. The "78" is the aspect ratio. This means the height of the tire is 78% of the width.

The "15" is the interior diameter of the tire and the size of the wheel that this tire is mounted on.

To specify a tire brand, use the following codes:

U Uniroyal
F Firestone

G Goodrich
Y Goodyear

ALL MAKES NOT ALWAYS AVAILABLE

Tires for Cadillac cars are supplied by four manufacturers in a variety of sizes, and black or white side walls. This complexity creates storage problems that make a continual inventory of all makes and types difficult to maintain.

Also, availability problems are encountered since all tires must meet the standards of Cadillac's quality control program. It is realized that some customers designate a tire brand preference which dealers understandably wish to accommodate. However, as a relatively small percentage of such requests can be considered without risking a delay in car production, only in case of customer insistence should tire brands be specified on the car order.

Notwithstanding these situations, Cadillac will endeavor to supply a tire brand option, provided such requests do not exceed 5% of a dealer's orders during a model year.

Black side wall tires are standard equipment on all cars. Because of the extremely small demand, it is not feasible to offer a black wall tire brand option even on a limited basis.

CARPETS

Carpets are used for floor covering and for areas on the doors, cowl quarters and lower part of the back of front seat.

Floor carpeting is installed over a layer of padding, providing insulation from noise and temperature.

LIMOUSINE CARPETING

Style S front compartment will have Black carpeting and rear compartment will have carpeting to match color of upholstery selected.

FLOOR CARPETING

Calais: Trenton quality of 80% rayon and 20% nylon loop pile.

All Other Styles: Trianon quality of 100% nylon cut pile.

CARPETING ABOVE FLOOR

Calais: Travana quality of 80% rayon and 20% nylon loop pile.

All Other Styles: Tyrol quality of 100% nylon cut pile.

To order Rubber Floor Mats, specify Equipment Group 8 or code F.

Floor Mats match the upholstery color.

To order a color other than the combination listed on the chart, enter the code number in the Floor Mats column on the 5600A Order Form.

Black Floor Mats will be used when Mauve trim is ordered.

A one-piece Gray Trunk Mat is available for factory installation. Specify Group 8 or Code P.

GENERAL INFORMATION

BODY STYLE REFERENCE

Reference in this book to "C" cars includes the Calais, De Ville and Fleetwood Sixty Special and Brougham.

The Fleetwood Eldorado is referred to as "H".

"R" for the Fleetwood Sedan and "S" for the Fleetwood Limousine are the most common designations for the "75" series.

EXTRA CHARGE

Unless specifically stated otherwise, any reference to option, optional equipment, special request or special feature indicates that this item is available at extra charge.

BODY MOLDINGS

Calais and De Ville series cars will have a bright chrome molding.

A vinyl insert in the body molding is found on all Fleetwood series cars except "75". The molding is bright chrome and the insert will match the color of the padded roof or it will be Black when the padded roof is not specified.

TRIM STYLING

Brougham and Sixty Special

Trim styling for the Brougham and Sixty Special is a departure from the two and three pillow style of recent years.

The cushion is one-pillow with two buttons for accent. The backrest will be two-pillow, the upper pillow being larger.

The lower pillow, when Dumbarton cloth is ordered will be in matching leather. The center section on seat cushion will be Dumbarton cloth. The "bolster" will now be horizontal instead of vertical.

The facings of this leather lower pillow will be in vinyl to match.

With Divan all cloth trim, the two-pillow trim style is used, but leather is omitted.

ELDORADO

Two inch pleats are used with cloth and leather trim selections to achieve a classic trim style.

VINYL ROOFS

There are 7 vinyl roof colors for 1970. In addition to White, Black, Dk. Blue, Dk. Brown and Lt. Beige, two entirely new colors are available. They are Dark Mauve and Dark Bayberry.

The Convertible top is available in five colors. White, Black, Dark Blue, Light Beige and the new Dark Bayberry are the selections.

FIREMIST COLORS

The Firemist options have become exceedingly popular because of customer demand for something unique. Firemist colors are now available in seven colors.

Two entirely new color families are represented in 1970.

Cinnamon is a vibrant orange-gold Firemist.

Nottingham Green Firemist represents the emerald green family.

An optional trim of White leather with Nottingham Green carpets and instrument panel is designed specifically for Nottingham Green Firemist exterior.

Firemist code numbers start with 9 and may be ordered by marking the number in the regular color space on the order form.

GENERATORS

Ampere capacity of generators is as follows:

61 Amp-Air Conditioned Cars
42 Amp-Without Air Conditioning
63 Amp-"75" Cars.

Because of the increased amperage capacity of the standard generator an optional generator is not offered.

GEAR RATIOS

Gear Ratios are the same for both Automatic Climate Control cars and those ordered without air conditioning.

There are no options.

The ratios listed below are for information purposes only.

2.93-1 for "C" Cars
3.07-1 for Eldorado
3.15-1 for "75"

GLASS

STANDARD

Clear solid tempered safety plate glass is standard in all side and rear windows. This includes the rear window on the Convertible.

The windshield on all cars and division glass in the "75" Limousine are laminated safety plate glass. The windshield on all cars will have the impregnated radio antenna.

OPTIONAL, CODE E

Soft Ray glass is tinted and the upper part of the windshield is shaded. In addition to providing relief from the sun's rays, Soft Ray glass aids Automatic Climate Control by screening infra-red heat rays.

Soft Ray glass is recommended, especially when Automatic Climate Control is ordered.

RADIO ANTENNA

The radio antenna is sealed in the windshield glass whether Soft-Ray or clear glass is ordered.

A fine wire is placed across the windshield approximately four inches from the top and

runs down the center to a lead wire connecting the antenna to the radio.

The position of the antenna provides for less distortion in the reception because the lead wire to the radio is shortest at this point.

HEADLINING

COLORS	BEDFORD	TAFFETA	ASCOT
	Cord Vinyl	Perforated Vinyl	Soft Plush All Nylon Tricot Fabric
Black	211 251 311 351	411 451 051	011 711

Dk. Mauve	347	447	047
Med. Red	388	488 088	

HEADLINING

Headlining matches color of seat inserts as illustrated in the above chart.

LANDAU ON "75"

Headlining on "75" Sedans and Limousines ordered with Landau Roof option will have Taffeta perforated vinyl headlining instead of Ascot cloth.

GARNISH MOLDINGS

Windshield pillar moldings, header moldings, rear shelf and rear view mirror bracket match the instrument panel color.

Other garnish moldings and coat hooks match the headlining color.

CONVERTIBLE

The chart below lists the top and liner colors.

CODE	TOP COLOR	LINER
1	White	Black
2	Black	Black
3	Dk. Blue	Black
4	Dk. Bayberry	Black
6	Lt. Beige	Black

SEAT AND SHOULDER BELTS

SEAT BELTS

Seat Belts match the carpet color of trim selected.

Six sets of seat belts are provided in each car—three in front and three in rear.

Auxiliary seats in the "75" do not have seat or shoulder belts.

SHOULDER BELTS

Shoulder Belts also match the carpet color of trim selected.

Two sets of front seat shoulder belts are standard in all closed cars.

Front Shoulder Belts are optional for the Convertible — specify code N.

Rear Shoulder Belts are optional on all body styles and can be ordered by specifying code Z.

STORAGE

A pocket in the front seat is large enough to accommodate Seat Belts and Shoulder Belts when they are not in use.

This feature is found on all cars except the Calais series and the Fleetwood "75" Limousine.

Driver and right front passenger outboard Seat Belts are housed in retractors at the base of the front seat.

Front Shoulder Belts are stored on two convenient metal clips above the front doors.

Rear Shoulder Belts are attached to the rear shelf and are placed there when not in use.

SHOULDER BELT LENGTH

Shoulder Belts come in four lengths depending upon body style and whether used in front or rear seats.

MINI BUCKLES

A smaller buckle is provided for the driver and right front passenger seat belts. This mini buckle provides for easy identification of the most frequently used seat belts. Buckles for other belts are the larger size.

STANDARD COLORS

Shoulder Belts are available in all colors that are standard production option trims.

Non-standard color interiors will require that matching Shoulder Belts be special ordered.

ELECTRIC BACK REST RELEASE

Individual back rests in two-door cars are secured and must be released manually to fold forward. This release is located on the back of front seat on all two-door cars.

Whenever Power Door Locks are ordered on two-door cars, opening of either door electrically releases the seat back locks. Closing the doors secures the back rest latches.

Electric Back Rest Release is an integral part of the Power Door Locks and cannot be ordered separately.

ORNAMENTATION

New ornamentation is used to identify and enhance the interior and exterior of every 1970 Cadillac. Following is a description of the ornamentation and the body styles to which it applies.

INTERIOR

DOOR INSERTS

An Oriental ash-Tamo wood — is used for decorative accent on the doors and rear quarters of all Fleetwood styles and leather upholstered De Villes.

Cloth upholstered De Villes will have cloth door inserts.

Calais door inserts will be vinyl to match upholstery.

INSTRUMENT CLUSTER

Tamo wood is used for the instrument cluster on all cars except Calais which has Black camera grain.

INSTRUMENT PANEL COVE

Cove area above the glove compartment will be Tamo wood on Fleetwood series. Leather upholstered De Ville styles will also have Tamo wood cove area.

Cloth trimmed De Ville cove area will be brushed aluminum and Calais will be Black camera grain.

SERIES IDENTIFICATION

The cove area will contain a plaque with the series identification inscribed.

Fleetwood in coined block letters will be on "75" and Sixty Special. Brougham in script with Fleetwood in coined block letters is used for the Brougham.

Eldorado in coined block letters appears on the Tamo wood cove area.

De Ville in script is on the aluminum or Tamo wood cove area.

Calais in script is on the Black camera grain cove area.

STEERING WHEEL

All steering wheels will be Black with a Tamo wood insert on the rim. Calais rim will be Black.

A crest is on the center pad of all cars. On Fleetwood series, the crest is encircled by a wreath.

EXTERIOR

REAR QUARTERS

Exterior series identification is located on the lower rear quarter or on the sail panel.

A wreath and crest emblem is attached on the rear quarter of the Fleetwood "75" and Sixty Special.

Brougham in script and a wreath and crest appear on the roof sail panels of the Brougham.

The Eldorado rear side marker lights have a red lens with a crest surrounded by a chrome wreath bezel on the lower rear quarters.

Coupe de Ville, Sedan de Ville or De Ville in script will identify the De Ville series.

Calais in script is on the rear quarter of the Coupe and Sedan.

FRONT FENDERS

Brougham and Sixty Special will have Fleetwood in coined block letters on the lower rear portion of the front fenders.

Eldorado in coined block letters will be in the same position on the Eldorado.

HOOD AND REAR DECK

An enlarged version of the Cadillac crest (without the "V") is located on the hood and rear deck of Calais and De Ville.

On Fleetwood series, a crest on the hood and rear deck is encircled by a wreath.

WINGED CREST

A winged crest of brushed metal is attached to the end of the front fenders on all series. This ornamentation gives the front fenders a tailored look.

BODY SIDE MOLDINGS

Fleetwood Eldorado and Brougham will have body side moldings with a vinyl insert that matches the padded roof color. The Sixty Special will have a Black vinyl body molding insert. A Black vinyl insert will also be used when padded roof is not ordered.

All other cars will have chrome spear molding.

ELDORADO — 8.2 LITRE ENGINE

The exclusive Eldorado engine is designated by Eldorado in script and a plaque with the 8.2 Litre inscription on left side of the grill.

LANDAU ROOF

A plaque with Fleetwood in coined block letters is applied on the upper rear quarters when Landau roof is ordered.

CALAIS COUPE

68247

COUPE FRONT SEAT

A notch-back bench type front seat with individual back rests is standard. The back rests fold forward for easy entry and exit.

This is the only type seat available in the Calais Coupe.

CLOTH UPHOLSTERY

Dorian cloth is available in six color options. The cloth is accented by bands of acanthus leaves woven into the fabric, repeating every seven inches. One flat vinyl lace centered on each back rest and cushion will match the seat insert.

VINYL UPHOLSTERY

Sierra grain vinyl is optional in Black or Antique Medium Beige. The seats will have three flat vinyl laces on each back rest and cushion. Other vinyl upholstery colors are available on special request. See page 52.

INSTRUMENT PANEL

The instrument panel colors are listed on opposite page. The instrument cluster inserts are black camera grain texture with Calais in script located on the cove over the glove compartment.

DOORS

Door inserts (the area above the arm rests) are vinyl in color to match the seats.

A red reflective lens is located below the door arm rest.

CENTER ARM REST

A vinyl covered center arm rest is standard in the front (none in rear).

CARPETS

A loop pile—80% rayon, 20% nylon—carpet called Trenton is used for the floor covering. A Travana quality carpet is applied to areas above the floor.

If a trim in a non-standard color is ordered, the carpets will be cut pile Trianon and Tyrol quality.

HEADLINING

A ribbed vinyl (called Bedford) is used for headlining material. It matches the upholstery color, as shown on page 20.

VINYL ROOF

This option not available on the Calais series.

EQUIPMENT

Refer to page 70 for equipment available on the Calais Coupe.

ELECTRIC BACK REST RELEASE

Power Door Locks feature an automatic release of both back rest locks when either door is opened. This permits folding the back rests forward without manually depressing a lock button.

A manual release is standard if Power Door Locks are not ordered.

SEAT AND SHOULDER BELTS

Seat Belts: six sets are standard—three in front and three in rear.

Shoulder Belts: standard in front and optional in rear — code Z.

Seat and Shoulder Belts will match carpet color.

SEAT ADJUSTERS

Two-way manual adjuster is standard.

Six-way power is optional — code Y.

TRUMPET HORN

A high C Trumpet Horn option is available which adds a third horn to Calais cars — code H.

FLOOR MATS

Two-piece front and rear rubber Floor Mats in a color harmonizing with the interior are now included in group 8.

Floor Mat color combinations and codes are listed on page 17.

TRUNK MAT

A one-piece Gray Trunk Mat is available for factory installation. Specify group 8 or code P.

FIREMIST COLORS

Seven beautifully radiant premium charge Firemist colors are available, in addition to the 14 regular option exterior colors.

SPECIAL INTERIORS

Listed on pages 49 through 58 are illustrations of most frequently requested special orders.

CALAIS COUPE

The charts below list upholstery options with exterior color recommendations, in addition to interior material and color distribution.

F DE VILLE CONVERTIBLE

68367

FRONT SEAT

A notch-back bench type front seat with individual back rests is standard.

DUAL COMFORT SEAT

A Dual Comfort notch-back front seat, providing both driver and passenger with choice of seat adjustment for individual comfort, is optional—code S.

SEAT ADJUSTERS

Standard Seat: a 2-way power is standard; a 6-way power is optional—code Y.

Dual Comfort Seat:

Driver—a 2-way power is standard; a 6-way power is optional—code Y.

Passenger—a 2-way manual is standard; 6-way power is optional—code V. However, to order code V, a Y must also be specified.

LEATHER UPHOLSTERY

Sierra grain leather in 10 color combinations is standard in the Convertible.

INSTRUMENT PANEL

The instrument panel colors are listed on opposite page.

Tamo wood inserts are on the instrument cluster, doors and rear quarters. De Ville in script is on the Tamo wood insert in the cove area above the glove compartment.

TOPS

Convertible tops are available in the colors indicated below. Liner colors cannot be changed, as the top material is a fusion of four layers of vinyl, fabric, rubber and drill cloth liner. These are bonded into a one-piece fabric at the mill.

CODE	TOP COLOR	LINER
1	White	Black
2	Black	Black
3	Dk. Blue	Black
4	Dk. Bayberry	Black
6	Lt. Beige	Black

TOP BOOT

The color of top boot matches the color of upholstery and not the top material. Top boots are made of two-way stretch coated fabric except when special colors are ordered.

CENTER ARM REST

Standard bench type front seat or optional Dual Comfort seat includes a folding center arm rest (none in rear).

CARPETS

A fine yarn, all nylon, cut pile carpet called Trianon is used for the floor covering. A Tyrol quality carpet is applied to areas above the floor. A list of carpet colors is on page 16.

EQUIPMENT

Refer to page 70 for equipment available on the De Ville Convertible.

ELECTRIC BACK REST RELEASE

Power Door Locks feature an automatic release of both back rest locks when either door is opened. This permits folding the back rests forward without manually depressing a lock button.

A manual release is standard if Power Door Locks are not ordered.

SEAT AND SHOULDER BELTS

Seat Belts: six sets are standard; three in front and three in rear.

Shoulder Belts: optional in front and rear—code N for front, code Z for rear.

Seat and Shoulder Belts will match carpet color.

FLOOR MATS

Two-piece front and rear rubber Floor Mats in a color harmonizing with the interior are now included in group 8.

Floor Mat color combinations and codes are listed on page 17.

TRUNK MAT

A one-piece Gray Trunk Mat is available for factory installation. Specify group 8 or code P.

CLOTH UPHOLSTERY

Two patterns are offered. The ornate Dynasty cloth is available in Medium Turquoise, Medium Gold and Dark Mauve.

Dubonnet cloth is a subtly striped, smooth knit fabric available in Black, Medium Blue, Dark Green and Medium Beige.

Both fabrics create a soft pillow effect with contour provided by four buttons which tuft the fabric on each back rest.

A center bolster section in leather matches the color of the cloth.

LEATHER UPHOLSTERY

A choice of nine leather color combinations in the Coupe de Ville is offered as standard production options. Inserts and bolsters will be Sierra grain leather.

INSTRUMENT PANEL

The instrument panel colors are listed on opposite page. There are Tamo wood inserts on the instrument cluster.

With leather upholstery, the insert on the cove area above the glove compartment will be Tamo wood. With cloth upholstery, this area will be brush finished anodized aluminum. De Ville in script will appear on these inserts.

DOORS

Tamo wood is used for the door and rear quarter inserts when leather is ordered. Cloth upholstered cars will have cloth in these areas.

A courtesy lamp combined with a red illuminated lens is located below the door arm rest.

CENTER ARM REST

Both front and rear seats include a leather covered folding center arm rest. Applies to either standard bench or optional Dual Comfort seats.

CARPETS

A fine yarn, all nylon, cut pile carpet called Trianon is used for the floor covering. A Tyrol quality carpet is applied to areas above the floor. A list of carpet colors is on page 16.

HEADLINING

A ribbed vinyl (called Bedford) is used for headlining material. It matches the upholstery color, as shown on page 20.

VINYL ROOF

An optional, cross-grain, vinyl roof with textured halo moldings is available in seven colors.

EQUIPMENT

Refer to page 70 for equipment available on the Coupe de Ville.

ELECTRIC BACK REST RELEASE

Power Door Locks feature an automatic release of both back rest locks when either door is opened. This permits folding the back rests forward without manually depressing a lock button.

A manual release is standard if Power Door Locks are not ordered.

SEAT AND SHOULDER BELTS

Seat Belts: six sets are standard—three in front and three in rear.

Shoulder Belts: standard in front and optional in rear—code Z.

Seat and Shoulder Belts will match carpet color.

FLOOR MATS

Two-piece front and rear rubber Floor Mats in a color harmonizing with the interior are now included in group 8.

Floor Mat color combinations and codes are listed on page 17.

TRUNK MAT

A one-piece Gray Trunk Mat is available for factory installation. Specify group 8 or code P.

H

ELDORADO

69347

FRONT SEAT

A Strato bench seat with a notch back is standard. Strato refers to the compact styling of the back rest.

BUCKET SEATS

Strato type Bucket Seats in Black leather with a matching center console are optional.

Bucket Seats in cloth or other leather colors are available on special request. Order illustration is on page 53.

SEAT ADJUSTERS

A 2-way power seat adjuster is standard.

A 6-way power seat adjuster is optional—code Y.

With Bucket Seats, a 2-way power adjuster is standard on both seats. An optional 4-way driver's Bucket Seat adjuster is available—code Y.

Complete seat adjuster information is on page 14.

CLOTH UPHOLSTERY

A double-striped Duplex knit fabric is available in seven colors.

The seats are trimmed in two-inch pleated style. Vinyl is used for the center bolster section. A flat vinyl lace extends across the upper back rest.

LEATHER UPHOLSTERY

Sierra grain leather in eight color combinations is offered as a standard production option. Trim style will be two-inch pleats with a leather center section and a flat vinyl lace extending across the upper back rest.

INSTRUMENT PANEL

The instrument panel colors are listed on opposite page.

Tamo wood inserts are on the instrument cluster and cove area above the glove compartment. A plaque with Eldorado in coined block letters is on this cove area.

DOORS

Both cloth and leather upholstered interiors have Tamo wood inserts on the doors and rear quarters.

A courtesy lamp combined with a red illuminated lens is located below the door arm rest.

CENTER ARM REST

A free standing center arm rest is standard in the front (none in rear).

CARPETS

A fine yarn, all nylon, cut pile carpet called Trianon is used for the floor covering. A Tyrol quality carpet is applied to areas above the floor. A list of carpet colors is on page 16.

HEADLINING

A perforated Taffeta vinyl material in color to match the upholstery is used for the headlining. See page 20 for list of colors.

VINYL ROOF

A padded, cross-grained vinyl roof with textured halo moldings is optional in seven colors.

BODY MOLDINGS

The body side molding is bright chrome with a colored vinyl insert. This insert will match the vinyl roof color. If vinyl roof is not ordered, insert will be Black.

EQUIPMENT

Refer to page 71 for equipment available on the Fleetwood Eldorado.

ELECTRIC BACK REST RELEASE

Power Door Locks feature an automatic release of both back rest locks when either door is opened. This permits folding the back rests forward without manually depressing a lock button.

A manual release is standard if Power Door Locks are not ordered.

SEAT AND SHOULDER BELTS

Seat Belts: six sets are standard three in front and three in rear.

Shoulder Belts: standard in front and optional in rear—code Z.

Seat and Shoulder Belts will match carpet color.

FLOOR MATS

One-piece front and rear rubber Floor Mats in a color harmonizing with the interior are now included in group 8.

Floor Mat color combinations and codes are listed on page 17.

TRUNK MAT

A one-piece Gray Trunk Mat is available for factory installation. Specify group 8 or code P.

FIREMIST COLORS

Seven beautifully radiant premium charge Firemist colors are available, in addition to the 14 regular option exterior colors.

SPECIAL INTERIORS

Listed on pages 49 through 58 are illustrations of most frequently requested special orders.

The charts below list upholstery options with exterior color recommendations, in addition to interior material and color distribution.

488	Med. Red	Sierra	Med. Red	11 14 18 19 74

Choose from the spectrum of seven Firemist colors for added distinction and individuality.

FLEETWOOD SIXTY SPECIAL

M

68069

FRONT SEAT

A bench type front seat with straight-across cushion and back rest is standard.

DUAL COMFORT SEAT

A Dual Comfort notch-back front seat, providing both driver and passenger with choice of seat adjustment for individual comfort, is optional—code S.

Standard bench or Dual Comfort seats are available in either cloth or leather upholstery.

SEAT ADJUSTERS

Standard Seat: a 2-way power is standard; a 6-way power is optional—code Y.

Dual Comfort Seat:

Driver—a 2-way power is standard; a 6-way power is optional—code Y.

Passenger—a 2-way manual is standard; 6-way power is optional—code V. However, to order code V, a Y must also be specified.

Complete seat adjuster information is on page 14.

CLOTH UPHOLSTERY

Two cloth patterns are available.

Dumbarton, a richly textured ornate fabric in Black, Medium Turquoise, Dark Green and Medium Gold, is combined with a matching leather bolster.

Divan, a delicate knit fabric is available in Light Gray, Medium Blue, Medium Beige and Dark Mauve all cloth trim style.

The same trim style will be used for the cloth and leather and all cloth options. On the cloth and leather option, the lower pillow of the back rest will be leather. This horizontal leather bolster will extend across the lower portion of the center arm rest. The center section on the seat cushion will be cloth. This trim style is illustrated on page 11.

LEATHER UPHOLSTERY

A choice of seven leather colors is offered as standard production options. Inserts and bolsters will be Sierra grain. New leather trim style is illustrated on page 11.

INSTRUMENT PANEL

The instrument panel colors are listed on opposite page.

Tamo wood inserts are on the instrument cluster and cove area above the glove compartment. A plaque with Fleetwood in coined block letters is on this cove area.

DOORS

Both cloth and leather upholstered interiors have Tamo wood inserts on the doors.

A courtesy lamp combined with a red illuminated lens is located below each door arm rest.

CENTER ARM REST

Both front and rear seats have a folding center arm rest.

CARPETS

A fine yarn, all nylon, cut pile carpet called Trianon is used for the floor covering. A Tyrol quality carpet is applied to areas above the floor. A list of carpet colors is on page 16.

HEADLINING

Ascot cloth headlining is used with cloth interiors.

Perforated Taffeta vinyl is the headlining material in leather upholstered cars.

Headlining matches upholstery color as shown on page 20.

VINYL ROOF

This option not available on the Sixty Special.

BODY MOLDINGS

The body side molding is bright chrome with a Black vinyl insert.

EQUIPMENT

Refer to page 71 for equipment available on the Sixty Special.

SEAT AND SHOULDER BELTS

Seat Belts: six sets are standard—three in front and three in rear.

Shoulder Belts: standard in front and optional in rear—code Z.

Seat and Shoulder Belts will match carpet color.

FLOOR MATS

Two-piece front and rear rubber Floor Mats in a color harmonizing with the interior are now included in group 8.

Floor Mat color combinations and codes are listed on page 17.

TRUNK MAT

A one-piece Gray Trunk Mat is available for factory installation. Specify group 8 or code P.

FIREMIST COLORS

Seven beautifully radiant premium charge Firemist colors are available, in addition to the 14 regular option exterior colors.

Enjoy the full luxury of Dual Comfort Seat by ordering driver and passenger power seat adjusters . . . specify codes Y and V.

FLEETWOOD SEVENTY-FIVE

R

SEDAN

69723

FRONT SEAT

A bench type front seat with straight-across cushion and back rest is standard without option.

AUXILIARY SEATS

Two forward-facing seats in the rear compartment provide additional seating for three persons. When not in use, these seats fold against the back of the front seat, exposing foot rests for the rear seat passengers.

Auxiliary seats are trimmed in material to match the rear seat. The backs of these seats are covered with a matching coated fabric.

FRONT SEAT ADJUSTERS

2-way power adjuster is standard.
6-way power adjuster is optional—code Y.

CLOTH UPHOLSTERY

Three cloth patterns are available.

Dumbarton, a richly textured ornate fabric in Black, is combined with a matching leather bolster.

Divan, a delicate knit fabric is available in Light Gray, Medium Blue and Medium Beige all cloth trim style.

Decordo, a whip cord fabric in Medium Gray is also offered in the all cloth trim style.

The same trim style will be used for the cloth and leather and all cloth options. On the cloth and leather option, the lower pillow of the back rest will be leather. This horizontal leather bolster will extend across the lower portion of the center arm rest. The center section on the seat cushion will be cloth. This trim style is illustrated on page 11.

INSTRUMENT PANEL

Tamo wood inserts are on the instrument cluster and cove area above the glove compartment. A plaque with Fleetwood in coined block letters is on this cove area.

DOORS

Door and rear quarter inserts will be Tamo wood. A courtesy lamp combined with a red illuminated lens is located below each door arm rest.

CENTER ARM REST

Both front and rear seats have a folding center arm rest.

CARPETS

A fine yarn, all nylon, cut pile carpet called Trianon is used for the floor covering. A Tyrol quality carpet is applied to areas above the floor. A list of carpet colors is on page 16.

HEADLINING

Ascot cloth headlining is used, except code 719 and Landau Roof will have vinyl perforated Taffeta headlining. Headlining matches upholstery color as shown on page 20.

VINYL ROOF

A padded, cross-grained vinyl roof with textured halo moldings is optional in seven colors.

LANDAU ROOF

A padded, vinyl roof with a smaller rear window, blocked in rear quarter windows and the addition of fully chromed Landau bows can be ordered by specifying a Landau roof.

Optional treatments and ordering details are on page 45.

EQUIPMENT

Two independent Automatic Climate Control systems are standard in the "75".

Right-hand outside rear view mirror is featured on this body style.

AM-FM Signal Seeking Radio with rear control is an exclusive option for the Seventy-Five.

Refer to page 71 for equipment available on the Fleetwood "75" Sedan.

SEAT AND SHOULDER BELTS

Seat Belts: six sets are standard—three in front and three in rear.

Shoulder Belts: standard in front and optional in rear—code Z.

Seat and Shoulder Belts will match carpet color.

FLOOR MATS

Two-piece front rubber Floor Mats in a color harmonizing with the interior are now included in group 8.

Floor Mat color combinations and codes are listed on page 17.

TRUNK MAT

A one-piece Gray Trunk Mat is available for factory installation. Specify group 8 or code P.

FIREMIST COLORS

Seven beautifully radiant premium charge Firemist colors are available, in addition to the 14 regular option exterior colors.

SPECIAL INTERIORS

Page 44 contains complete information regarding special interiors in the Fleetwood "75" Sedan.

FLEETWOOD SEVENTY-FIVE LIMOUSINE

69733

S

FRONT SEAT

A bench type front seat with straight-across cushion and back rest is standard without option.

FRONT COMPARTMENT

Limousine front compartment will be Black.

Front seat is Black leather in two-inch pleated trim style.

Door inserts will be Black vinyl.

SEAT ADJUSTERS

A 2-way power adjuster is standard without option, because the division and the front seat are attached to the center pillar.

MAP LAMP

Located in the windshield header molding is a light, similar to rear reading lamps, for the driver's convenience.

INSTRUMENT PANEL

Black instrument panel with Tamo wood instrument cluster and Tamo wood in the cove area is standard. A plaque with Fleetwood in coined block letters is on the cove area.

DIVISION

A division at the center pillar area separates the front and rear compartments. A glass partition can be raised and lowered by controls on the driver's arm rest and on the rear quarter panels.

A Tamo wood insert extends across the upper portion of the division.

REAR COMPARTMENT

The following description of upholstery selections and trim style apply to the rear compartment only.

Three cloth patterns are available.

Dumbarton, a richly textured ornate fabric in Black, is combined with a matching leather bolster.

Divan, a delicate knit fabric is available in Light Gray, Medium Blue and Medium Beige all cloth trim style.

Decordo, a whip cord fabric in Medium Gray is also offered in the all cloth trim style.

The same trim style will be used for the cloth and leather and all cloth options.

On the cloth and leather option, the lower pillow of the back rest will be leather. This horizontal leather bolster will extend across the lower portion of the center arm rest. The center section on the seat cushion will be cloth. This trim style is illustrated on page 11.

CENTER ARM REST

Rear seat only has folding center arm rest.

CARPETS

A fine yarn, all nylon, cut pile carpet called Trianon is used for the floor covering. A Tyrol quality carpet is applied to areas above the floor. A list of carpet colors is on page 16.

HEADLINING

Ascot cloth headlining is used, except code 719 and Landau Roof will have vinyl perforated Taffeta headlining. Headlining matches rear compartment upholstery color as shown on page 20.

VINYL ROOF

A padded, cross-grained vinyl roof with textured halo moldings is optional in seven colors.

LANDAU ROOF

A padded, vinyl roof with a smaller rear window, blocked in rear quarter windows and the addition of fully chromed Landau bows can be ordered by specifying a Landau roof.

Optional treatments and ordering details are on page 45.

EQUIPMENT

Two independent Automatic Climate Control systems are standard in the "75".

Right-hand outside rear view mirror is featured on this body style.

AM-FM Signal Seeking Radio with rear control is an exclusive option for the Seventy-Five.

Refer to page 71 for equipment available on the Fleetwood "75" Limousine.

THIRD KEY

The right rear door has a separate lock and key which allows the rear compartment to be securely locked without using the ignition or luggage compartment key.

SEAT AND SHOULDER BELTS

Seat Belts: six sets are standard—three in front and three in rear.

Shoulder Belts: standard in front and optional in rear—code Z.

Seat and Shoulder Belts will match carpet color.

FLOOR MATS

Two-piece front rubber Floor Mats in a color harmonizing with the interior are now included in group 8.

Floor Mat color combinations and codes are listed on page 17.

TRUNK MAT

A one-piece Gray Trunk Mat is available for factory installation. Specify group 8 or code P.

FIREMIST COLORS

Seven beautifully radiant premium charge Firemist colors are available, in addition to the 14 regular option exterior colors.

SPECIAL INTERIORS

Page 44 contains complete information regarding special interiors in the Fleetwood "75" Limousine.

FLEETWOOD SEVENTY-FIVE

TWO BODY STYLES

When ordering a Fleetwood "75", an examination of the preceding two pages will allow for a comparison of the Limousine and Sedan features.

DRIVER'S CONTROLS

In addition to the standard driving controls, Automatic Climate Control, radio, windows and door locks may all be adjusted from the driver's seat.

Glass division in the Limousine is controlled by a switch on the driver's arm rest.

REAR CONTROLS

The following illustration shows the controls found on the rear quarter Tamo wood panels.

From left to right, the switch positions are:

- Right Rear Window
- Left Rear Window
- Division Glass
- Overhead Reading Lamp

Division glass control will be eliminated on "75" Sedan.

Limousine Power Door Lock Control will be on the right rear door Tamo wood insert. This rear control can lock and unlock all doors. The driver's control will lock all doors, but cannot unlock any door.

Automatic Climate Control and radio controls are on the right rear arm rest under a hinged cover. The Automatic Climate Control adjusts the rear system only.

The rear radio controls, when ordered, will adjust volume and tune stations, overriding the front selector.

SPECIAL ORDERS

Although the Fleetwood "75" offers a rather complete trim selection, at times requests are received for a special interior.

Certain facts must be kept in mind when discussing any deviation from the standard interior in a "75".

SPECIAL HANDLING

In addition to the basic cloth or leather, many other color-keyed components are required to produce a special color Fleetwood "75" interior. These range from injection molded vinyl to thread and buttons.

Most of these special parts must be machine-made on a one-time basis. This means that labor costs for setting up such machines to produce only one or two individual pieces becomes very costly.

PROCUREMENT OF SPECIAL PARTS

For example, medium gold, which is not a standard "75" interior color, will need a pair of air duct grill assemblies for installation in the headlining.

These are molded rubber and to make them in gold, regular production must be interrupted, the machine cleaned, gold compound mixed and two pieces molded.

After these are made, the machine must be re-cleaned for standard colors.

Other such parts that require individual attention are windlace around each door, assist straps on the rear pillars, the small door over the controls in the rear side arm rest, carpets, etc. These items are ordered on an individual basis and require additional time to procure.

EXTRA CHARGE

Because special color items require individual handling, the extra charge for a non-standard color interior in 1969 was in the \$1,900.00 range and necessitated a lead time of 3 to 4 months.

LIMOUSINE FRONT COMPARTMENT

If a color other than Black is desired for the front compartment, specify the color and material desired. e.g., Dk. Blue leather front compartment.

This type of order also requires special handling and additional time, as front compartment components are made in Black only.

CLOTH FRONT AND REAR

In a "75" Limousine S, the same cloth fabric used to upholster the rear compartment may be substituted for the Black leather on the front seat. See page 46 for more details.

LEATHER FRONT IN R

It is not practical to upholster the Sedan front compartment in leather, because the charge would be greater than the price difference between the Limousine and Sedan. And a leather upholstered Sedan (costing more than the limousine) will not include a glass division.

CONCLUSION

If, notwithstanding these lead time and price considerations, a special color interior is to be ordered, please advise immediately the specifications wanted so that the ordering procedure may be started.

LANDAU ROOF

To add a distinctive formal appearance to the Fleetwood "75", a Landau Roof option is offered. This treatment includes blocking in the rear quarter windows, padding and covering the roof with vinyl, reducing the size of the rear window and attaching fully chromed Landau bows on the rear quarters.

TO ORDER

"O" for top code in the standard option area. Specify "Landau Roof 2". The code number that follows is the color of the Landau roof. Color codes are the same as those for vinyl roofs.

SMALL REAR WINDOW

Small trapezoid rear window size is approximately:

Width at top 20"
 Width at bottom 22"
 Height 8-3/4"

OPTIONS

Landau Roof features may be altered by specifying:

1. Omit Landau Bows or
2. Retain regular rear window size.

HEADLINING

Taffeta perforated vinyl headlining is used with all trims when the Landau Roof is ordered.

EXTERIOR ORNAMENTATION

A plaque with Fleetwood in coined block letters is an exclusive Landau emblem. It is attached to the sail panel below the Landau bow.

In addition, the wreath and crest appears on the lower rear quarters, as on all Fleetwood "75" cars.

All special orders are at extra charge and require additional time to produce.

CLOTH FRONT AND REAR

UNDERSIGNED DEALER CERTIFIES THAT HE HAS CURRENT ARRANGEMENT WITH AN O.D.C. FINANCER AND THAT SETTLEMENT SHOULD BE MADE THROUGH SUCH O.D.C. FINANCER.

CLOTH FRONT AND REAR

In a "75" Limousine style S, the same cloth fabric used to upholster the rear compartment may be substituted for the Black leather on the front seat.

TRIM STYLE

The cloth front seat trim will be 2" pleats similar to the leather style.

FRONT DOORS

The front doors will be Sedan, style R, type which includes Tamo wood panels.

All special orders are at extra charge and require additional time to produce.

ORDER EXAMPLES

ILLUSTRATIONS

Pages 49 through 58 contain illustrations and descriptions of the most frequently ordered special features.

The bottom half of the wholesale Order Form (Cad. 5600A) is designed to accommodate special order requests.

Detailed instructions for completing this portion of the form are on page 62. Following the example illustrated will prove most helpful.

If the desired trim combination is not illustrated or any questions arise, the zone office will provide assistance.

If there is a possibility that a request written on an order form could be misinterpreted, a letter explaining the special features desired should be sent with the order.

SPECIAL FEATURES

Every effort will be made to accommodate requests for special features. However, because of certain component restrictions, some changes from standard production options cannot be made.

The following pre-fabricated components are not available in all colors for all body styles because they are exclusive to certain series: doors, pull straps, vacuum formed front seat backs, etc.

If a non-standard color leather interior is desired, the above components would have to be selected in a neutral color.

TRIM CODE

The code in special trim box determines color of the major interior components — doors, headlining, seats, carpets and instrument panel.

If these components are desired in another color, designate code in appropriate box on the order form.

BUTTONS — LACES

These items cannot be eliminated because, in addition to being decorative, buttons, laces and pleats serve to tie down and retain the original shape of the upholstery.

PAST MODEL UPHOLSTERY

Only interiors in colors and fabrics currently in production can be furnished.

Past model fabrics or material supplied by a customer cannot be used.

LEATHER INTERIORS

Leather can be supplied in any number of colors; however, remaining interior components would have to be a standard production color.

When non-standard color leather is requested, Maximum Leather will be specified to cover a greater portion of the interior in a matching color.

This type of interior requires additional time and involves extra cost, since all parts are cut and sewn by hand.

LEATHER NOT IN CALAIS

A single piece of fabric covers the seat cushion in the Calais trim styling. Also, a bolster extends across the entire back rest in the Sedan N and rear seat of style G.

This means that a single piece of material is required to upholster these areas and cowhides are not large enough to cover them.

TRIM STYLES NOT INTERCHANGEABLE

Each series has an exclusive trim style which cannot be substituted in other series.

SPECIAL EXTERIOR

Acrylic lacquers are used for exterior finishes. Almost any color can be matched in this material.

However, requests for an exterior with transparent pigments or pearlescent coatings cannot be supplied because of certain production techniques that do not allow for this type of custom paint work.

DOUBLE CHECK

Because special feature orders are sold cars and involve additional time and an extra charge, specifications should be double-checked to avoid errors.

SPECIAL ORDERS

Some features not offered in standard production are available on a special request basis. This special service is provided to satisfy the discriminating Cadillac customer and to assist in conquest sales. Orders requesting special features should not be used for promotional or speculative purposes.

TIME REQUIRED

Because special feature orders require procurement of non-standard parts, writing detailed production instructions and individual assembly, additional time is necessary to complete these operations. Also, only a limited number of special requests can be scheduled for production daily.

As a general rule, from the time the order is received at Central Office:

- 1) Special trim orders are completed in four to eight weeks, depending upon the type of interior requested.
- 2) Special lacquers require four weeks to produce the completed car.
- 3) Special equipment orders are built within three weeks.

Because each order is unique, it is extremely difficult to estimate the exact amount of time required.

Shipment time is in addition to the production time.

The time element must be clearly understood before a special request order is submitted. To avoid any misunderstanding, the customer should not be promised a specific delivery date, as many factors influence the time required to build and ship special feature orders.

Production of special orders is scheduled to start in early November and these orders are built on a "first-come, first-served" basis. The large number of orders received at the beginning of the model year creates a back-log that will add to the time required for production.

ACKNOWLEDGMENT

Based upon the information available, each special trim order is acknowledged with an estimated production date. A Xerox copy of the special trim order (CAD 5600A) with the estimated production date is sent to the Zone Office for forwarding to dealer. If this acknowledgment is not received within two weeks, an inquiry should be made as this might indicate that the order has been misdirected.

In an effort to keep the dealer and customer informed of the status of an order, whenever a production estimate cannot be met, a revised date will be forwarded to the zone office.

MAIL IMMEDIATELY

As soon as specifications on a special order are finalized, the order should be submitted against a future allotment. Production of the parts necessary to complete the special order can be initiated, thus reducing the lead time.

SEATS ONLY

The seats only in White leather with balance of interior in Blue (as illustrated above) may be ordered. Other colors may be specified for the doors, headlining, carpets and instrument panel when White leather is ordered.

HEADLINING

In closed cars, special consideration should be given to the headlining color, as White may be preferred. If so, specify 352 under Headlining.

TWO-TONE CONVERTIBLE

An interesting Convertible combination is one in which the doors, etc., are harmonized with the exterior. i.e. code 74 San Mateo Red with Red doors and White seats.

LACES

Another option for consideration are the laces. These may be ordered in a dark tone for contrast on the seats.

EXTRA CHARGE

As a matter of information, the extra charge for a SEATS ONLY upholstery combination will be the same as a complete special leather upholstery interior.

All special orders are at extra charge and require additional time to produce.

BLACK AND WHITE

A two-tone interior may be created by specifying a contrasting bolster color. This provides a change from the one color effect of a standard interior.

On such combinations, the leather or vinyl "bolster area" of the seats, cushion skirt and facings of back rests will be in the color specified under bolster.

The doors, headlining, inserts, instrument panels and front seat back panel will be in the basic trim color. In the example shown, they would be in Black.

MORE CONTRAST

However, if more contrast should be wanted, the back of front seat back panel and seat wings may also be ordered in the bolster color. Order should be marked "Front Seat Back Panel Same as Bolster."

OTHER COMBINATIONS

In addition to an interior with the sharp contrast of White and a dark color, other attractive arrangements of compatible colors may be created by combining such shades as Beige and Brown or Red and White.

All special orders are at extra charge and require additional time to produce.

FOR CALAIS SERIES

VINYL COLORS

White	252
Med. Blue	260
Dk. Blue	266
Med. Turquoise	268
Dk. Green	271
Med. Gold	284
Dk. Brown	286
Dk. Mauve	287
Med. Red	288

These special request colors are in addition to Black - 251, and Ant. Med. Beige - 283, which are standard vinyl options at nominal extra charge.

WHITE VINYL

With White vinyl (code 252) the following will be Black:

1. Instrument Panel and Rear Shelf
2. Carpets
3. Seat Belts
4. Door Pulls

5. Back of Front Seat Back Panel (Coupe G will be White)

Other colors in place of Black may be ordered for these components. To order, specify the following in any standard Calais color:

- Instrument Panel
- Carpets

TRIM STYLE

Vinyl in colors other than Black and Ant. Med. Beige will be in the cloth trim style. This style has only one flat lace on either side of the center arm rest, in contrast to the Black and Ant. Med. Beige styling which has three flat laces on either side of the arm rest.

CARPETS

When a non-standard color is ordered, the carpets will be the all nylon, Trianon and Tyrol quality.

All special orders are at extra charge and require additional time to produce.

CARPET CHANGES

A variety of trim combinations can be achieved by changing the carpets and instrument panel color. The instrument panel color will match the carpets unless otherwise specified.

WHITE LEATHER

Carpets and Instrument Panels in colors other than Black may be ordered with White leather. The order illustrates a White and Blue combination.

AVOID THREE TONES

Changes in carpet colors are made to create a more harmonious combination with the exterior color.

The instrument panel color is an important consideration, because it appears as an extension of the hood.

It should match or complement the exterior and carpet color. If not, a three-tone interior will result.

All special orders are at extra charge and require additional time to produce.

ALL CLOTH

Areas that are normally in leather or vinyl can be specified in "all-cloth" by completing the order as illustrated above.

PATTERN DISCREPANCY

When "All-Cloth" trim is requested, a discrepancy of pattern may occur because each piece is cut separately.

TRIM STYLE

Trim styles are not interchangeable between body styles. If an "All-Cloth" trim is requested, the trim style of body style ordered will be used.

All special orders are at extra charge and require additional time to produce.

ALL CLOTH

The center section of the seats will be in Decordo Cloth - not leather. That is why the bolsters are marked 719 in the order illustration. It means the entire top cover of the seats and face of back rests will be in the cloth fabric.

COLOR

This Fleetwood "75" cord material is medium Gray. However, certain prefabricated sections will be light Gray.

Such components as the headlining, back of front seat back panel, doors, door pulls, seat belts will be light tone. Combination 016 is, therefore, specified for the basic trim which represents the light tone color on these parts.

All special orders are at extra charge and require additional time to produce.

SPECIAL LEATHER COLORS

The order illustration shows Red leather on a Sedan de Ville. Leather not offered as a standard production option can be special ordered. A complete list of leather colors and codes is on page 23.

COUPE TYPE FRONT SEAT

All leather trimmed De Ville cars will have a notch back, Coupe type front seat. In a Sedan, the individual backrests will be anchored so they do not fold forward.

A Sedan type front seat, eliminating the coupe type notch, with leather trim is available at extra charge.

DUAL COMFORT SEAT

Dual Comfort Seat, with a notch back, can be ordered with Special Leather.

MAXIMUM LEATHER

Leather trim implies the use of vinyl for certain areas. A large area such as the seat skirt, is made of vinyl because a cowhide would not be large enough to make up this piece.

"Maximum Leather" may be ordered so that every possible component will be in leather. The areas that will be leather when "Maximum Leather" is ordered are: the seat skirts, seat facings, side of center arm rest and the back of front seat back insert.

EXTRA CHARGE

The extra charge for "Maximum Leather" is more than the suggested retail price of special leather because of the hand cutting, sewing and additional material required.

All special orders are at extra charge and require additional time to produce.

NON-STANDARD COLORS

Any past model or non-standard color can be supplied on special order at extra charge.

To order, type 00 in COLOR space which denotes that color is not standard option.

In space captioned SPECIAL EXTERIOR COLOR, describe color by name and model year.

Allow four to five weeks for shipment of any special color.

HIGH GLOSS ACRYLIC MATERIALS

A previous model year color may have been formulated with now obsolete pigments. The newer chemicals have improved color retention and durability. However, they could produce a variance in appearance between the new and old finishes.

This is a matter of information that may be of special interest to fleet owners who add new cars in the original fleet colors and have noticed a difference in their older and newer vehicles.

All special orders are at extra charge and require additional time to produce.

CUSTOMER WILL CALL

CWC

A Cadillac dealer can make arrangements for a retail customer to take delivery of a car at the factory. Such a delivery is designated as a Customer Will Call – CWC.

DELIVERY DATE

Reservations for a delivery date should be made, well in advance, with the Zone Office. Central Office will confirm this date to the dealer.

PROCEDURE

When the confirmed "CWC" date is received, a copy of the order form (CAD 5600A) should be sent to the Zone Office. The confirmed delivery date should be entered and the customer's name and address shown. "CWC" must appear at the top of the form and in the "SHIP TO" space.

ACKNOWLEDGMENT FORM (CAD 3864)

An acknowledgment of the request for "CWC" delivery is mailed shortly after the order is received at Central Office.

The acknowledgment form (CAD 3864) will show the complete specifications of the order, customer's name and address and the confirmed date of delivery.

This form should be carefully checked and any discrepancies reported to Central Office.

RELEASE FORMS (CAD 3868)

Enclosed with the Acknowledgment form will be a set of Release forms that contain the specifications and customer's name.

Instructions for completing the necessary release forms are on the acknowledgment form (CAD 3864).

The blue copy of the release form is to be signed by the customer in the dealer's presence and mailed (in the envelope provided) as soon as possible. Customer is to present pink copy at time of delivery. White copy to be retained by dealer.

The customer will be required to countersign the blue copy at time of delivery.

THIRD PARTY

If a third party is to take delivery, the reverse side of the release must be completed by the purchaser and signed by individual accepting delivery. This release must be presented by third party in order to secure delivery of car.

LICENSE PLATES

License plates should be Air Mailed—Special Delivery, using the label provided so that they arrive prior to "CWC" date.

If customer will bring license plates, this should be indicated on the blue release form.

VEHICLE IDENTIFICATION NUMBER

A telegram containing the Vehicle Identification number will be sent to the dealer as soon as it is available.

MAY WE CALL YOUR ATTENTION TO THE FOLLOWING FEATURES FOR 1970

- 8.2 LITRE ENGINE** For Eldorado
- RADIOS** AM-FM tuner on all radios.
Signal seeking feature available.
- DEFOGGER** Available on the Convertible.
- TIRES** Fiberglass Belted Bias construction. Tread width increased by one inch. Tread ribs increased from five to nine.
- BODY MOLDING** For Fleetwood Eldorado, Bróugham and Sixty Special colored vinyl insert in the body molding matches padded roof – black if padded roof is not ordered.
- LEATHER** Sierra grain leather is used for both inserts and bolsters when this option is ordered.
- CRUISE CONTROL** Vacuum powered with a push button control at the end of the turn signal lever is available on all styles.
- EQUIPMENT GROUPS** ... New content in Groups 8 and 9.
- TAMO WOOD INSERTS** .. On door and instrument panels of all Fleetwood interiors and De Ville leather interiors.
- RADIO ANTENNA** Now sealed in the windshield.
- TRUNK MAT** Rubber luggage compartment mat available.
- FIREMIST COLORS** Two additional Cadillac exclusive Firemist color options for a total of seven.
- VINYL ROOFS** Two new colors for a total of seven.

NEW COLOR NUMBERS

A revised formula for exterior color code numbers has been devised beginning with the 1970 model year.

The principle of this color identification system is similar to Cadillac's previous two-digit numeric coding and grouping by color families. The number of color groups has been increased from 7 to 9 to provide more flexibility, thereby assuring continuity.

In the revision process, some traditional numbers were changed. For example, Black is now Code 19.

Color 49 is now Glenmore Green. Last year this number was Empire Maroon. Special attention is called to this to be sure that Green is not ordered instead of Monarch Burgundy which is now Code 79.

This chart shows the new 1970 numbers and names compared with corresponding 1969 color codes.

1970 CODE	NAME	1969 CODE
11	Cotillion White	12
14	Patina Silver	16
18	Phantom Gray	18
19	Sable Black	10
24	Corinthian Blue	24
29	Condor Blue	26
34	Adriatic Turquoise	28
49	Glenmore Green	36
54	Byzantine Gold	44
59	Bayberry	30
64	Sauterne	42
69	Dark Walnut	46
74	San Mateo Red	48
79	Monarch Burgundy	49

Firemist color codes are not affected by this new system.

The other General Motors divisions have also adopted this system for their production operations. This type of numbering will, therefore, appear on body identification plates of all G.M. cars.

Following are the basic color families and their number range. Firemist colors remain in the 90 series.

CODE NUMBER RANGE	COLOR FAMILIES
10 - 19	Neutrals
20 - 29	Blue
30 - 39	Aqua — Turquoise
40 - 49	Green
50 - 59	Yellow — Gold
60 - 69	Beige — Brown — Bronze — Copper — Orange
70 - 79	Pink — Red — Maroon — Plum — Burgundy
80 - 89	Miscellaneous
90 - 99	Firemist

95	Cinnamon					L68 YD 001 927-99746
96	Nottingham Green					L68 GD 025 927-99756
97	Briarwood	2.88	3.25	7.59	4.41	L68 ND 009 927-99747
99	Chateau Mauve	1.51	2.40	4.60	1.79	L68 PD 007 927-99495

The above percentage figures represent usage of previous model comparable colors. Percentages are omitted for colors without a counterpart; therefore, the totals will not equal 100%. These figures are to be used as a guide only, as they do not reflect regional preference influenced by climatic conditions.

The manufacturer's identification numbers are listed in the column at the right. Inmont numbers begin with L. Eight-digit codes are Dupont. Forbes' codes begin with 8. Forbes does not furnish Firemist colors.

INTERIOR INFORMATION

NUMBER OF TRIM OPTIONS

182 trim options in 12 colors are available for 1970. The trim chart on page 4 lists standard cloth trims and the seat options.

The 90 leather options are listed on page 5.

OPTIONS

The number of options that can be made available in production is limited. Some options are not offered because the demand on certain body styles is limited. An example is White leather with Red carpets on the Sedan De Ville.

SPECIAL ORDER

To prevent a loss of sale due to non-availability of a certain trim, almost any trim combination can be special ordered.

SIERRA GRAIN LEATHER

Inserts and bolsters are in Sierra grain when optional leather is ordered. The texture of this leather is smooth and supple in a dyed through finish.

Leather may be ordered in any style except the "75" styles R and S and Calais, styles G and N. An expanded vinyl in Black or Beige is offered as an option in the Calais.

SEAT TYPES

Definitions to supplement the seat sketches that follow are listed below.

Cushion — The cushion determines the classification of the seat.

Backrest — The backrest is notched or straight across depending upon the trim, body style or seat option.

Bench Seat — The cushion is not divided.

Dual Comfort Seat — The cushion is divided 60% for the passengers and 40% for the driver.

Bucket Seats — Individual seats with a center console.

BENCH SEAT

The Bench Seat is available with and without a notch in the backrest, depending upon the body style and trim. The following are the two categories of the Bench seat.

Coupe Seat

A coupe type seat is notched at the center so that the backrest may fold forward. This seat is used in all two-door cars with both cloth and leather trims.

Sedans with leather trim will have this Coupe type seat, but the backrest will not fold forward.

Sedan Seat

The backrest on a Sedan type seat is straight across without a notch. This type seat is used with cloth upholstery in four door cars.

DUAL COMFORT SEAT

Trim numbers suffixed with S indicate the Dual Comfort Seat. This seat has a notch in the center of the backrest and the cushion is divided 40% for the driver and 60% for the passengers. A full center armrest is attached to the passenger section.

The two seats are individually adjustable. The driver's portion has a two-way power adjuster. The passenger side can be adjusted forward and rearward manually.

Optional seat adjusters are listed on page 18.

Dual Comfort seat: standard on the Brougham P; optional on the De Ville, F, J, B and Fleetwood M.

Dual Comfort seat: not offered on Sedan De Ville, style L, but available on special request. It is not available on Eldorado or Calais.

BUCKET SEATS

Strato type Bucket Seats in Black leather are offered for the Eldorado only.

Bucket Seats are not available on any other body style, even on special order.

A center console, to match the trim, is placed between the two front seats.

CALAIS AND DE VILLE FRONT SEATS

Calais Coupe

Coupe type seat with free-standing center arm rest. Optional vinyl trim style is illustrated. Cloth upholstered cars will have only one flat lace on each side of the center section as illustrated below.

Calais Sedan

Bench type Sedan seat illustrated in cloth trim style with center arm rest. Optional vinyl trim will have three laces on each half of the seat.

De Ville Dual Comfort Seat

Optional with all trims in the De Ville Convertible, Coupe and Hardtop Sedan.

De Ville Coupe

Notch back seat, with folding back rest and center arm rest used in all De Ville two-door cars. Sedans in optional leather will also use this type seat with stationary back rests.

De Ville Sedan

Sedans will have this type of seat with cloth upholstery.

FLEETWOOD FRONT SEATS

Eldorado Strato Bench Seat

Two inch wide pipes are used to achieve this classic trim style. This same styling is used with cloth or optional leather upholstery.

Eldorado Strato Bucket Seats

Available in Black leather at extra charge on the Eldorado only. A center console is included.

Dual Comfort Seat

This styling is used for all trim choices. Dual Comfort Seat is standard on the Brougham and optional on the Sixty Special.

Bench Type Seat

Standard on Fleetwood Sixty Special and Fleetwood "75" Sedan with all trims.

Front seat on "75" Limousine will be Black leather in 2" pleats.

EQUIPMENT

NEW CODES

Each option now has its own code. To avoid duplicate option symbols, some items have been recoded with new letters or numbers. Familiarization with these codes is important to avoid errors in ordering.

ITEMS WITH NEW CODES

A	—	Rear Window De-Fogger	5	—	License Frame — One
I	—	Rim Control Horn	6	—	License Frames — Two
P	—	Rubber Trunk Mat	7	—	Filler Plate
T	—	Remote Control Trunk Lock	R	—	Evaporative Emission Control (California Only)

GROUP CONTENT

Groups 1, 2, 3 and 4 contain:	Radio	Door Edge Guards
	White Wall Tires	Automatic Climate Control
	Soft Ray Glass	Power Seat Adjuster
New Group 8 is composed of:	Power Door Locks	Rubber Floor Mats
	Tilt & Telescope Steering Wheel	Rubber Trunk Mat
	Remote Control Trunk Lock	
New Group 9 consists of:	Twilight Sentinel	Cruise Control
	Rear Window De-Fogger	Guide-Matic Headlamp Control

The content of groups has been designed to conveniently package those items most frequently ordered by Cadillac customers. Additional items may be ordered by designating the individual code symbol.

Even though certain items in a group are standard or not available on a particular body style, the group may be ordered.

CAUTION: Group 1 — do not order on Fleetwood "75" as Stereo Radio is not available for these body styles.
Group 4 — can be ordered for "75" Sedan or Limousine only. Rear Control Radio is not available on any other style.

NEW OPTIONS

A brief description of new and improved options follows.

- | | | |
|----------------|--------------------------------|--|
| W | — Tires | — The optional White Wall tires are of Fiberglass Belted Bias construction. |
| 1-2-3-4 | — Radios | — All radios have AM-FM tuners. A Signal Seeking device is also included on all radios except code 3, the AM-FM push-button.
Radio antenna is sealed in the windshield of the car. |
| A | — Rear Window De-Fogger | — is now available on all styles including Convertible. De-Fogger is standard on Fleetwood "75" Sedan and Limousine. |
| P | — Trunk Mat | — A Gray, one-piece, rubber Trunk Mat is available as factory installed option. |
| I | — Rim Control Horn | — A vinyl insert around the inner circumference of the steering wheel contains a horn control. This is in addition to a horn control located in the center pad of the steering wheel.
This control is included as part of the Tilt and Telescope Steering Wheel option. |
| C | — Cruise Control | — is vacuum operated with the speed selector in the end of the turn signal lever and by an ON-OFF switch on the instrument panel. |
| R | — Evaporative Emission Control | — California cars only. Available only on cars destined for initial registration in the State of California. Code R should be specified on such orders only. |

- L** – Level Control is standard on all Fleetwood cars.
- A** – De-Fogger is standard on "75".

GENERAL INFORMATION

BODY STYLE REFERENCE

Reference in this book to "C" cars includes the Calais, De Ville and Fleetwood Sixty Special and Brougham.

The Fleetwood Eldorado is referred to as "H".

"R" for the Fleetwood Sedan and "S" for the Fleetwood Limousine are the most common designations for the "75" series.

EXTRA CHARGE

Unless specifically stated otherwise, any reference to option, optional equipment, special request or special feature indicates that this item is available at extra charge.

BODY MOLDINGS

Calais and De Ville series cars will have a bright chrome molding.

A vinyl insert in the body molding is found on all Fleetwood series cars including "75". The molding is bright chrome and the insert will match the color of the padded roof or it will be Black when the padded roof is not specified.

TRIM STYLING

Brougham and Sixty Special

Trim styling for the Brougham and Sixty Special is a departure from the two and three pillow style of recent years.

The cushion is one-pillow with two buttons for accent. The backrest will be two-pillow, the upper pillow being larger.

The lower pillow, when Dumbarton cloth is ordered will be in matching leather. The center section on seat cushion will be Dumbarton cloth. The "bolster" will now be horizontal instead of vertical.

The facings of this leather lower pillow will be in vinyl to match.

With Divan all cloth trim, the two-pillow trim style is used, but leather is omitted.

ELDORADO

Two inch pleats are used with cloth and leather trim selections to achieve a classic trim style.

VINYL ROOFS

There are 7 vinyl roof colors for 1970. In addition to White, Black, Dk. Blue, Dk. Brown and Lt. Beige, two entirely new colors are available. They are Dark Mauve and Dark Bayberry.

The Convertible top is available in five colors. White, Black, Dark Blue, Light Beige and the new Dark Bayberry are the selections.

FIREMIST COLORS

The Firemist options have become exceedingly popular because of customer demand for something unique. Firemist colors are now available in seven colors.

Two entirely new color families are represented in 1970.

Cinnamon is a vibrant orange-gold Firemist.

Nottingham Green Firemist represents the emerald green family.

An optional trim of White leather with Nottingham Green carpets and instrument panel is designed specifically for Nottingham Green Firemist exterior.

TIRES

STANDARD

Blackwall Fiberglass Belted tires, size L78-15, load range B, are standard on all cars except "75" Sedan and Limousine. On "75" cars, the size is L78-15, the load range is D.

OPTIONAL

Whitewall tires of the same size are optional. Two narrow white bands accent the sidewall. Order basic group 1 through 4 or specify code W.

FIBERGLASS BELTED TIRES

The construction and configuration of this tire are designed to increase tread wear, improve handling characteristics and make the tire more resistant to road hazards.

This tire is made with two plies of polyester cord body and two fiberglass belts. The two plies of polyester cord and the fiberglass belts are applied on the bias. The first fiberglass belt is as wide as the tread area. The second belt is slightly narrower.

TIRE SIZE L78-15

These new tires are 1 inch wider. In addition, the Fiberglass Belted Bias tire has 9 ribs.

The "L" indicates the width of the tire. This converts to the 9.00 designation used previously. The "78" is the aspect ratio. This means the width of the tire is 78% of the height.

The "15" is the interior diameter of the tire and the size of the wheel that this tire is mounted on.

To specify a tire brand, use the following codes:

U Uniroyal
F Firestone

G Goodrich
Y Goodyear

ALL MAKES NOT ALWAYS AVAILABLE

Tires for Cadillac cars are supplied by four manufacturers in a variety of sizes, and black or white side walls. This complexity creates storage problems that make a continual inventory of all makes and types difficult to maintain.

Also, availability problems are encountered since all tires must meet the standards of Cadillac's quality control program. It is realized that some customers designate a tire brand preference which dealers understandably wish to accommodate. However, as a relatively small percentage of such requests can be considered without risking a delay in car production, only in case of customer insistence should tire brands be specified on the car order.

Notwithstanding these situations, Cadillac will endeavor to supply a tire brand option, provided such requests do not exceed 5% of a dealer's orders during a model year.

Black side wall tires are standard equipment on all cars. Because of the extremely small demand, it is not feasible to offer a black wall tire brand option even on a limited basis.

HIGH SPEED NYLON TIRE

An optional nylon cord tire is available on special request at extra charge. Mark the order "HIGH SPEED NYLON TIRES". These tires are manufactured by Goodyear.

GENERATORS

Ampere capacity of generators is as follows:

55 Amp-Air Conditioned Cars
42 Amp-Without Air Conditioning

For cars that will be equipped with a telephone or other devices that will be electrically operated, an optional 63 Amp Generator is available on Special Order.

GEAR RATIOS

Gear Ratios are the same for both Automatic Climate Control cars and those ordered without air conditioning.

There are no options.

The ratios listed below are for information purposes only.

2.93-1 for "C" Cars
3.07-1 for Eldorado
3.15-1 for "75"

GLASS

STANDARD

Clear solid tempered safety plate glass is standard in all side and rear windows. This includes the rear window on the Convertible.

The windshield on all cars and division glass in the "75" Limousine are laminated safety plate glass. The windshield on all cars will have the impregnated radio antenna.

OPTIONAL, CODE E

Soft Ray glass is tinted and the upper part of the windshield is shaded. In addition to providing relief from the sun's rays, Soft Ray glass aids Automatic Climate Control by screening infra-red heat rays.

Soft Ray glass is recommended, especially when Automatic Climate Control is ordered.

RADIO ANTENNA

The radio antenna is sealed in the windshield glass whether Soft-Ray or clear glass is ordered.

A fine wire is placed across the windshield approximately four inches from the top and

runs down the center to a lead wire connecting the antenna to the radio.

The position of the antenna provides for less distortion in the reception because the lead wire to the radio is very short.

RUBBER FLOOR MATS

CODE	COLOR	Twin Front & Rear			One Piece Front & Rear	Twin Front Only

CODE V

This code designates the right side front passenger 6-Way Power Seat Adjuster option on Dual Comfort Seat.

HOW TO ORDER

When a 6-way *passenger* seat adjuster is wanted on a Dual Comfort Seat, a 6-way *driver's* seat adjuster must also be ordered.

Mark both Y and V, or V plus a basic group (which includes Y) on the order form 5600A.

CODE Y

Represents a 6-Way power adjuster (or 4-Way on Eldorado driver's Bucket) for the

following types of front seats:

- 1) Regular Bench.
- 2) Driver's (left side) portion of individually controlled Dual Comfort Seat.
- 3) Eldorado driver's Bucket Seat.

SWITCH LOCATIONS

All front seat adjuster controls are located at lower left side of seat (including "75" cars) except passenger dual comfort and bucket seat control is on right side. All seat switches operate independently of the ignition switch.

UFORMA

1970 NEW CAR ORDER

1	CUSTOMER ORDER DATE 1-5-70	DEALER ORDER DATE 1-9-70	ALLOT. MONTH February	CUSTOMER WILL CALL CWC	DATE 2-26-70	2
3	CHARGE TO DEALER AT: CITY (A) Hometown		STATE U.S.A.			
4	SHIP TO: (LEAVE BLANK IF SAME) (B)					
	ORDER		STATUS			
	SOLD-S	S	STOCK-U	RENTAL & LEASING -R	DEMO-D	
5	PURCHASER Mr. J. Smith					

This portion of the order form shows the charge to dealer, ship to destination and to whom the car is sold.

- Two dates are necessary: the date the customer places the order, and the date the order is sent to the zone. The allotment month name (not number) against which the order will apply.
- Enter CWC if delivery is to be at the factory in Detroit and the confirmed date of Customer Will Call.
- Ordering dealer's city and state, if there is more than one dealer in a city, insert an additional reference.
- If Courtesy Delivery indicate city and state of delivering dealer.
- Enter an order status code and, if sold, indicate purchaser's name.

6	SHIP TO CODE (B) 000000	
7	DEALER CODE (A) 000000	STYLE NO. 68347
8	ORDER NO. J 100	

- Code of delivering dealer if other than selling dealer; CWC if factory delivery.
- Six-digit identifying code of selling dealer. Five-digit body style code.
- Order number is composed of body style alpha code, followed by sequential number of dealer's orders from 1. e.g. J 1, B 2, etc.

MAY WE CALL YOUR ATTENTION TO THE FOLLOWING FEATURES FOR 1970

- RADIOS** AM-FM tuner on all radios.
Signal seeking feature available.
- DEFOGGER** Available on the Convertible.
- TIRES** Fiberglass Belted Bias construction. Tread width increased by one inch. Tread ribs increased from five to nine.
- BODY MOLDING** For Fleetwood Series colored vinyl insert in the body molding matches padded roof – black if padded roof is not ordered.
- LEATHER** Sierra grain leather is used for both inserts and bolsters when this option is ordered.
- RIM CONTROL HORN**... A horn control on the inner circumference of the steering wheel is available, in addition to the horn control in the center pad of the steering wheel.
- CRUISE CONTROL** Vacuum powered with a push button control at the end of the turn signal lever is available on all styles.
- EQUIPMENT GROUPS** ... New content in Groups 8 and 9.
- TAMO WOOD INSERTS**.. On door and instrument panels of all Fleetwood interiors and De Ville leather interiors.
- RADIO ANTENNA** No longer on the body, now sealed in the windshield.
- TRUNK MAT** Rubber luggage compartment mat available.
- FIREMIST COLORS** Two additional Cadillac exclusive Firemist color options for a total of seven.
- VINYL ROOFS** Two new colors for a total of seven.

NOTICE

All general statements in this booklet exclude Fleetwood "75" unless specifically stated that the information does include the Fleetwood Sedan and Limousine body styles.

It is understood that any reference to option or optional items or equipment is at extra charge.

All specifications contained in this advance information booklet and upholstery selection card are based on the latest product information available at the time of publication.

Cadillac Motor Car Division, General Motors Corporation, reserves the right to make changes at any time, without notice, in colors, materials, options, accessories, special equipment, specifications and body types and also to discontinue or add body types.

1970 Cadillac

OWNER'S MANUAL

IMPORTANT OPERATING, SAFETY AND MAINTENANCE INSTRUCTIONS

THE MARK OF EXCELLENCE

This is the General Motors mark of excellence that appears on all Cadillac motor vehicles.

We use it in the same spirit with which craftsmen, through the centuries, have used a personal mark to identify the products of their skills: We are proud of the things we make, and we want our customers to be able to identify them easily and to know that we stand behind them.

Whenever you see this mark of excellence, you can be certain that it represents our very finest in design and engineering. And that it has been built with the care and dedication you have come to expect from Cadillac.

Your new 1970 Cadillac meets or exceeds all applicable U.S. Federal Motor Vehicle Safety Standards. Effectiveness of these safety features can best be continued through regular vehicle inspection and maintenance.

FOR MAXIMUM PERFORMANCE AND ECONOMY KEEP YOUR GM CAR ALL GM. SPECIFY GENERAL MOTORS PARTS IDENTIFIED BY ONE OF THESE TRADE-MARKS:

CADILLAC MOTOR CAR DIVISION
GENERAL MOTORS CORPORATION
DETROIT, MICHIGAN 48232

IMPORTANT INFORMATION FOR THE CADILLAC OWNER

This manual has been prepared to acquaint you with the operation and maintenance of your 1970 Cadillac. We urge you to read it carefully and follow the recommendations contained to help assure the most enjoyable and trouble-free operation of your vehicle. Listed below are subjects that deserve your special attention.

AIR POLLUTION CONTROL—A special colored supplement describes the operation and maintenance of the air pollution control systems on your car. **See Page 53**

ALPHABETICAL INDEX—A complete index will be found in the back of the manual to assist you in locating specific information on your vehicle. **See Page 90**

CHANGE OF ADDRESS OR VEHICLE OWNERSHIP—U.S. Federal Law requires the manufacturer to contact vehicle owners of record in the event a product safety defect is discovered. Your Cadillac Dealer should be notified if you change your address, or purchased this car used. **See Your Dealer**

DEALER ASSISTANCE—Your Cadillac Dealer knows your vehicle best and is interested in your complete satisfaction. Return to him for Guardian Maintenance Service and any other assistance you may require. To assist dealers in handling your needs, Cadillac maintains zone offices at the locations listed on page 88. Should you have any questions that

your dealer is unable to answer, the zone office nearest you, or the Owner Relations Department at the Cadillac Division address shown on the opposite page, will be pleased to assist you. **See Your Dealer**

MAINTAINING SAFETY AND DEPENDABILITY—A special colored supplement contains recommendations to help you maintain the safety and dependability originally built into your Cadillac. **See Page 17**

PROTECTING YOUR INVESTMENT—Only *you* can assure that the investment in your Cadillac is adequately protected. Regular and proper service as outlined in the manual will help you get the utmost in satisfaction and extended service from your car. **See Page 58**

WARRANTY—When purchased new, your Cadillac is covered by the Cadillac New Vehicle Warranty and the Policy on Cadillac Owner Service. Complete details will be found in the Cadillac New Vehicle Warranty and Owner Protection Plan folder which was given to you by your Cadillac Dealer at the time of new car delivery. **See Your Warranty Folder**

All information, illustrations and specifications contained in this manual are based on the latest product information available at the time of publication approval. The right is reserved to make changes at any time without notice.

SERVICE DEPARTMENT, CADILLAC MOTOR CAR DIVISION

Safety on the Road depends on . . .

1. *You, the Driver*
2. *The Condition of Your Vehicle*
3. *Traffic and Highway Conditions*

... BE SURE YOU UNDERSTAND ALL THREE!

REMEMBER Proper operation, periodic maintenance and safety inspections help provide . . .

- *Economical Operation of Your Vehicle*
- *Safety for You and Your Passengers*
- *Dependable Transportation*

**Observe All Traffic Laws—
Make Safe Driving a Habit**

WHEN PARKED

Don't invite theft by leaving your car unlocked or leaving valuable articles in view. Never leave children unattended in the automobile where they could accidentally release the brake or activate other controls.

IN TRAFFIC

Study and understand surrounding traffic conditions before slowing, passing, turning or lane-changing, so you won't run into the unexpected. Maintain proper spacing, and check rearward conditions too.

When the light turns green, make sure cross-wise traffic has stopped before starting up.

Anticipate your next move and signal your intention at a reasonable time to the drivers around you.

DRIVING AT NIGHT

Remember to remove sunglasses at dusk and at other times when the lighting is poor. Be especially alert for pedestrians and unlighted vehicles at dusk and after dark. Use "low beam" when approaching or following other cars, and look slightly to the right of oncoming lights.

Even properly aimed headlamps may cause annoying glare if the car is heavily loaded in the trunk. Distribute the load in your car as evenly as possible to avoid blinding other drivers.

Turn on your headlamps at early dusk, and during bad weather, to help other drivers see your car.

INCLEMENT WEATHER

Proceed cautiously in inclement weather, until you are sure it is safe to drive faster

2

Be prepared for sudden crosswinds when crossing bridges or viaducts.

Remember that some wet pavement is as treacherous as ice, and bridges and viaducts can be slipperier.

BAD ROADS

Remember, dust obscures vehicles and obstacles as completely as fog; drive cautiously in dust-clouded areas.

Avoid striking sharp rocks and pot-holes to avoid unnecessary (and often hidden) tire damage.

Remember to clean off headlamps, tail lamps and side markers after driving on wet, dusty, or muddy roads.

WINTER DRIVING

Drive extra cautiously when winter comes, until you adjust to winter driving conditions.

Remember side streets may be slippery for days after main streets have been cleared, and drive accordingly.

In heavy snow or on icy roads, drive more cautiously, allow more room to stop, and use the brakes conservatively, and reduce the possibility of skids by using chains or special tires.

To get moving in snow, press very lightly on the accelerator pedal, increase pressure very slowly, and don't spin the wheels. If the wheels spin, they will turn the snow to slick ice or dig your wheels in deeper. Sand, rock salt, Liquid Tire Chain, or a piece of carpeting under the rear wheels can help if you do get bogged down.

Remember that wet ice—at about 32°F.—is extremely slippery; drive very cautiously.

EXTENDED TRIPS

Before and regularly during the trip, check tire pressure, windshield washer and other fluid levels, and have necessary maintenance performed on a regular basis.

When driving along unfamiliar routes, it is safer to drive during daylight hours, and it is wise to obtain up-to-date maps and route information beforehand.

Remember that a high percentage of rural accidents involve head-on collisions and drive accordingly.

Budget your driving over the length of your trip. Share the driving or take rest breaks.

When driving alone for a long period, counteract monotony by changing radio stations, changing heater settings, opening windows, etc. If fatigue sets in, pull off the road for a short nap, or at least a rest.

ALWAYS

Be prepared for stopped or slow moving vehicles ahead.

Maintain an adequate distance between your car and the car ahead, to reduce the chances of rear-end collisions.

If you smell, or otherwise suspect that exhaust fumes are entering the passenger compartment, drive only with all windows and vents fully open, and then only until the cause can be determined and corrected.

3

SECTION 1

OPERATING YOUR CADILLAC

GENERAL

Your new Cadillac is ready for all normal driving just as you receive it from your dealer. Precision manufacturing techniques have prepared it for the road so that a formal break-in period is not required. From the very start, drive your new Cadillac in a normal manner at varying speeds, as required by different traffic and road situations.

Avoid extremely heavy duty operation such as towing trailers or excessive full throttle usage for the first 500 miles.

KEYS

Two separate keys are provided for your car. Each key has a different cross section so that it can be inserted only in certain locks. The key with the square head and the letter "J" stamped on it operates the ignition switch and door locks. The key with the oval head and the letter "K" is used for the luggage compartment and glove box locks, as well as the center console lock on cars so equipped. These compartments should be locked and the key removed from the car should it be necessary to leave the ignition key with an attendant.

The glove box door lock is of the rotary type.

The door can be unlocked and opened by rotating the key clockwise approximately 90 degrees or, if the glove box is unlocked, by rotating the lock by hand.

The code number of each key is stamped on the "knock-out" plug in the key head. Your Cadillac dealer removed the key plugs and placed them with the spare set of keys in the special key envelope that was given to you at time of delivery. Record the numbers on the key envelope and discard the key plugs. Keep the key envelope in a safe place such as your wallet, NOT IN THE CAR, so that you can have duplicate keys made in the event the original keys are lost.

4

NOTE: Whenever additional keys are required, always use original equipment key blanks which are made of special locksmith brass. These key blanks are available from Authorized Cadillac Dealers. The use of steel or aluminum key blanks can cause excessive lock wear or key breakage due to insufficient strength.

ANTI-THEFT STEERING COLUMN LOCK

The anti-theft lock, located on the right side of the steering column, has five positions. Starting from the full counterclockwise position (the position nearest you) they are, accessory, lock, off, on and start. To provide added theft protection for your car, the system is designed to prevent normal operation of the steering and shift controls when

the ignition switch is in the lock position. The transmission selector lever must be in "park" before the key can be turned to the "lock" position. The "off" position is provided so that the ignition can be turned off without locking the steering column or transmission shift lever. The ignition switch "accessory" position permits operation of electrical accessories when the engine is not running. It can be engaged only by pushing in on the ignition key and knob and turning counterclockwise. The key can be withdrawn only when the switch is in the "lock" position.

NOTE: The Anti-Theft Steering Column Lock is not intended as a substitute for the parking brake. Always set your parking brake when leaving the vehicle unattended to help assure that the vehicle will not move.

CAUTION: In a parking situation, always let go of the steering wheel, **BEFORE** turning the ignition key to **LOCK** position. When parking on a hill with wheels turned in to the curb, be sure the car has come to a complete stop before turning the key to **LOCK** position. Turning the wheels to left or right after the car stops "winds up" the steering system,

which can result in a "spring back" of the steering wheel when the lock is released. As a further precaution, never reach through the steering wheel to operate controls, or for any other reason.

If difficulty is experienced in turning the ignition key and lock knob to unlock the ignition, attempt to turn the steering wheel as hard as possible in the direction the wheels are turned. At the same time turn the ignition-lock knob in a clockwise direction with as much effort as you can apply with your own hand. Do not attempt to use a tool of any kind to apply additional force on the lock knob, as this could break the knob.

When leaving your car unattended,

- Set parking brake
- Place automatic transmission selector in Park
- Turn key to **LOCK** position
- Remove key
- Lock all doors

The ignition key warning buzzer warns you if you have left the key in the anti-theft lock when the driver's door is opened. Heed its warning—remove the key and lock the doors. The visible vehicle identification number on the instrument

5

panel aids in apprehension of thieves and recovery of stolen vehicles. Help it work; make sure it is not obscured by gloves, maps or other objects.

STARTING THE ENGINE

CAUTION: When starting the engine with the car parked, always have the foot brake applied.

NOTE: To prolong battery life, turn off switches for headlamps, radio, heater fan (except on cars equipped with air conditioning), and other unnecessary electrical loads prior to starting the engine in colder weather. Leave accessories off until the engine is running smoothly.

Place transmission selector lever in "P" or "N" ("P" preferred). Starting with the transmission selector in park "P" position, locks the transmission and prevents the vehicle from rolling either forward or backward. Always place transmission selector lever in park "P" position when car is stationary. A starter safety switch is designed to prevent starter operation while the transmission selector lever is in any drive position. If it is necessary to re-start the engine with the car moving, place the selector lever in neutral "N".

Cold engine—Fully depress accelerator pedal and slowly release. With foot off the accelerator pedal, crank the engine by turning the key to the "start" position and release when engine starts. Do not crank engine longer than 15 seconds at a time.

If the engine starts, but fails to run, repeat above procedure.

When the engine is running smoothly, the idle speed may be reduced by slightly depressing the accelerator pedal and then slowly releasing.

Warm engine—Depress accelerator pedal about halfway and hold while cranking the engine.

Extremely cold weather (below 0°F.) or after car has been standing idle several days—Fully depress and release accelerator pedal two or three times before cranking engine. With foot off the accelerator pedal, crank the engine (not over 15 seconds at a time) by turning the key to the "start" position and release when engine starts.

Proper engine oil viscosity is very important for easy cold weather starting. See page 70.

IF ENGINE FAILS TO START

Starting flooded engine—Hold the accelerator pedal all the way down and crank until engine starts (not over 15 seconds at a time).

Emergency starting—The automatic transmission does not permit the engine to be started by pushing the car. To start the car when the battery is discharged, use a single auxiliary battery of the same voltage as the discharged battery, with suitable jumper cables.

Hydrogen gas may be released by a battery and is generally present when the battery has been, or is charging. If the booster battery is part of another vehicle's electrical system, the booster battery should be treated carefully when using jumper cables—follow exactly the procedure outlined below, being careful not to cause sparks which could ignite any hydrogen which might be present when attaching jumper cable clips to the two batteries.

When attaching jumper cables—First, attach one end of one jumper cable to the positive terminal of the booster battery (identified by a "+" or "P" on the battery case, post, or clamp) and the other end of the same cable to the positive terminal of the discharged battery.

6

Second, attach one end of the remaining cable to the negative terminal ("—" or "N") of the booster battery, and finally to the negative terminal of the discharged battery—taking care that none of the jumper clips contact each other.

Reverse this sequence exactly when removing the jumper cables.

CAUTION: Any procedure other than the above could result in personal injury caused by electrolyte squirting out the battery vents, damage or injury due to battery explosion, and/or damage to the charging system of the booster vehicle's or immobilized vehicle's charging system.

CAUTION: Do not attempt to jump start a frozen battery. If a frozen battery is suspected, open and examine all fill vents on the battery. If ice can be seen, or the electrolyte fluid cannot be seen, do not attempt to start with jumper cables.

TOWING, GENERAL

CAUTION: Attachment should NOT be made to bumpers or bumper brackets for towing.

When vehicle is towed in a manner that requires hoisting one end off the ground, this is to be done only with a sling-type attachment hooked to main structural members of the car.

Always use safety back-up chains crossed under the tow bar in a manner that will retain the vehicle if the primary attachment fails or breaks free, preferably attached to different structural members than those used for the primary attachment.

When towing vehicles on the front wheels, the steering wheel should be secured to maintain a straight ahead position. NOTE: Do not use the locking feature of the Anti-Theft Lock to secure the front wheels for towing purposes.

CAUTION: For towing, the Parking Brake should be released, the transmission should be in neutral and the engine ignition should be "off", but the Anti-Theft Steering Column Lock must not be in the "lock" position.

Towing—With ignition key available—Normally your Cadillac may be towed with all four wheels on the ground for distances up to 50 miles at speeds of less than 35 mph. However, the drive wheels (front wheels on Eldorado), must be raised

off the ground or the drive shaft disconnected when the transmission is not operating properly or when a speed of 35 mph or distance of 50 miles will be exceeded.

Towing—Without ignition key—Since the Anti-Theft Steering Column Lock locks the steering and shift controls as well as the ignition system, special provisions are necessary for towing a vehicle when the switch is in "lock" position. Normally it will be necessary to place a dolly under the rear wheels and tow the vehicle with the front end raised. Detailed towing information is available at your dealer and has been provided to tow truck operators responsible for movement of disabled or locked vehicles. Proper lifting and towing equipment is necessary to prevent damage to the vehicle during the towing operation.

INSTRUMENTS

Fuel gage—A vertical fuel gage is used on all 1970 Cadillac cars. The fuel gage is located on the upper left side of the instrument cluster to the left of the speedometer. It registers only when the ignition is on.

NOTE: The fuel gage pointer is of the balanced type and may not return to "Empty," but may

7

stop at any point on the dial when ignition is turned off. The last few gallons of gasoline must be added very slowly to completely fill fuel tank.

Water temperature light—If coolant temperature becomes too hot, a red warning light, labeled "WATER TEMP," located on the right side of the instrument cluster, will glow. If the light glows while the engine is running, the car should not be driven until the cause of the overheating has been corrected by an Authorized Cadillac Dealer.

NOTE: In normal operation, the light will glow during engine cranking. Also, after a long drive, the light may glow briefly when the car is restarted after a short stop.

The pressure controlled radiator overflow will normally prevent coolant loss up to 259°F.

CAUTION: Before removing radiator cap, see page 70.

Engine temperature light—If engine metal temperature becomes too hot as a result of excessive coolant loss, a red warning light, labeled "Engine Temp", located on the right side of the instrument cluster, will glow, and an audible warning buzzer will sound inside the car. Should this occur, stop the car immediately and have the condition causing the overheating corrected. If there is evidence of steam, do not open hood until steam is dispersed.

Brake system warning light—A brake system

warning light, labeled "BRAKES", is located on the left side of the instrument cluster. This warning light will glow during engine cranking to assure the operator it is not burned out. If the light does not come on, have your Cadillac dealer correct the trouble as soon as possible. This warning light is designed to glow red while braking in the event of a pressure deviation between the front and the rear wheel brake lines. If this happens, it may mean that braking effectiveness is impaired. It will be possible to bring the vehicle to a stop, but depending on the severity of the malfunction, greater pedal force and pedal travel may be required and stopping distances may be increased. The cause should be determined and any problem corrected as soon as possible.

NOTE: This warning light is not a substitute for visual checking of the fluid level in the master cylinder, which is a normal maintenance item at intervals specified on page 62.

Oil pressure indicator light—If engine oil pressure is low, a red indicator light, labeled "OIL", located on the right side of the instrument cluster, will glow. Under normal conditions this light will glow when the ignition is turned on, but will go out when the engine is running. If it does not go out,

the car should not be operated until the cause of the low oil pressure has been corrected by an Authorized Cadillac Dealer.

Generator indicator light—A red indicator light for the charging circuit is located on the left side of the instrument cluster. The light, labeled "GEN", glows whenever the generator is not charging. In normal operation, it will light when the ignition is turned on and will go out when the engine starts. The light will also glow, but not as brightly, when the ignition switch is in the accessory position. If it glows while the engine is running, have your car checked by an Authorized Cadillac Dealer.

Speedometer and odometer—The speedometer indicates car speed. The odometer indicates distance traveled. The odometer is divided into two sections—the left half records accumulated mileage and the right half indicates trip mileage. A reset knob for the trip mileage is located in the instrument cluster below and to the right of the odometer. To reset trip mileage, push in on the reset knob and turn it clockwise until all zeros appear. Repeat the operation until all zeros again reappear.

INSTRUMENT PANEL AND CONTROLS

Your new Cadillac has easy to read dials and instruments, and controls that are designed for your convenience. Only a few minutes review is needed to gain an understanding of the proper use of these instruments and controls. Refer to the illustration on page 10 to acquaint yourself with the instruments and controls on the instrument panel.

GOOD DRIVING PRACTICE: A good driver familiarizes himself with the controls of any automobile BEFORE operating it.

Windshield wipers and washers—The windshield wipers are concealed below the rear of the hood and rest on the windshield lower molding when not in use. Both wiper blades move in the same direction at the same time and stop to the right in the park position.

The windshield wiping system is designed to wipe designated areas of the windshield clear under most inclement weather conditions. The windshield wipers operate electrically and are not affected by engine operation.

The windshield wiper and washer controls are

INSTRUMENT PANEL COMPLETE

located on the instrument panel extension on the upper forward portion of the left front door. Three-speed operation is provided. To operate the wipers, move the control lever to "LOW", "MEDIUM" or "HIGH" position. Do not try to move the wiper blades by hand or attempt to run the wipers if the blades are frozen to the windshield lower molding.

NOTE: If recessed windshield wipers are frozen in place, break them free the same way you would exposed wipers by using your regular windshield ice scraper to chip the ice and jar the wiper assembly loose.

Windshield washers, each incorporating a dual spray feature, are provided for cleaning the windshield. The washers deliver solution to the windshield before the first cycle of the wipers. Pushing in on the WASH button, located just below the wiper control lever, automatically sprays solution on the windshield and actuates the wiper blades to operate at low speed. When washing action is completed, move the wiper lever to the "OFF" position. **NOTE:** The washers may not operate as effectively at extremely low temperatures or while traveling at high speeds.

CAUTION: Have the fluid level in the windshield washer reservoir checked regularly, with special attention to keeping the reservoir filled during periods of heavy use. GM OPTIKLEEN should be used as directed to prevent freezing damage and for better cleaning of the windshield under all conditions. Do not use radiator anti-freeze because this will cause paint damage.

LIGHTS

Headlight controls—The control knob for the headlights, tail lights, parking lights, side marker lights and instrument panel lights is located on the lower left hand corner of the instrument panel. All lights, except the headlights, come on when the control knob is pulled halfway out. When the knob is pulled all the way out, the headlights come on and all other lights remain on.

Instrument panel lights can be increased or decreased in intensity, or turned off, by rotating the control knob.

GOOD DRIVING PRACTICE: A good driver turns on his headlamps at early dusk, and during bad weather, to help other drivers see his car from a

distance, even though he himself may still be able to see the roadway adequately.

The headlamp circuits are protected by a circuit breaker in the light switch. An overload on the breaker will cause the lamps to "flicker" on and off. If this condition develops, have your headlamp wiring checked immediately.

CAUTION: It is the owner's responsibility to check all lights, signaling systems and warning lights frequently to be sure they are working properly. Headlight aim should also be checked periodically. It is important that any malfunctions be corrected promptly for your safety, and for the safety of others.

Headlight dimmer switch—The headlight dimmer switch permits you to select the correct headlight beam for different types of driving. All four lights are on when you use the high beam for highway driving . . . only the outboard lights are on for low beam city driving. Select desired beam by depressing the foot switch located on the floor just below the parking brake pedal. When the headlights are on high beam, an indicator light below the 60 MPH mark on the speedometer dial glows red.

GOOD DRIVING PRACTICE: Always use the "low beam" when approaching or following other cars.

Side marker lights and reflexes—Your Cadillac is equipped with front and rear side marker lights

and reflexes that provide additional side identification so the car is more visible to other motorists at night. Whenever the headlights or parking lights are on, the front and rear side marker lights also are on. They are activated by pulling out the headlight control knob and are lighted in both positions of the control knob.

The front side marker lights and reflexes are combined with the cornering lights in the front fenders. When the headlights or parking lights are on, the front side marker lights glow amber. Front

side marker lights do not affect normal operation of the cornering lights that emit a white beam when activated. Combination rear side marker lights and reflexes are mounted vertically on the outboard side of the tail lights, and light up red. Also, rear reflexes only, are located below the tail lights in the rear bumper outer ends.

Cornering lights—Cadillac front fender cornering lights operate in conjunction with the turn signals. When the turn signal is operating in either direction, with the headlights or parking lights on, the corresponding cornering light emits a steady sideward beam to provide additional illumination when turning corners.

Map light—A map light is located in the center of the instrument panel to the left of the glove box. The map light is operated manually by a switch above the light.

Back-up lights—The back-up lights on all cars except the Fleetwood Eldorado are located in the rear bumper. On the Fleetwood Eldorado, a single back-up light is located in the center of the trunk lid on the fuel filler access door.

The back-up lights go on automatically when the transmission selector lever is placed in the

reverse "R" position with the ignition switch on. Back-up lights provide additional rear lighting to aid in parking and backing the car.

Courtesy lights—A combination courtesy light and red warning light (red reflector only on some styles) is located on the side of the armrest on each door. The forward lens is white and serves as a courtesy light. The rear lens is red and serves as a warning to others at night when the door is opened. Courtesy lights are also located under the instrument panel, on each side of car, and on the upper rear quarter trim panels. On the convertible style, courtesy lights are located on the front of the rear armrests. On cars equipped with bucket seats, an additional courtesy light is located on the rear of the center console.

The courtesy lights illuminate the interior of the car when any door is opened. When all doors

are closed, full counterclockwise position of the headlight control knob turns on all courtesy lights, as well as the red warning lights on the doors.

On the Fleetwood Brougham Sedan, adjustable reading lights are located on the upper rear quarter trim panels. These lights can be adjusted individually to direct illumination where desired by rear seat passengers, thus reducing glare for the driver. These lights can be operated separately by a manual switch located rearward of each light. On the Fleetwood Sixty Special Sedan, a switch is centrally located on the back of the front seat for manual operation of the rear courtesy lights in the upper trim panels.

Turn signals and lane change feature—The turn signal lever is located on the left side of the steering column immediately under the steering wheel. The lever is moved upward to signal a right turn and downward to signal a left turn. Lamps on the front and rear of the car transmit this signal to other motorists and pedestrians. The ignition switch must be in the "ON" position in order for the turn signals to be operational. This feature prevents battery drain if the lever is left in an "ON" position when the car is not in use.

In a normal turning situation, such as turning a corner, the turn signal is canceled automatically after the turn is completed. However, in some driving maneuvers, such as changing lanes on an expressway, the steering wheel is not turned back sufficiently after completing the turn to cancel the turn signal automatically. For convenience in such maneuvers, the driver can flash the turn signals by moving the turn signal lever part way (to the first stop) and holding it there. The lever returns to the neutral or canceled position when the driver releases his hold on the lever.

A green light on the instrument cluster flashes to indicate proper operation of the front and rear turn signal lamps. If the indicator lamp remains on and does not flash, check for a defective signal lamp bulb. If the indicator fails to light when the lever is moved, check the fuse and indicator bulb.

FOUR-WAY HAZARD WARNING FLASHER

In the event your car is disabled or you stop for any reason on the highway, the four-way hazard warning flasher system on your vehicle (front and rear signal lamps), should be used to warn other drivers that your vehicle is a traffic hazard. However, you should do everything possible to avoid stopping on the highway proper. The hazard warning system is activated by pushing in on the button located just below the steering wheel on the right side of the steering column. When the system is operating, the turn signal indicator(s) on the instrument cluster will flash simultaneously. Use this system night or day, but only when your vehicle is stopped on or near the roadway, or otherwise constitutes a traffic hazard. The hazard warning flasher may be canceled by pulling the button outward.

CAUTION: Use of the hazard warning flasher while the vehicle is moving is prohibited in some states (or provinces in Canada).

NOTE: The hazard warning flasher will operate with the ignition in the lock position and the key removed, allowing the car to be locked while help is sought.

CAUTION: If the brake pedal is depressed when the hazard warning flasher is in operation, the lights will not flash but will glow continuously instead.

Electric clock—A fully automatic electric clock is located in the instrument cluster to the right of the speedometer. To reset, push in on the reset knob and rotate it in the same direction you want the minute hand to move, until the hands register the correct time. Resetting the clock in the forward direction will automatically regulate the clock to run approximately 20 seconds faster per day, while resetting it backward will regulate it to run slower. If more than a 20-second adjustment is desired, resetting the clock again after 12 hours

have elapsed will adjust it to run an additional 20 seconds faster or slower.

NOTE: Rotate the reset knob only in the direction of the correct time. The slightest initial movement accidentally made in the opposite direction will regulate the clock in that direction.

To assure accurate time-keeping, your clock should be removed for cleaning and oiling every two years by your Cadillac Dealer, who will be pleased to send it to an authorized clock repair station for necessary maintenance at reasonable cost.

Ash trays and lighters—An illuminated ash tray and lighter is located below the radio to the right of the steering column for the convenience of the driver and center passenger. The ash receptacle is large enough to hold a pipe. A separate ash tray and lighter is provided on the right front door armrest. The ash tray can be taken out for emptying by grasping the finger recess and sliding the ash tray up and out.

Rear combination ash trays and lighters are provided on all cars except Calais styles, which are equipped with ash trays only.

Power windows—Power windows on all 1970 Cadillac cars have an ignition interlock so the windows cannot be operated unless the ignition switch is in the "on" or "accessory" position. Reminder: Remove the ignition key when the vehicle is not attended by a responsible person. A master control for all windows is provided at the driver's position. Individual switches are provided under each window for passenger use.

Window lock-out switch—A window lock-out switch is provided at the window master controls. When activated, the lock-out switch prevents operation of windows from the passenger's individual switches. The switch has two positions, marked "NORMAL" and "LOCK". In the "NORMAL" position with the ignition "ON", all windows may be operated by the master controls or each individual window switch. To prevent passengers from operating any windows, as in the case with small children in the car, place the switch in the "LOCK" position. Only the master controls will remain operative. All window switches, including the master controls, are inoperative when the lock-out switch is in the "NORMAL" or "LOCK" position with the ignition "OFF".

TRANSMISSION

Your 1970 Cadillac is equipped with a Turbo Hydra-matic transmission. Automatic transmission shift quadrants of all GM cars continue the uniform sequence of selector positions. This particularly benefits multicar families and those who occasionally drive other cars. Shift indicators are arranged with "Park" position at the left end, followed in sequence by "Reverse," "Neutral," "Drive" (left and right positions) and "Low". All automatic transmissions are equipped with a starter interlock system designed to permit starting the engine only when the transmission selector is in the "Park" or "Neutral" position. For additional engine braking effect, as sometimes needed in mountain-

ous driving, place the transmission in the right hand "Drive" position or "Low" range.

CAUTION: When parking or leaving the car unattended, even for a few minutes, place the transmission shift lever in "Park" position, lock the ignition, remove the ignition key and fully apply the parking brake.

An arrangement of steps in the steering column restricts a straight line movement of the shift lever. It is necessary to pull up on the lever when shifting into and out of park "P", when shifting out of neutral "N" into "Drive" or reverse "R", when shifting from the left hand "DRIVE" position to the right hand "DRIVE" or Low "L" position.

"Drive" range—left hand—In drive range, with the indicator in the left hand "DRIVE" position, three forward speeds are available. The left hand

"DRIVE" position is used for all normal driving. This permits the transmission to operate through its complete range of gear ratios and select the proper gear ratio for road and load conditions.

PASSING—For passing situations requiring moderate accelerations, the throttle may be depressed part way without causing the transmission to shift. If maximum acceleration is required, push the accelerator all the way down, which will automatically shift the transmission into the best gear ratio for maximum performance.

"Drive" range—right hand—In hilly terrain—the right-hand "DRIVE" position may be used. The right-hand "DRIVE" position reduces shifting on hills, provides more control on slippery pavement, and decreases brake usage when descending medium grades. It may be selected at any car speed. Also, Drive (right) has the same starting RATIO as Drive (left), but prevents the transmission from shifting above second speed to retain acceleration when extra performance is desired. Engine braking is provided in this range.

"L" low range—"L" Low range provides maximum engine braking assist. A shift from either "DRIVE" position to low "L" can be made while traveling at moderate speeds.

GOOD DRIVING PRACTICE: Before descending a steep or long grade, down a mountain or hillside, reduce speed and shift into a lower gear. Use the brakes sparingly to prevent them from overheating and thus reducing brake effectiveness.

CAUTION: Use caution when shifting into lower gear ratios on slippery surfaces, with vehicle moving—the abrupt braking action could cause the driving wheels to skid.

"R" reverse—To back up your car, first bring it to a complete stop, then move shift lever to reverse "R" position. The shift lever cannot be moved to reverse "R" from neutral "N" or any "DRIVE" position without pulling up on the lever. It is also necessary to pull up on the lever when shifting to reverse "R" from park "P" position.

"N" neutral—If it is necessary to re-start the engine with the car rolling, the engine should be started with the transmission shift lever in the neutral "N" position.

"P" park—Use the brakes to stop the vehicle from rolling before placing the shift lever in Park.

To engage the Park position, lift the lever toward the steering wheel and rotate as far to the left as possible before releasing. Check for proper

MAINTAINING SAFETY AND DEPENDABILITY

Listed below are a number of vehicle features that should be periodically checked to help maintain continued safe and dependable vehicle operation. Some will require physical checks, either while parked or driving, while others can be accomplished by simple visual inspections. In certain other instances, you should ask your dealer or service station to check the items when your vehicle is in for regular maintenance. Because weather and atmospheric conditions, varying road surfaces, individual driving habits and vehicle usage have a considerable effect on the need for replacing or adjusting these items, a single uniform service interval recommendation for all drivers is not always practical for every item.

TIRES—Tires will wear under normal use and require replacement periodically throughout the life of the vehicle. Original equipment tires incorporate built-in tread wear indicators to assist in determining when your tires have been worn to the extent that replacement is needed (described on page 78). Whenever your car is on the hoist for service, have your serviceman take a good look at your tires, checking them for excessive wear, cuts, nails, etc. Check too that all wheel nuts are tight, and that each wheel is running true (no wobble, as would occur with bent wheels).

Improper inflation, rapid acceleration, quick stops, fast cornering, high speeds and heavy loading adversely affect tire life and can cause uneven wear. Tires should be rotated every 6,000 miles for more uniform wear and maximum life. Check inflation pressure at least monthly.

WHEEL ALIGNMENT AND BALANCING—Wheel alignment and balancing contribute greatly to longer tire life and better vehicle handling. The need for wheel alignment service will generally be indicated by abnormal tire wear, and in some cases, by a noticeable pull to the right or left when

driving on a straight level road. The need for wheel balancing may be indicated by a chattering or shimmying condition at the steering wheel or by a front end bounce or noise. Take your car to your dealer or a qualified wheel alignment shop whenever the need for wheel alignment or balance is indicated or suspected.

BRAKES—Brake lining wear will vary depending upon driving conditions and driving habits of each individual driver. Brake linings, as well as the other internal brake components at each wheel (such as drums, discs, wheel cylinders, etc.) should be checked by a competent mechanic at least every 12,000 miles or more often if driving conditions and habits result in frequent brake application. Parking brake adjustment should be checked whenever brake linings are checked, and front wheel bearings should be lubricated whenever brake discs are removed. Owners should periodically check parking brake function by parking on a steep hill, restraining the vehicle with the parking brake only. Following this, check the "Park" mechanism of automatic transmissions by releasing all brakes with the transmission

17

selector lever in "P" position. If either mechanism does not hold, have needed adjustments or repairs made by a competent mechanic.

The brake fluid in the master cylinder should be checked at every oil change. Any significant loss generally means that a malfunction is developing in the system. A low fluid level in the front brake reservoir could be an indicator that the disc brakes need retriming. If loss is noted, the cause should be determined and corrective action taken immediately. Any noticeable increase in brake pedal travel should also be brought to the attention of your serviceman, since this could also indicate brake fluid loss, improper brake adjustment or other brake malfunctions. Check your (dash purpose) brake warning light when you start your car, as set forth on page 8. See page 21 for detailed information on the function of automatic brake adjusters and how to use them.

BRAKE LINES AND BRAKE HOSES—Brake lines and brake hoses should also be periodically checked for proper attachment, leaks, cracks, chafing, deterioration, etc. Ask your serviceman to check brake lines and hoses when your car is on the hoist for oil change or lubrication service. Any questionable parts noted should be replaced immediately by a qualified mechanic.

EXHAUST SYSTEM—Each time the vehicle is raised for lubrication or oil change service, the complete exhaust system and adjacent body areas

should be inspected for broken, damaged, or mispositioned parts, deterioration, open seams or loose connections, which could permit exhaust fumes to seep into the passenger compartment. Exhaust system leaks may sometimes be indicated by excessive under-car noise or the smell of exhaust fumes inside the car. Leaks may also be indicated by "smoke" coming from under the car after starting, particularly on a cold day. Any signs of leaks or other exhaust system deterioration should be discussed with your serviceman and necessary corrections made immediately. Exhaust system pipes and resonators rearward of the mufflers should be replaced whenever a new muffler is installed.

LIGHTS—As with any household light bulbs, the light bulbs in your car will eventually burn out and require replacement. License plate lights, side marker lights, headlamps, parking lamps, tail lamps, brake lights, turn signals and hazard warning flashers should be checked periodically. Have your serviceman check them during a regular maintenance visit or have a member of your family observe light operation while you activate the brake pedal and switches involved. Have any malfunctions corrected for your benefit and for the benefit of other drivers too.

Headlamp aim should also be checked periodically. Frequent signaling by oncoming motorists when you are using your low beams is a good indication that headlamps are improperly aimed. Likewise, poor visibility when driving

18

on a dark road may indicate improper aim. Have your dealer or a qualified service station check headlamp aim at least once a year and be sure to have replacement units aimed properly at time of installation or following a front end collision.

STEERING—Power assist is provided by a hydraulic pump driven by the engine. When the engine is not running, or if the power steering pump drive belt should break, there is no power assist; therefore, much greater steering effort will be required. A loud squealing noise when making a full right or left turn is usually an indication of improper belt tension. The pump belt, as well as the other engine drive belts, should be checked periodically and adjusted or replaced as necessary.

Power steering lines and hoses should be checked for leaks, deterioration and chafing at every oil change. The power steering pump fluid level should also be checked at the same interval. In addition, your serviceman should be asked to visually check the condition of all steering linkage whenever your vehicle is raised for lubrication or oil change service. This should include an inspection of the pitman shaft, tie rod, idler arm, and steering knuckle attachments. Needed adjustments or replacements should be made promptly.

OTHER FEATURES—Many features provided for safety of vehicle operation

could become ineffective because of wear, misalignment or misadjustment occurring during normal use or as a result of misuse or abuse. Periodically, the driver should check performance of these features, as listed below, to determine that they are performing properly, or if repairs or adjustments are needed.

ANTI-THEFT LOCK—Check that it will lock in only the PARK position by attempting to turn key to LOCK in some other transmission selector position, with car stationary.

SEAT BELTS—Lap belts and shoulder belts, as well as buckles, retractors and anchors, should be checked for loose connections, damage and proper latching action. Any questionable parts should be replaced.

WINDSHIELD WIPERS AND WASHERS—Continued good windshield wiper and washer performance is important to good driver vision. Drivers should check performance of both systems, particularly in regard to the condition and alignment of wiper blades, and the amount and direction of fluid sprayed by the washers. Blades should be replaced and wipers and/or washers should be serviced whenever vision is impaired.

DEFROSTERS—Defroster performance could be adversely affected by malfunctions in the heater/defroster wiring or air distribution systems,

which develop during vehicle use. Drivers should check defroster performance by turning controls to "Ice" ("Defrost" on cars not equipped with air conditioning) and noting whether a good supply of air is directed against the windshield. Cause of weak or mis-directed air flows should be determined and corrected by your Cadillac dealer.

STARTER SAFETY SWITCH—Check by placing the transmission in each of the driving gears and attempting to start the engine. The starter should operate only in park "P" or neutral "N".

CAUTION: Be sure to have a clear distance ahead and behind the car, set the parking brake and firmly apply the foot brake. Do not depress accelerator pedal. Be prepared to turn off ignition switch immediately if engine should start.

TRANSMISSION SHIFT INDICATOR—Check the automatic transmission selector lever indicator each time you drive the car, to be sure it accurately indicates the shift position you select.

HORN—Blow the horn occasionally to assure that it works.

SEAT-BACK LATCHES—Check that seat-back latches are holding firmly, by giving an emphatic yank at the seat-back top, when latches are latched.

REARVIEW MIRRORS AND SUN VISORS—Check that friction joints are

property adjusted so mirrors and/or sun visors stay in the desired position. It may be necessary to have the friction joints adjusted for best performance.

DOOR LATCHES—If for some reason doors do not close, latch or lock properly, your dealer should be consulted without delay for evaluation and correction of the problem.

HOOD LATCHES—Check to make sure the hood closes easily but firmly, by lifting on the hood after closing. Check also for broken or damaged or missing parts which might prevent secure latching of the hood, especially after any front end collision.

FLUID LEAKS—Inspect your vehicle periodically for fuel, water or oil leaks; and have repaired as needed. A good way to check is to observe the ground beneath the vehicle after it has been parked for a while.

For your convenience, all of the checks discussed in this section that would normally be made by the car owner are listed in the "Owner Safety Checks" chart on page 61. The other services discussed that would normally be performed by your dealer or service station are included in the "Maintenance Schedule" on page 62. Perform the checks and services as indicated to help maintain the safety and dependability originally built into your Cadillac. Whenever malfunctions are discovered, they should be corrected as soon as possible by a competent mechanic.

engagement by pushing the lever away from the steering wheel and making sure that lever will not rotate to the right.

The transmission shift lever must be in the park "P" position and the ignition knob in the Lock position before the ignition key can be inserted or removed.

Park position should always be used to lock the drive wheels of the car when the driver intends to leave the vehicle or in any situation where the driver's attention may be diverted such as the entrance or exit of passengers, mirror adjustments, etc.

Putting the lever into Park position after parking insures that it will be in the proper position to start the engine. When the vehicle is stationary, the lever should be in Park before the ignition key is turned to start.

Use Park position when engine must be idled more than several minutes, particularly in hot weather.

When parking on hills or steep inclines, and when stopping or leaving the car unattended, even for a few moments, place the shift lever in the park "P" position to lock the drive wheels. Also apply the parking brake and turn the front wheels

toward the curb.

Rocking the car—If it becomes necessary to rock the car to free it from sand, mud or snow, move the selector lever from "D" to "R" in a repeat pattern while simultaneously applying moderate pressure to the accelerator. Do not race engine and avoid spinning wheels when trying to free the car. Avoid rocking car for prolonged periods of time.

BRAKES

Your Cadillac is equipped with power brakes. Disc brakes for front wheels only, are installed on all 1970 Cadillac cars. The service brake system is designed for braking performance under a wide range of driving conditions even when the vehicle is loaded to its full rated vehicle load. When replacement parts are required specify GM and United Delco parts.

CAUTION: Driving through deep water may affect brake performance. Applying the brakes lightly will indicate whether they have been affected. To dry them quickly, lightly apply the brakes while maintaining a slow forward speed with an assured clear distance ahead until brake performance returns to normal.

The service brake system is designed so that in the event of a hydraulic fluid leak in one half of the system, the other half still provides some braking action. A signal light incorporated in the instrument cluster warns the driver of such a partial failure of the brake hydraulic system. In the event of broken brake lines, major brake fluid loss, air in the brake lines or a pressure differential between the front and the rear wheel brake lines, the light will come on and stay on while braking. In this event, the vehicle should not be driven until the cause has been determined and, if necessary, corrected.

NOTE: This device is not to be considered as a substitute for visually checking the fluid level in the master cylinder, which is a normal maintenance item at specified intervals.

Automatic brake adjusters—All Cadillacs are equipped with self-adjusting brakes designed to eliminate periodic brake adjustments. The self-adjusting mechanism is actuated, as needed, whenever the car is moved in reverse and the brakes are applied. It is possible, however, for excessive brake pedal travel to develop if the required reverse movement with a brake applica-

tion does not take place during a prolonged period of stop and go forward driving. Should this occur, the car should be driven backward and forward with the brakes applied firmly at the end of each rearward movement, until the brake pedal travel is back to normal. If this procedure fails to restore normal pedal travel, or if any abnormally rapid increase in pedal travel is experienced, immediate inspection should be made by your Authorized Cadillac Dealer.

CAUTION: Brake pedal travel should not be obstructed by improper floor mats or other interfering material under the pedal.

CAUTION: "Riding the brake" by resting your foot on the brake pedal when not intending to brake can cause abnormally high brake temperatures, excessive lining wear and possible damage to the brakes.

Power brakes—Cadillac power brakes use engine vacuum to reduce the braking effort. The system has a vacuum reserve which will supply two or more power assisted brake applications after the engine has stopped. After the vacuum reserve has been exhausted, the vehicle can be stopped

by applying greater force to the foot pedal. In the event of power assist being lost, the use of both feet on the pedal will result in a normal braking feel. The power brake pedal is sufficiently wide to accommodate the use of both feet.

Brake lining

CAUTION: Brake linings should be inspected periodically for wear by a qualified mechanic. The frequency of this inspection depends upon driving conditions in your area, such as traffic or terrain, and also the driving techniques of individual owners. Your Cadillac Dealer is best qualified to advise you as to how often this inspection should be performed. When brakes require relining, use Genuine General Motors Parts and Delco fluid as required.

Braking on hilly terrain—The transmission is designed to supplement the braking system when driving on hilly terrain. To decrease brake usage, place the transmission selector lever in the right-hand "DRIVE" position when descending medium grades and in the Low "L" range for maximum engine braking assist when descending steep grades.

Parking brake—The parking brake operates

independently of the regular foot brake hydraulic system. It is applied by fully depressing the foot pedal which is located to the lower left side of the front compartment under the instrument panel. With the engine running, the parking brake will remain in the locked position only when the transmission is in "Park" or "Neutral". The parking brake will release automatically when the transmission selector is moved to any drive position with the engine running. A definite sound should be heard when the pedal releases. Do not drive the car unless the parking brake is completely released.

Should it be necessary to release the brake manually, pull on the hand release lever located on the upper right side of the parking brake assembly. When pedal travel of the parking brake exceeds approximately five inches, it should be adjusted by your Authorized Cadillac Dealer.

As a precaution when parking on hills, it is advisable to turn the wheels toward the curb, lock

the drive wheels by placing the transmission selector in "Park" position and place the parking brake in its fully depressed position. Also, when leaving the car unattended, always place the selector lever in "Park" position and fully apply the parking brake.

POWER STEERING

Cadillac's variable ratio power steering provides ease in handling, parking, and getting into or out of tight places. Power steering assist is provided by a hydraulic pump driven by the engine. When the engine is not running, or if the power steering pump drive belt breaks, the car can still be steered, but much greater steering effort will be required.

HORN

The horn is actuated by depressing the Cadillac crest located in the pad in the center of the steering wheel, or any of the three raised areas near the ends of the pad.

VENTILATION AND HEATING

On cars not equipped with air conditioning, an upper level-lower level ventilation system is provided to circulate outside air through the pas-

senger compartment. Ventilating air enters the car through an opening at the base of the windshield and is discharged into the passenger compartment either through grilles in the cowl side trim panels (lower level) or through grilles in the instrument panel, one on the left and one

on the right side (upper level). On Calais and DeVille styles air exhaust grilles are incorporated into the door lock pillars to allow air to leave the car, providing positive air flow even when windows are closed.

Separate control knobs for each of the ventilation outlets are located in the cowl side trim panels. The upper knobs control air flow from the grilles in the instrument panel; the lower knobs control air flow from the grilles in the cowl side trim panels. Pulling out the knobs opens air doors which admit air to the grilles. The knobs can be pulled out partially or all the way to admit as much air as desired. The vanes in the left outlet on the instrument panel can be set to direct air to the right or left; those in the outlet on the right will direct air up and down. The up and down louver travel on the out-board portion of the right outlet is restricted to make it more convenient to use the ashtray in the right hand door armrest.

Heating—The Cadillac standard heating system draws outside air from an opening at the base of the windshield, circulates it through a heating unit located on the right side of the cowl in the engine compartment, and discharges it into the passenger compartment from a distributor located

just below the instrument panel at centerline of car. In normal heater operation most of this air is directed to the floor with a fixed percentage continuously diverted to the windshield to prevent fog formation. When more de-fogging or de-icing capacity is required, almost all the air can be directed to the windshield.

Heater control operation—On cars not equipped with air conditioning, the heater controls are located on the instrument panel just to the left of the steering column. The controls are illuminated when instrument panel lights are on.

The lower lever turns the heater on and off and controls the temperature of the air being delivered into the car. The upper left lever controls fan speed; three speeds are provided. The position of the upper right lever determines whether the air is delivered to the floor or to the windshield;

at "HEAT" most of the air is directed to the floor—at "DEFROST" most of the air is directed to the windshield.

For maximum heat and quickest warmup in cold weather place the lower lever in its extreme right position and the fan switch at "HI". If it is necessary to remove some fog during this period move the upper right lever to "DEFROST".

WINDSHIELD DEFROSTING AND DEFOGGING

The windshield defrosting and defogging system assists in providing good visibility through designated areas of the windshield under most inclement weather conditions. The following procedures are recommended to assure optimum operation of the system:

1. Scrape deposits of frost or ice from windshield and other windows as required before operating car.
2. With a full passenger load in cold weather operate the fan at medium or high speed to prevent fog buildup on windows. The temperature of the heater air can be regulated to prevent overheating by moving the lower control lever to the left.

CAUTION: In inclement weather, clear snow or ice from cowl air inlets. This will improve heater and defroster efficiency and reduce formation of fog or frost on the inside of the windshield during initial operation under certain atmospheric conditions. Also, clear the windshield, rear window, outside mirrors and all side windows of ice or snow prior to operation of the vehicle. This will improve driver's vision during initial operation.

DOOR LOCKS

Front and rear doors can be locked from the inside by depressing the passenger guard door lock buttons located on the upper door panel. All doors can be locked from the outside by first depressing the door lock button and depressing the outside door handle plunger while closing the door.

The front doors can also be locked by using the key.

All models have as a standard safety feature overriding door locks. When the doors are locked, the door latch mechanism is inoperative, preventing inadvertent opening of the door by movement of the inside handle.

CAUTION: Always lock the doors when driving, for greater security in the event of an accident and for security against unauthorized entries. Avoid pushing on the door glass when opening or closing the doors—instead, use the handles.

DUAL-ACTION SAFETY HOOD LATCHES

The hood latch is operated in two steps by means of a lever. The release lever is accessible between the grille and hood panel, to the right of center

when viewed from front of car. Apply pressure to this lever, forcing it upward. The hood will release but will be prevented from opening further by a secondary latch. Further movement of the lever will release the secondary latch, allowing the hood to be raised. To close hood, pull hood down gradually until it will drop of its own weight. Always check to make sure hood is properly secured.

LUGGAGE COMPARTMENT

The lid on the luggage compartment is counter-balanced for easy opening. It has a key-lock release. To open, insert the key with the oval head into the lock, which is located behind the crest, turn key in a clockwise direction to release lid. An interior light goes on when lid is raised. To close, pull to a position six or eight inches from closing, remove key and push lid firmly downward. This automatically locks luggage compartment.

Folding seat-back latches—Folding seat-backs (except auxiliary seats in limousines) are equipped with self-latching mechanisms and release controls designed for the convenience of entering and exiting passengers.

A manual release control is provided on each folding front seat to unlock the seat-back. The

release control is located on the upper portion of the seat side panel on cars without power door locks and on the outer lower corner on back of the seat on cars with power door locks. On all Fleetwood Eldorados, the release control is centrally located on back of the seat.

To fold the seat forward, depress the release control to unlock the seat-back. The seat-back locks into place automatically when the seat is in the upright position.

On coupe styles equipped with power door locks, both front seat-backs unlock automatically when either front door is opened and lock when both doors are closed. Also, the seat-back can be unlocked by actuating the manual release control.

FRONT SEATS—MANUAL ADJUSTMENT

If your car is equipped with a manually operated front seat, it can be adjusted forward or rearward. Move the lever forward on the driver's side of the seat and adjust to the most comfortable driving position. Then release the lever to lock the seat in this position. The seat-back also tilts forward or rearward slightly when the seat is moved.

REAR SEAT FILLER PANEL

CAUTION: The filler panel between the rear seat and the rear window should not be used for storage—even of lightweight, small articles. They might become dangerous projectiles during a collision or sudden stop; larger items may also reduce vision to the rear.

Additional seat positioning—Additional rearward positioning of the front seat can be made on all cars except the Fleetwood Sixty Special Sedan

and Brougham, the Limousine style and the Commercial Chassis, by having your Cadillac Dealer reposition the seat one inch rearward at the attachment to the floor. Also, auxiliary seats on the Fleetwood Seventy-Five Sedan and Limousine can be adjusted to provide additional leg room for auxiliary seat or rear seat passengers and the angle of the front seat-back on the Seventy-Five Sedan can be changed to provide more room for auxiliary seat passengers.

OCCUPANT RESTRAINT BELTS

Lap and shoulder belts provide added security and comfort for you and your passengers. Proper use and care of these belts will assure continuance of this security.

Lap belts—Lap belts are provided for all seating positions on all cars (except auxiliary seats in Limousines). After the front seat has been adjusted to the satisfaction of the driver, grasp the buckle end and the flat metal "eye" end of your individual belt assembly and position the belt across the lap as **LOW ON THE HIPS AS POSSIBLE**. Insert the metal eye into the open end of the buckle until an audible snap is heard. Make sure the connection is secure and adjust the belt to a **SNUG FIT** by

pulling on the end of the belt extending from the buckle. The snug and low positions are essential in order that the force exerted by the lap belt in a collision may be spread over the strong hip bone structure and not across the soft abdominal area.

For retractor equipped belts, pull the retractor half of the belt to a solid stop to make sure that the belt webbing is completely unwound from the retractor drum, then connect the belt and make the necessary adjustments at the buckle for proper fit. To lengthen a lap belt, place the buckle at a right angle to the belt webbing. The belt will then slide easily through the buckle. To release the lap belt, depress the push-button located in the center of the buckle.

Automatic-locking lap belt retractors are provided for the added convenience of the driver and outboard front seat passenger on all Cadillac cars except the limousine style, which has the conventional spool-type retractors. The automatic-locking retractors adjust and lock the lap belts into position automatically to provide a snug and comfortable fit.

To fasten a lap belt equipped with an automatic-locking retractor, pull the belt across the lap far enough to permit inserting the flat metal "eye"

end into the buckle. If the belt is not initially pulled out far enough to permit buckling, release the belt thus allowing it to rewind in the retractor and release the locking mechanism, so the belt

can be pulled out to the proper length. Once the buckle is fastened, pull the belt firmly across the lap in the direction of the retractor to obtain a snug fit. The retractor will automatically take up the excess webbing.

NOTE: A recess is provided in the center of the front seat cushion on some styles for storing lap belts and inboard shoulder belts when not in use.

CAUTION: The buckle and flat metal "eye" of the lap belt used with automatic-locking retractors are smaller than those used with other systems. Care should be taken to avoid inserting the small metal "eye" in the larger buckle of either the shoulder belt or the center lap belt, because it will not latch properly.

CAUTION: Never use the same belt for more than one person at a time. Be sure to avoid: (a) wearing a lap belt loosely or with slack in the system; (b) wearing the belt with the webbing not fully extracted from a non-locking retractor; and (c) wearing the belt in a twisted condition or pinched between the seat structural (metallic) members.

27

Shoulder belts—All 1970 Cadillac cars except the Convertible Coupe are equipped with shoulder belts for the driver and right front seat passenger. Shoulder belts are optional for all other forward-facing outboard passengers including all outboard occupants in Convertibles.

When properly worn with a lap belt, a shoulder belt can provide additional protection against impact with the car interior by restraining forward motion of the upper torso in a collision. This is primarily true in case of frontal impacts, which are the most frequent type of accident.

CAUTION: Wearing a shoulder belt without a lap belt can be extremely hazardous to the wearer in case of an accident. In addition,

the use of a shoulder belt is not recommended for a person less than 4 feet 7 inches in height because the belt would cross over the body too near the neck and thereby substantially increase the danger of neck injury in a collision. Also, to avoid improper force distribution, the shoulder belt should not be worn under the arm.

Shoulder belts are fastened and released in the same manner as lap belts. A shoulder belt should not be uncomfortably tight. A fist's width between your chest and the belt should provide sufficient slack. This can be checked by inserting a clenched fist between the belt and your chest with thumb against chest and back of hand facing upward.

CAUTION: The driver's shoulder belt should be adjusted so the driver can reach essential operating controls without undue restraint.

When not in use, shoulder belts should be secured in the special storage convenience provision. This is to reduce the danger of the metal end striking an occupant in a sudden stop. Storage provisions are not provided for optional rear shoulder belts. In such case, the loose end

mounted on the upper structure should be fastened to the floor-mounted end, and adjusted to remove excess slack.

Passengers in the rear seat of a convertible must remove their shoulder belts (optional equipment) BEFORE the top is lowered. The shoulder belt will require adjustment after the top has been either lowered or raised.

Child restraint—Children in automobiles should be restrained to lessen the risk of injury in accidents, sudden stops or other driving conditions. General Motors has designed an "INFANT SAFETY CARRIER" specifically for infants and a "CHILD SAFETY SEAT" specifically for small children, which are available from your Cadillac dealer. The Carrier and Child Seat are designed to utilize lap belts in your 1970 Cadillac.

The General Motors Infant Safety Carrier and the Child Safety Seat must be used only in passenger vehicles equipped with lap belts. They may be used on seats which do not fold or folding seats equipped with a latch to hold the seat-back upright (Standard on 1967 and later model GM passenger vehicles). Otherwise the Carrier or Child Seat should be used on the rear seat of the passenger vehicle. In using either Carrier or Child

28

Seat, read and comply with all installation and usage instructions shown on the label attached to the device; do not use them in any manner not in accord with the label. Do not place more than one child at a time in the Carrier or Child Seat. All unused seat belts near the Carrier or Child Seat should be stowed properly to prevent their striking the child in the event of a sudden stop or collision. Shoulder belts should be stowed in any special storage convenience provision provided; lap belts and shoulder belts without storage provisions should have buckles latched and belts adjusted to remove slack.

CAUTION: Neither the Carrier nor Child Seat are recommended for use with folding or hinged seat-backs not having self-locking devices. The Carrier is designed for use only with infants weighing up to 20 pounds. The Child Seat is designed for use only by children who are able to sit up by themselves weighing up to 30 pounds.

CARS NOT EQUIPPED WITH SPECIAL CHILD RESTRAINTS

If a child is traveling in a vehicle not equipped with a General Motors Infant Safety Carrier or

Child Safety Seat, the following precautions should be taken:

1. Children should be placed in the rear seat. Never allow a child to stand or kneel on any seat.
2. Infants unable to sit up by themselves should be restrained by placing them in a covered, padded bassinet which is placed crossways in the vehicle (widthwise) on the rear seat. The bassinet should be securely restrained with the regular vehicle seat belts. An alternate method is to position the bassinet so that it rests against the back of the front seat, again crossways in the vehicle.
3. When a child is old enough to sit up by himself in a car, he should sit on a firm cushion and use the conventional lap belt to restrain him at the hips. The cushion should be as firm as practical and enable the child to look horizontally out of the car windows.
4. The use of the cushion should be discontinued as soon as the child is old enough to see out of the car windows without it.

5. Do not use shoulder belts on children shorter than approximately 4 feet 7 inches in height.
6. General Motors recommends that children be restrained when riding. However, if conditions require that a child must stand, he should stand on the floor directly behind the front seat. This will minimize the possibility of his being thrown from the rear compartment during a sudden stop. This method should be used only if more complete restraint cannot be used.

Seat belt inspection and care—Keep the belts clean and dry. Clean with a mild soap solution and lukewarm water. Keep sharp edges and damaging objects away from belts. Periodically inspect belts, buckles, retractors, and anchors for damage that could lessen the effectiveness of the restraint system, and have questionable parts replaced. Seat belts should be replaced if cut, weakened, frayed, or subjected to collision loads. During seat belt inspection, check that anchor mounting bolts are tight to the floor. Do not bleach or dye belts since this may cause severe loss of strength.

PRE-COLLISION POSITIONING

If in addition to wearing seat belts, a person can "pre-position" his body to get ready for a frontal impact, the severity of his impact with the vehicle interior can be reduced by a considerable amount. If a severe accident threatens, the "pre-positioning" technique calls for reducing the space between one's body and the vehicle interior as much as possible. Practice beforehand in assuming the proper position may make its employment automatic in an accident situation.

A driver wearing both lap and shoulder belt should lean forward into the restraint system, grip the upper rim of the steering wheel with both hands, and rest the arms on the steering wheel rim with elbows out. Control of the vehicle can be maintained until the last possible moment; then bend the head forward. If the shoulder belt is not worn, the driver should at the last moment rest his forehead on the backs of his hands.

A front seat passenger wearing both shoulder and lap belt should lean into the shoulder belt, place hands and forearms on top of the instrument panel with elbows out to the side and the head bent far forward. Front seat passengers wearing lap belts only should lean as far forward as

possible, place their forearms on top of the instrument panel, and cradle their head on their arms. Lap-belted rear seat occupants should lean far forward, and rest head on arms on the top of the front seat-back rest. Children or short adults in front or back seats who cannot contact instrument panel or seat-back with their head when swinging forward should lean far forward with head down, and wrap their arms beneath and around their upper legs.

While these positions cannot protect the occupants against all types of injury in all types of accidents, they can be expected to reduce injury severity in the majority of cases.

HEAD RESTRAINTS

The head restraints on 1970 Cadillac cars are not adjustable. Cadillac does not recommend operating the vehicle with the head restraint removed. However, should it be necessary for a very short driver to remove the head restraint to improve his rearward vision, move the lever adjacent to the plate at the base of the support rod to the left, at the same time the restraint is pulled upward. If the head restraint is removed for a short driver, it must be re-installed for a taller driver. The head

restraint is also designed to protect rear seat passengers by shielding the head restraint latch and bracket on the front seat back rest, which may be in the head impact area of some adult rear seat occupants.

Check the head restraints periodically; if any components are missing or if the restraints do not appear to be functioning properly, they should be inspected by your Cadillac dealer and any necessary corrections made.

REAR VIEW MIRRORS

Inside and outside rear view mirrors have been carefully designed and located to give the driver a clear and reasonably unobstructed view to the

rear of the car. Rear view mirrors are not intended for use while backing up or for surveillance of conditions close to the rear of the car. It is suggested that the driver turn his head and look to the rear during backing operations.

The inside day-night rear view mirror incorporates a triple-jointed mounting so the driver can position the mirror vertically and horizontally to suit his driving needs. It is only necessary to exert enough pressure to overcome the friction load at the three joints in order to adjust the mirror to any position within the physical limits of its travel. Cross-car adjustment of the mounting is provided. However, positioning the mirror too

far to the right may cause interference with the right hand sun visor.

The inside day-night rear view mirror may be positioned from clear daylight visibility to non-glare visibility at night by rotating the lever on the bottom of the mirror. For daylight driving, move the lever to the left; for night driving, to the right. The mirror can be adjusted to accommodate the driver's height and seat position by moving it on the ball stud or pivot arm in back of the mirror.

Remote-control outside rear view mirror—Your Cadillac is equipped with a remote-control outside rear view mirror on the driver's side of the car. Movement of the control knob inside the car, on the left front door armrest, allows you to adjust the mirror to suit your requirements. Repositioning the mirror in its support permits adjustments so that the view into the mirror is not obstructed.

An outside rear view mirror for right side of car, without the remote control feature, is installed on the Fleetwood Seventy-Five sedan and limousine and is available as a dealer-installed option on all other styles.

When cleaning the outside rear view mirror, use a soft cloth and a mild detergent or ammoniated cleaning solution. For removal of ice, use a de-icer (spray type, blower type, etc.). Scraping of ice from the mirror face could cause permanent damage.

GOOD DRIVING PRACTICE: A good driver always scans the area to the rear BEFORE entering the vehicle and backing up, and makes a habit of using his rear view mirrors while driving, so as to be aware of the rearward aspect of his total driving environment.

CONVERTIBLE TOP

CAUTION: Prior to raising or lowering the top, the car must be at a complete stop and the sun visors turned down. Also, when lowering the top, make certain that the top is thoroughly dry and that there are no items stored in or beneath the top well.

When the top is to be lowered, the locking handles located at the front of the side rails near the windshield header must be rotated inboard until the lock hook lever is disengaged from the striker

on the windshield header. (The locking handles must remain in this position until the top is to be again locked to the windshield header.) The top control switch is then actuated until the top is in the fully lowered position.

To raise the top, actuate the control switch until top rests on the windshield header and the guide pins on the outboard corners of the top engage the striker assemblies on the windshield header. Rotate the left locking handle, and then the right locking handle, outboard to engage the lock hooks with the striker assemblies. **BE CERTAIN TOP IS SECURELY LOCKED TO THE WINDSHIELD HEADER PRIOR TO MOVING CAR.**

Installing the top boot—Remove the boot, which is normally stored in a plastic bag in the rear compartment.

Place the boot over the lowered top and engage the snap fasteners on the boot onto the studs on the quarter trim. The rear and sides of the boot are secured by pulling the boot away from the belt molding, starting at the center, and sliding the plastic retainer under the belt molding. The front portion of the boot is secured by engaging the snap fasteners on the boot onto the studs on the rear

seat-back and pressing down the entire front portion of the boot.

Care of convertible top and rear window—The convertible top should never be subjected to volatile cleaners or household bleaches. Frequent washing with neutral soap suds, lukewarm water and a soft bristle brush is normally all that is necessary to maintain the "like new" look. In the event heavy soilage or stubborn stains are encountered, a mild foaming cleanser, lukewarm water and a soft bristle brush may be used. If desired, the top may be supported from the underside during the cleaning operation. Regardless of which cleaning method is used, a generous amount of rinse water is to be used, as any soap that may have run down on the body finish may cause streaks if allowed to dry.

After cleaning the top, be certain the top is thoroughly dry before it is lowered.

The rear window in the back curtain may be cleaned in the same manner as all body glass. Volatile cleaning agents should be avoided as these liquids could have a deteriorating effect if spilled on the back curtain material or any painted finish.

SECTION 2

SPECIAL FEATURES

GENERAL

There are some special features that are installed on your Cadillac and others that are optional. These features are designed for your comfort and convenience and to add further to the enjoyment of your 1970 Cadillac.

Operating instructions for these special features are given in this section. Review them carefully, as a complete understanding of their operation will help you derive the utmost satisfaction from their use.

AUTOMATIC CLIMATE CONTROL HEATING AND AIR CONDITIONING

Automatic Climate Control is standard on the Fleetwood Seventy-Five sedan and limousine and is available as an optional accessory on all other models. This system controls heating and air conditioning automatically to maintain comfort in the passenger compartment. The system turns on automatically, controls the volume and temperature of the air delivered into the car and determines whether the air will be discharged from instrument panel outlets or heater outlets.

In warm weather the system will turn on almost immediately and deliver cool, dehumidified air

from three adjustable dual outlets, one at each end and one in the center of the instrument panel. The vanes in these outlets can be adjusted to direct air flow as required by moving the knob on each outlet in the direction you wish the air to flow. If it is desired to drastically reduce airflow from the center or right outlet, to eliminate drafts, for example, push the knob to the extreme left hand position. To accomplish this on the left outlet push the knob to its extreme upward location. The up and down louver travel on the outboard portion of the right outlet is restricted to make it more convenient to use the ash tray in the right hand door armrest.

In cool weather, heated, dehumidified air may be delivered from the outlets in the instrument panel. This air can be as warm as 85°F. If warmer air than this is required to maintain the car interior at the temperature selected, the control system will automatically cause the air to be delivered from the heater outlets at floor level.

In cold weather the system will delay operation until engine coolant has become warm and will then deliver heated air from a distributor located just below the instrument panel at the centerline of car. Most of this air is directed to the floor; a

33

certain fixed portion, however, is continuously directed at the windshield to prevent fog formation.

NOTE: On all cars except the Eldorado the blower automatically purges residual air from the system before discharging it into the passenger compartment. This pre-conditions the air prior to its introduction into the car. This purging action takes place at a low blower speed any time the ignition is on, even when the Climate Control is turned off.

Individually-controlled front and rear Automatic Climate Control Systems are provided on the Fleetwood Seventy-Five sedan and limousine. Operating instructions for the front system, as explained in this section, also apply to these models; operating instructions for the rear system can be found in Section 4, beginning on page 51.

Controls

The control panel for Automatic Climate Control is located on the instrument panel just to the left of the steering column. It is illuminated when instrument panel lights are on.

Normal Operation

1. Set the temperature dial on the control panel to the interior temperature desired.
2. Position the sliding lever at "AUTO." This turns the system on, providing 100% outside air at all times and automatically controls heating, air conditioning and blower speeds.

After initial settings are made, it is recommended that the system be left on at all times for maximum comfort. If a slightly warmer or cooler temperature is desired move the temperature dial only two or three degrees at a time for best results.

Additional settings—Five additional settings are provided to give you control over the system to meet unusual situations.

The "LO" setting causes the system to operate the same as it does at the "AUTO" setting except at a fixed low blower speed. The temperature is

still controlled automatically as in the "AUTO" setting, within limits of system capability.

The "HI" setting causes the system to operate as in the "AUTO" setting but at maximum blower speed, resulting in quicker cool-down in summer and warm-up in winter. Also, it allows the air conditioner to operate on 80% recirculated air for maximum cooling efficiency.

To achieve early comfort when the car has been parked in the hot sun, the outlets may be adjusted to direct the air on the driver and passenger and later readjusted for best overall comfort. The windows should be lowered for a few minutes to aid in exhausting the hot air.

The "FOG" position causes most of the air to be directed to the windshield to remove fog. The system will operate as it does at "AUTO" except for air delivery.

The "ICE" position provides fixed MAXIMUM blower speed and air delivery to the windshield.

In the "FOG" and "ICE" positions, the system will go on as soon as the engine is started, regardless of engine coolant temperature; any air flow across the inside of the windshield is helpful in removing fog or ice.

34

- In the "VENT" position outside air is discharged into the passenger compartment through the three dual air conditioning outlets. The blower automatically operates at a fixed low speed to provide positive air circulation. The compressor does not operate in this setting. There is no control of temperature.

REAR WINDOW DE-FOGGER

A blower type Rear Window De-Fogger is available as an optional accessory on all 1970 Cadillac cars. In operation, the De-Fogger distributes fan-blown air across the rear window to help clear fog or steam for better visibility in humid weather.

The De-Fogger is controlled by a switch, labeled "Rear DeFog," located on the left side of the instrument cluster just above the headlight switch. Two fan speeds are provided. For "HIGH" fan speed, move the switch from "OFF" to the extreme right position. For "LOW" speed, move it to the center position.

A rear window de-fogging feature is integral with the rear heating system on the Fleetwood Seventy-Five sedan and limousine. Operation of the rear window de-fogger system used on these cars is explained in Section 4, on Page 52.

TILT AND TELESCOPE STEERING WHEEL

The Tilt and Telescope Steering Wheel (available as an optional accessory) permits two separate adjustments of the steering wheel position for greater comfort, convenience and driving ease. The steering wheel can be tilted to any one of six different positions, and can be moved closer to or farther from the driver over a three-inch range of adjustment. This permits individual selection of the most natural and comfortable position for all driving conditions. Also, on long trips, the steering wheel position can be changed to minimize tension and fatigue. The adjustments are simple, and independent of each other.

The tilt adjustment is achieved by lifting upward on the small lever located on the left side of the steering column below the turn signal lever. The steering wheel can then be tilted to the desired angle and locked in place by releasing the lever.

Moving the locking lever located on top of the steering column above the steering wheel cover to the left, permits telescoping; moving the lever to the right locks the wheel. Both the tilt and

telescope mechanisms can be changed while driving, but changes should not be attempted in heavy traffic.

These features also permit maximum ease in entering and leaving the car. The wheel is spring-loaded, so that lifting upward on the small lever automatically raises the wheel to a higher position. Additional clearance can be obtained by unlocking the steering wheel and moving it all the way in.

The Tilt and Telescope Steering Wheel can be adjusted in conjunction with the seat to provide maximum driving comfort.

CRUISE CONTROL

Cadillac Cruise Control is available as an optional accessory on all 1970 Cadillac cars. Cruise Control is a driver-operated speed regulating device that automatically controls car speed as low as 30 miles per hour. The system is operated by a two-position control switch located on the top left side of the instrument cluster and a lock-in button on the end of the turn signal lever.

For Automatic Speed Control, with ignition on, move control switch to "ON" position. A red light, labeled "ON", will glow on the right side of the control switch, indicating the system is set for

Automatic Speed Control. Accelerate to desired cruising speed and momentarily depress the lock-in button on the end of the turn signal lever. A green light, labeled "Cruise", will glow above the control switch, indicating the Cruise Control is locked-in. Cruise Control will now maintain car speed without foot pressure on the accelerator pedal.

CAUTION: With the Cruise Control engaged, releasing the accelerator pedal does not permit engine speed to return to idle. Do not use Cruise Control when driving conditions do not permit maintaining a constant speed, such as in heavy traffic, or on winding or slippery roads.

When the system is in automatic control, car speed can be increased for passing by depressing the accelerator pedal. The car will return to set speed when the pedal is released. Also, cruising speed can be increased by accelerating to the desired new speed and momentarily depressing the lock-in button.

Cruising speed can be decreased by depressing the lock-in button and holding it in while car speed decreases. When the desired lower speed

is reached, release the button and the system will lock in at the new speed.

Automatic speed control is disengaged when the brake pedal is depressed. To re-engage, accelerate to desired cruising speed and momentarily depress the lock-in button. The system will again engage. It is not necessary to move the control switch to "ON" to re-engage control when the red light is on.

Moving the control switch to the "OFF" position completely disengages and locks the system so that it cannot be locked in when the lock-in button is depressed. Also, the system is disengaged whenever the ignition is turned off.

GUIDE-MATIC POWER HEADLIGHT CONTROL

The Guide-Matic Power Headlight Control (available as an optional accessory) automatically switches the car's headlights from high to low beam when another vehicle approaches from the opposite direction, and returns them to high beam again when conditions permit. When driving behind another car at night the headlights may switch from high to low beam, as Power Headlight Control is sensitive to the red reflection, depend-

ing upon the brightness of the tail lights on the car ahead. However, it may occasionally be necessary to switch the headlights to low beam with the foot dimmer switch to prevent annoying the driver of the car ahead. Automatic operation of the headlights is regained by an additional actuation of the foot switch.

The foot switch is a special dimmer-override type that provides either automatic or lower beam control of the headlights. It also contains an override feature for obtaining an overriding high beam when in automatic position, if desired.

A slight downward pressure on top of the switch provides high beam, regardless of the amount of outside light. This arrangement permits signaling

an approaching driver if he fails to switch to low beam, and also provides a simple check for the automatic position of the foot switch.

A sensitivity control ring located directly behind the headlight control knob permits adjusting the sensitivity of the Power Headlight Control. This ring is identified by the words "AUTO DIMMING" above the ring. Centering the control ring pointer between "OFF" and "FAR" provides normal sensitivity.

Rotating the control ring clockwise toward the word "FAR" causes the lights to dim sooner. To obtain maximum dimming distance for the existing road conditions, rotate control ring to "FAR," allow lights to be dimmed by oncoming cars and rotate control ring slowly counterclockwise until headlights return to upper beam. This is the most sensitive (farthest) usable setting.

Rotating the control ring counterclockwise delays the dimming action. Minimum dimming distance is achieved by rotating the control counterclockwise against the detent next to the "OFF" position.

For conventional operation of headlight dimming, rotate the sensitivity control ring counterclockwise past the detent to the "OFF" position.

37

TWILIGHT SENTINEL

Cadillac Twilight Sentinel (available as an optional accessory) automatically turns on the car's driving lights as darkness approaches, when the ignition switch is "ON". The unit also turns the lights off as daylight approaches. The unit has a short time delay to prevent car headlights from turning on or off intermittently when driving under viaducts, trees, bright lights, etc.

The Twilight Sentinel control lever is located behind the headlight control knob (on cars equipped with Guide-Matic Power Headlight Control, the control lever is located behind the sensitivity control ring).

For automatic operation, move the control lever counterclockwise past the "OFF" detent position. Leave the headlight control knob all the way in. The car's lights will automatically turn "ON" as darkness approaches and "OFF" as daylight approaches. If the driver desires to turn the car's headlights on during daylight hours, which may be necessary to identify the car in such conditions as fog, rain or when driving through a tunnel, he may do so by pulling out the headlight control knob. To regain Twilight Sentinel control of lights, push the headlight control knob back in.

NOTE: Always check position of headlight control knob after leaving car with a parking attendant or other drivers who are unfamiliar with your car.

An adjustable time delay feature permits the lights to remain "ON" after the ignition switch is turned "OFF" to provide a path of light for driver and passengers as they leave the car. Additional side lighting can be obtained by activating a cornering light with the turn signal lever. For TIME DELAY ACTION, move the control lever between "OFF" and "MAX" to the position that provides the desired time delay. Maximum time delay is approximately 90 seconds. Minimum time

delay may be obtained by rotating the control lever clockwise against the detent next to the "OFF" position.

For manual operation of the headlights, move the control lever clockwise through the detent to the "OFF" position. This permits conventional operation of lights with the headlight control knob.

RADIOS

The Cadillac AM-FM push button, AM-FM signal seeking and AM-FM signal seeking Stereo radios (each available as an optional accessory) are fully transistorized. The AM-FM Stereo radio is available on all models except the Fleetwood Seventy-Five sedan and limousine.

The radio is located on the instrument panel to the right of the steering column. Control knobs are located on either side of the radio dial and five push buttons are provided below the dial. A selector bar is provided above the dial on signal seeking radios only.

The radio antenna is an integral part of the windshield. The antenna consists of two wires imbedded in the laminate between the windshield glass. The wires run up the center of the windshield to the top, then branch out in opposite

directions across the top. The wires are slightly visible but do not obstruct vision.

Controls—The left control knob is the "ON," "OFF" and "VOLUME" control. The ring behind the left knob controls the tone. Turned to the left, bass tones predominate—turned to the right, treble tones are accentuated. Balanced tones can be obtained by centralizing the ring in its detent position.

Manual tuning is accomplished by turning the right control knob to set the pointer at the desired frequency on the dial. The ring behind the right knob controls the operation of the front and rear speakers. Counterclockwise rotation accentuates the rear speaker. Clockwise movement accentuates the front speaker.

Push buttons—The AM and FM push buttons are used to select the desired frequency band. Pushing

the AM button selects the AM band as well as the pre-set AM station. Pushing the FM button selects the FM band and the pre-set FM station. To simplify tuning, only the dial for the frequency band selected is visible. The letters "AM" or "FM" light on the left side of the dial to identify the frequency band selected.

The five push buttons can be pre-set to favorite stations. However, the AM push button can be set only on an AM station and the FM push button on an FM station. The three center push buttons may be set on either AM or FM stations.

To set the radio push buttons, depress the AM push button first, then tune in the desired AM station nearest the left end of the dial with the manual tuner knob. Fine tune until best reception is obtained. Pull the AM button straight out, then push the button all the way in. The AM push

button will now select that station repeatedly. Select the desired frequency band and continue this process for setting the three center push buttons on other AM or FM stations and the FM push button on an FM station.

Selector bar—The selector bar on AM-FM signal seeking radios permits automatic search tuning. Stations can be changed by momentarily depressing the selector bar located above the radio dial. The tuner will then stop at the next station on the dial. This action takes place each time the selector bar is depressed.

A three-position sensitivity control switch for automatic tuning is located in the center below the bar. On the AM/FM radio, on both AM and FM bands, moving the switch to the left allows the tuner to stop only on more powerful stations. In the middle position, stations of slightly lower power will be received in addition to stronger stations. To obtain maximum sensitivity, and bring in weaker stations, move switch to the right.

On the AM/FM stereo radio, the left and center switch positions allow the tuner to stop only on more powerful stations and all usable stations respectively, on both AM and FM bands. When the

switch is in the right hand position and the FM band is being used, the tuner will stop only on FM stereo stations and on most local AM stations when the AM band is being used.

A radio foot control switch that performs the same station selecting function as the selector bar is available as a dealer-installed accessory for both signal seeking radios. Depressing the switch located on the floor to the left of the brake pedal changes the stations automatically so that the driver need not remove his hand from the steering wheel or take his eyes off the road.

FM reception—The FM receiver is normally free from most atmospheric and man-made static. The effective range of FM transmitters, however, is usually limited to no more than line-of-sight from the transmitter—or about 20 miles. Moving out of this effective range will produce a "flutter" or a series of noise bursts in the signal. Ignition interference from adjacent vehicles may also be encountered.

Retuning may be necessary when reception becomes slightly noisy while driving through weak signal areas such as the center of a large city. The interference can be quieted by tuning the tone control for more bass, and by shifting the speaker

volume to favor the rear seat. When it is not possible to eliminate these effects by retuning, try tuning to a stronger FM station or to the AM band.

AM-FM Stereo radio—The Cadillac AM-FM signal seeking Stereo radio provides a selection of AM-FM monaural or FM stereo reception. The Stereo radio is pre-set at the factory for balance and correct separation of sound and requires no manual adjustment.

Four separate speakers, two in the front and two in the rear, are used in conjunction with the AM-FM Stereo radio to provide rich stereo sound for front and rear seat passengers. The front speakers are located at each end of the instrument panel top cover and the rear speakers are in the left and right corners of the rear seat filler panel. Rear speakers on convertible styles are located behind the back seat on the lower left and right

side. Care should be taken not to place objects over the front or rear speakers as this would block the sound.

Stereophonic reception is possible only when there is stereophonic transmission. The letters "STEREO" will light on the right side of the dial when the radio is tuned to an FM stereo station. This does not always mean that you are receiving stereo, as the station may not be transmitting stereo at that particular time. Familiarizing yourself with the frequencies of your local FM stereo stations will assist you in station selection.

Stereo tape player—A Stereo Tape Player is available as a dealer installed accessory for all Cadillac radios.

This accessory provides the finest in tape

recorded stereo music to add to your driving pleasure.

The tape unit uses a standard eight-track stereo tape cartridge containing four entertainment programs. A complimentary tape is provided to demonstrate the capabilities of the tape player. Other cartridges are available from local music stores or music supply houses.

Familiarizing yourself with the following operation and control features will assure maximum enjoyment of your Stereo Tape Player.

Four controls are located on the left side of the Stereo Tape Player: (1) Tape Program Selector (2) Balance (3) Volume and (4) Tone. Four program selections are available on each tape cartridge. They may be selected in sequence by depressing the program selector (1) on the player. The Volume Control (3) adjusts the over-all volume of the system. The Tone Control (4) accentuates bass tones when turned counterclockwise and treble tones when turned clockwise. A setting near the mid-point of rotation provides optimum tonal range for music. Relative front-rear volume levels are adjusted by setting the Balance Control (2).

The Stereo Tape Player is turned on by inserting

a cartridge through the tape door with label side up and open end forward. The tape will play through all four programs in succession. To change programs, push in the program selector and release it. Each time the selector is pushed and released the player will index to the next program. The unit will play and replay the four programs in sequence until the cartridge is removed.

Insertion of the tape cartridge shuts off the radio, turns on the tape player and switches the speakers to the tape player system. The radio does not have to be turned on to operate the tape system; all tape player controls are contained within the unit. A pilot light on the player indicates when the player is in operation.

Tape cartridges should always be removed from the player when not being played and stored where they are not exposed to heat or direct sunlight. Also, longer tape life and better performance can be expected from the Tape unit if the cartridge is removed from the player prior to turning off the ignition switch.

ELECTRICALLY OPERATED FRONT SEATS

The controls for electrically operated front seats (optional on some models) are mounted on the

side of the seat cushion panel driver.

On cars equipped with a seat, a two-way electrical control for fore and aft movement of the two-way manual control is passenger's seat. Electrically seat adjusters are optional passenger's seat. Individual controls on the lower outboard side of panels.

For forward and backward adjustment of the two-way electrically operated seat, move the switch lever in the direction of the desired seat movement.

Adjust the six-way electrically operated seat as follows: Move the center switch lever forward or backward to control the horizontal fore and aft movement of the seat. Move the center switch lever up or down to control the vertical movement of the entire seat. Move the front switch lever up or down to raise or lower the front of the seat and to tilt the seat-back accordingly. Move the rear switch lever in the same manner to adjust the rear of the seat.

Bucket seat controls—On Eldorados equipped with bucket seats, two-way electrical controls are provided for fore and aft movement of each seat. The controls are located on the lower outboard side of the seat cushion panels. Four-way movement of the driver's seat only, is optional.

POWER DOOR LOCKS

If your car is equipped with power door locks (available as an optional accessory), all doors may be locked or unlocked by operating the switch marked "LOCK," located on either front door armrest. Moving the switch away from you locks

all doors, and toward you unlocks the doors. The automatic locking mechanism does not, at any time, interfere with manual operation of any door lock button. The doors will not unlock or open with the inside door handle when the lock button is depressed, but can be unlocked individually by lifting the lock button.

On coupe styles equipped with power door locks, both front seat-backs unlock automatically when either front door is opened, and lock when both doors are closed.

REMOTE-CONTROL TRUNK LOCK

Cadillac's Remote-Control Trunk Lock (available on some models) permits the driver to unlock and raise the trunk lid by pushing a button located in the glove box. A red warning light on the left side

of the instrument cluster, labeled "Trunk", will glow when the trunk lid is unlocked with the ignition "ON". When the trunk lid is lowered, a latching mechanism pulls the lid firmly closed and locks it. The trunk lid can also be opened in the normal manner with a key from outside the car. To prevent damage to the closing mechanism, avoid slamming the lid when closing. Once unlocked, the lid must be fully raised before the pull-down and locking can be accomplished.

An automatic trunk lid release without the pull-down feature and red warning light, is available as a dealer installed accessory.

To help prevent illegal entry into the trunk, keep the glove box locked when leaving the car unattended.

AUTOMATIC LEVEL CONTROL

Automatic Level Control is installed on Fleetwood styles and is available as an optional accessory on all other models.

Automatic Level Control maintains the rear height of the car. The leveling system will compensate for loads up to 500 pounds in the rear passenger compartment or luggage compartment. A level car improves appearance as well as ride, provides better headlight aim, and reduces "bottoming" on severe bumps or bumper scraping on ramps or driveways.

CONTROLLED DIFFERENTIAL

The optional Controlled Differential (available on all models except the Eldorado) provides additional traction on snow, ice, mud, sand and gravel, particularly when one drive wheel is on a surface providing poor traction.

During normal driving and cornering, the Controlled unit functions as a standard differential. When one wheel encounters a slippery surface, however, the Controlled Differential directs driving force to the wheel having the better traction.

CAUTION: On cars equipped with a Controlled Differential, never run the engine with one drive wheel off the ground, since the car may drive through the wheel remaining on the ground.

CAUTION: Care should be taken to avoid sudden acceleration when both drive wheels of any vehicle are on a slippery surface. This could cause both drive wheels to spin, especially when car is equipped with a Controlled Differential, and allow the vehicle to slide sideways on the curved surface of a road or in a turn.

43

SECTION 3

FLEETWOOD ELDORADO

GENERAL

The brilliant Cadillac Fleetwood Eldorado, with its 400 horsepower engine, combines the spirit and action of a high-performance car with the comfort and spaciousness of a luxury car. The level, unobstructed floor permits unrestricted leg room for all passengers; a unique ventilation system provides a draft-free flow of air throughout the car; and the quietness and smoothness assure a wonderful measure of Cadillac motoring pleasure.

So that you will become thoroughly acquainted with the many exclusive features of the Cadillac Eldorado, we suggest that you review the following pages of explanation and instruction thoroughly. Complete familiarity with the proper operating procedures will help you to realize the utmost in motoring pleasure and will greatly enhance your enjoyment of this fine motor car.

INSTRUMENTS

The instructions on the use of the various instruments and accessories, as explained in Sections 1 and 2, also apply to the Fleetwood Eldorado.

Side marker lights and reflexes—Your Cadillac Eldorado is equipped with front and rear side marker lights and reflexes that provide additional

side identification so the car is more visible to other motorists at night. Whenever the headlights or parking lights are on, the front and rear side marker lights also are on. They are activated by pulling out the headlight control knob and are lighted in both positions of the control knob.

The front side marker lights and reflexes are combined with the cornering lights on the front fenders. When the lights are on, the front side marker lights glow amber. This does not affect

normal operation of the cornering lights that emit a white beam when activated. Rear side marker lights and reflexes are located on the rear quarter lower panel on each side of car, and light up red. Also, rear reflexes only, are provided in the rear bumper on either side of the license plate.

VENTILATION AND HEATING

Passenger compartment ventilation—Positive air flow is provided by an automatic exhausting system that allows air to discharge from the rear passenger compartment through ventilator grilles in the door lock pillars.

Ventilation—On cars not equipped with air conditioning, outside air is drawn into the passenger

compartment through the opening located in the cowl directly below, and in front of, the windshield. This location reduces intake of exhaust fumes from other cars.

Outside air is discharged into the passenger compartment through ventilation outlets on the instrument panel and cowl trim-pads. The vanes in the left outlet on the instrument panel can be set to direct air flow to the right or left while the right outlet will direct air flow up or down. The up and down louver travel on the outboard portion of the right outlet is restricted to make it more convenient to use the ash tray in the right hand door armrest.

The ventilation control for the instrument panel

outlets is integral with the heater control panel located on the instrument panel to the left of the steering column. Move the lower lever to the right, under the first white mark, and place the upper right lever in the "Vent" position to admit outside air through the instrument panel outlets. The fan automatically operates to provide air circulation. The fan switch controls the volume of air discharged into the passenger compartment and can be set at any one of three speeds.

The ventilation outlets in the cowl trim-pads are individually controlled by a knob at each end of the instrument panel. Pulling out the knobs opens air doors and admits ventilating air into the passenger compartment. The knobs can be pulled

45

out partially or all the way to admit as much air as desired.

HEATING

The heating system delivers heated air through a unit located on the right side of the cowl. The heated air is discharged into the front passenger compartment through grilles and openings in the front floor area below the center of the instrument panel. Part of the heated air may be directed to the windshield for removing fog or ice.

Heater control operation—On Eldorados not equipped with air conditioning, heater controls are located on the instrument panel to the left of the steering column. The controls consist of a switch to control fan speed, a switch to control ventilation and the heater and defroster and a switch to turn the heater on and off and control the temperature. The controls are illuminated when the instrument panel lights are on.

The lower lever turns the heater on and off and controls the temperature. The fan switch controls the fan speed and can be set at any one of three speeds. The upper right lever controls ventilation and the heater and defroster. Moving this lever to "HEAT" directs air into the passenger compart-

ment. To increase the temperature, move the lower lever to the right; to decrease the temperature, move it to the left. If air is desired on the windshield, move the upper right lever to the "DEFROST" position. For removing ice, move all levers to the extreme right position.

Heater control during warm-up—For maximum heat and quickest warm-up in cold weather, place the upper right lever at "HEAT", move the lower lever all the way to the right, and set the fan switch on "HIGH." If it is necessary to remove some fog from inside the windshield during this period, move upper right lever to the "DEFROST" position to direct air to the windshield.

Windshield defrosting and defogging—The windshield defrosting and defogging system assists in providing good visibility through designated

areas of the windshield under most inclement weather conditions.

CAUTION: In inclement weather, clear snow or ice from cowl air inlets. This will improve heater and defroster efficiency and reduce formation of fog or frost on the inside of the windshield during initial operation under certain atmospheric conditions. Also, clear the windshield, rear window, outside mirrors and all side windows of ice or snow prior to operation of the vehicle. This will improve driver's vision during initial operation.

CAUTION: On Eldorados equipped with air conditioning, operate the system in the "AUTO" position for 30 seconds before switching to "FOG" or "ICE". This will remove humid air from the system and minimize rapid fogging of the glass which can occur if humid air is blown onto a cool windshield.

Automatic climate control heating and air conditioning—Operating instructions for the Automatic Climate Control system on the Fleetwood Eldorado are the same as for all other cars as explained in Section 2, beginning on page 33.

46

FUEL TANK

The fuel tank, filler pipe and all tank connections have been carefully designed to reduce fuel leakage after termination of certain collisions. This design reduces fire hazards in these collisions.

Capacity of the Cadillac Eldorado fuel tank is approximately 24 gallons (20 Imperial gallons), except Eldorados shipped to the state of California which have a fuel tank capacity of approximately 22 gallons (18½ Imperial gallons). The last few gallons of gasoline must be added very slowly to completely fill fuel tank.

The gasoline filler cap is located behind the fuel filler door in the center of the trunk lid, just above the bumper. To gain access to the cap, lift up on fuel filler door.

CAUTION: Gasoline is flammable and explosive under certain conditions. Always stop the engine and do not smoke or allow open flames or sparks near the vehicle when refueling. If gasoline fumes are noticed while driving, the cause should be determined and corrected without delay.

HOISTS—SERVICE LIFTING EQUIPMENT

The preferred type of hoist for lifting the Cadillac Eldorado is one that engages the front suspension and rear axle, or all four wheels.

When using a hoist that engages the front suspension and rear axle, certain precautions must be observed to prevent damage to the rear axle, as the centerline of the rear axle is behind the centerline of the rear wheels. Also, a special adapter may be required on some type hoists.

If a frame engaging hoist is used, certain precautions must be observed. Make certain the centerline of the door is behind the centerline of the lift post for proper weight distribution.

If a drive-on type hoist is used, be sure the centerline relationship as stated above is also applied.

EMERGENCY WHEEL CHANGING INSTRUCTIONS

CAUTION: Stand clear of, and never get beneath the car when it is supported only by a jack; the jack is designed only for use when changing wheels. Always use safety stands to support the car if necessary to get underneath. Do not run the engine with one drive wheel off the ground since the car may drive through the wheel remaining on the ground.

Jack components are stored in a molded styrofoam tool package in the luggage compartment in front of the spare tire. The jack base and wedge block are stored on top of the tool package. The jack base, tool package and spare tire are held in place by a through-bolt and wing nut.

47

To change wheel, proceed as follows:

1. If at all possible, park car on level ground, off the highway.
2. Place shift selector in PARK position, shut off engine, set parking brake, and activate Hazard Warning Flasher.

3. Remove jack components and spare tire from luggage compartment; install rack bar in jack base and install jack handle in jack.

4. Front or rear bumper—Engage tab at bumper seam with hole in jack hook. Holding jack hook against bumper, position and raise jack assembly to engage pin on jack hook.

CAUTION: Before jacking up the car, block the wheel diagonally opposite from the jack position with the wedge block provided.

5. Reposition jack base so that rack bar is vertical, and raise jack until snug.
6. Use tip of jack handle to remove wheel disc.
7. Loosen wheel nuts ½ turn (counterclockwise).
8. Raise car on jack and remove wheel mounting nuts.

CAUTION: Before removing deflated tire and wheel assembly, make certain car is raised sufficiently to permit installation of fully inflated tire.

9. Install spare wheel and tire assembly, making certain wheel mounting nuts are tightened securely. Lower car, remove jack and recheck wheel nuts for tightness. Use rubber covered portion of jack handle to install wheel disc.

SECTION 4

FLEETWOOD SEVENTY-FIVE SEDAN AND LIMOUSINE

GENERAL

The Cadillac Fleetwood Seventy-Five represents the finest in formal motoring. Both the Sedan and Limousine styles embody many fine features not found in other models. The distinguishing characteristics of Cadillac's new styling are nowhere more clearly evident than in the Fleetwood Seventy-Five Sedan and Limousine. This most luxurious of all Cadillacs seats nine, including three persons on the full-width auxiliary seats in the rear. And the long 149.8 inch wheelbase and more than 20-foot over-all length provide exceptional spaciousness and riding comfort.

An extraordinary complement of powered conveniences accents the luxury of the Fleetwood Seventy-Five. Turbo Hydra-matic transmission, power brakes, power steering, power front seat adjustment, power windows, Automatic Climate Control and Automatic Level Control make the Seventy-Five the most completely equipped of all luxury motor cars.

Additional information given here covers the operating instructions for items exclusive to the Fleetwood Seventy-Five Sedan and Limousine. A complete understanding of these special features

will add further to the enjoyment of this majestic 1970 Cadillac.

KEYS

On the limousine style, a separate key is provided for the lock on the right hand rear door. The key is coded differently from the one used for the ignition lock and left front door, and the rectangular head is notched on two sides for easy identification.

INSTRUMENTS

The instructions on use of the various instruments and accessories, as explained in Sections 1 and 2, also apply to the Fleetwood Seventy-Five sedan and limousine.

COURTESY LIGHTS

Fleetwood Seventy-Five cars are equipped with courtesy lights that illuminate the interior of the car when any door is opened. When all doors are closed, full counterclockwise position of the headlight control knob turns on the courtesy lights under the instrument panel.

When any door is opened, the front door courtesy lights and red warning lights, the lights under the instrument panel, and the rear door courtesy lights and reading lights in the air condi-

tioning ceiling outlets operate. The only exceptions are the rear door courtesy lights and reading lights on the limousine style which do not operate when either front door is opened.

Manual switches for the reading lights in the rear compartment are located on the rear quarter trim panels above the armrests.

On the limousine style, the front compartment reading light, located in the headlining between the sun visors, is operated manually by the headlight control knob. Rotating the knob completely counterclockwise turns on the light, as well as the courtesy lights under the instrument panel.

POWER WINDOWS

All door windows are electrically operated on the Fleetwood Seventy-Five sedan and limousine.

The windows are wired through the ignition so

that they cannot be operated unless the ignition switch is in the "on" or "accessory" position. (Reminder: Remove the ignition key when leaving the vehicle unattended.)

Master controls for the electrically operated windows are located on the left front door armrest. The control switches are positioned to correspond with the windows they control; the left front switch for the left front door window, etc. There are also switches for the right front door window on the right front door. On the limousine style, master control switches for the rear door windows operate only to close the windows.

Controls for the rear door windows are located on the rear quarter trim panel above each armrest. Both rear door windows may be operated from either side of car.

Operation of the window lock-out switch as explained in Section 1, also applies to the Fleetwood Seventy-Five sedan and limousine.

On the limousine style, individual controls are mounted adjacent to the rear door window switches for operation of the partition window between the front and rear compartments.

POWER DOOR LOCKS

Operating instructions for power door locks (available as an optional accessory) as explained in Section 2, also apply to the Fleetwood Seventy-Five sedan.

On the limousine style, the door lock switch located on the left front door armrest operates only to lock the doors. An additional door lock switch is provided on the right rear door for the convenience of rear seat passengers. This switch locks and unlocks all doors.

ASH TRAYS AND LIGHTERS

Ash trays and lighters are provided on the instru-

ment panel and right front door armrest. Also, ash trays and lighters are provided on the rear door armrests for the convenience of rear seat passengers. Ash trays without lighters, are provided on the forward portion of the rear door armrests for use by auxiliary seat passengers.

AUTOMATIC CLIMATE CONTROL HEATING AND AIR CONDITIONING

The 1970 Cadillac Fleetwood Seventy-Five sedan and limousine are equipped with Automatic Climate Control. Automatic Climate Control automatically controls the heating and air conditioning system to provide comfort in the passenger compartment.

Individually controlled front and rear systems are used on Fleetwood Seventy-Five cars. Operating instructions for the front system, as explained in Section 2, also apply to these vehicles, except that the ventilation feature is not used on these cars. The rear system is a completely separate system with a large heater, blower and evaporator assembly mounted in the trunk. Also, a rear window de-fogger is integral with the rear system.

Rear system controls—The controls for the rear system, consisting of an on-off switch and a temperature dial, are located underneath a hinged

cover in the right rear armrest. The rear system may be turned on and off with the switch, and temperature may be controlled by the temperature dial. To reduce or increase the temperature, rotate the temperature dial to the interior temperature desired.

Since the system is completely automatic, it may be set at a comfortable temperature setting and left on with virtually no further adjustments required due to outside weather conditions. In

51

cold weather the heater will automatically turn on when engine water is warm enough. When outside temperatures are high, the system will automatically provide air conditioning.

In cool weather, warm air is delivered from the trunk unit through ducts leading into the rear doors, then into the rear passenger compartment through grilles located beneath the rear door armrests.

When the rear system is operating in the heater mode, warm air is also delivered from the trunk unit through ducts leading to grilles in the filler

panel between the rear seat and rear window, then onto the rear window. This provides effective rear window de-fogging.

In warm weather, cooled, de-humidified air is delivered through ducts in the roof and out of overhead grilles into the rear passenger compartment. The outlet grilles are equipped with a number of small openings for providing diffused cooled air. Each outlet is equipped with a hinged

door that may be opened to direct air toward the rear passengers.

With this system, comfort is automatically maintained to the individual requirements of the front and rear compartment passengers regardless of whether the division glass (on cars so equipped) is up or down, and despite car speed and variations in outside temperature.

REAR SEAT RADIO CONTROLS

Rear seat radio controls are optional on Fleetwood Seventy-Five cars equipped with an AM-FM

52

(Cont'd. on Page 57)

ON THE FOLLOWING THREE PAGES ARE

SOME IMPORTANT FACTS YOU SHOULD KNOW ABOUT AIR POLLUTION CONTROL SYSTEMS

BACKGROUND INFORMATION: During the combustion process in an automotive engine, certain hydrocarbons in the fuel are not burnt completely and are discharged into the engine crankcase and exhaust systems. Some carbon monoxide is also formed during the combustion process. This is also discharged into the exhaust system. On a per-car basis, concentrations of these combustion products are insignificant. Multiplied by millions of vehicles, however, crankcase and exhaust emissions combine with pollution products from other sources to contribute to the total air pollution problem.

General Motors has, since the late 1940's, been a leader in research and development work related to vehicle emissions, and control systems have been developed which are highly effective in reducing undesirable crankcase and exhaust emissions. This

work continues at an accelerated pace.

All new 1970 Cadillac passenger cars comply with all Federal and State laws and regulations for the Control of Air Pollution from New Motor Vehicles and New Motor Vehicle Engines.

YOUR ROLE IN CONTROLLING AIR POLLUTION: It is very important that the engine in your Cadillac vehicle be serviced regularly in order to maintain its efficiency and minimize emissions in normal driving.

The following pages describe the emission control systems on Cadillac vehicles and provide information on their proper maintenance. By following these recommended maintenance services you will help assure cleaner air and will provide a Better Running, longer lasting engine for greater air-around satisfaction, economy and performance.

52

What you should know about Air Pollution Control Systems on your Cadillac and the service they require

Positive Crankcase Ventilation (PCV)

All General Motors vehicles are equipped with Positive Crankcase Ventilation—a system which permits no crankcase emission to be discharged into the ambient air. To function properly, the system depends on the PCV Valve (smog valve) which recirculates and burns blow-by gases inside the engine. This valve must be clean in order to maintain efficient engine operation. See service recommendations presented on last page of this section.

Controlled Combustion System (CCS)

The Controlled Combustion System is designed to reduce exhaust air pollution by altering the combustion process. CCS includes a special air cleaner which incorporates thermostatic control of heated air to the carburetor, a special calibrated carburetor and distributor and related components. Complete effectiveness of the system, as well as full power and performance, depend upon proper engine maintenance. See service recommendations.

Transmission Controlled Spark (TCS)

Transmission Controlled Spark is used to further reduce exhaust emissions by permitting vacuum spark advance during high gear operation only. TCS includes a solenoid which controls vacuum advance to the distributor in response to a signal from a switch operated by the transmission. The system is designed to provide the advantages of advanced spark timing when it is most needed. TCS requires no regular service.

Evaporation Control System (Required Only in California)

General Motors vehicles sold in California are equipped with an Evaporation Control System. This system is designed to minimize the escape of fuel vapors to the atmosphere. Included in the system are a special fuel tank, liquid-vapor separator, carbon canister, canister purge hoses, and carburetor modifications. Fuel vapors which would otherwise escape to the atmosphere are directed into the carbon canister. The carbon adsorbs the vapors and stores them. The vapor is removed from the canister during periods of engine operation as manifold vacuum draws the vapors into the engine and burns them. The Evaporation Control System requires only periodic canister filter servicing. See Service Recommendations.

Note: The General Motors Evaporation Control System is designed to control evaporation losses from your car under all normal conditions using 9 lb. Reid Vapor Pressure fuel specified by California test requirements. However, if you should use fuel of abnormally high volatility for existing temperature conditions, you may detect a gasoline odor during or after driving in heavy traffic. If you find this objectionable, you may obtain relief by using a lower volatility fuel.

For Cleaner Air—Better Engine Performance—Follow These Periodic Service Recommendations

INTERVAL	SYSTEM	SERVICE
At first oil change—4 months or 3,000 miles (whichever occurs first)	Positive crankcase ventilation (PCV) Controlled Combustion System (CCS)	Check for proper operation. Clean crankcase ventilating breather. Set idle speed, ignition timing and fuel mixture to specifications on decal under hood.
At subsequent oil changes every 4 months or 3,000 miles (whichever occurs first)	Positive crankcase ventilation	Clean crankcase ventilating breather.*
Every 12 months or 12,000 miles (whichever occurs first)	Positive crankcase ventilation Controlled Combustion System (CCS) Evaporation Control System	Replace PCV valve. Inspect all hoses and fittings. Replace or clean as necessary. Set idle speed, ignition timing, and fuel mixture to specifications on decal under hood.** Replace filter in base of canister and inspect canister.* Note: Never replace fuel tank cap with other than the specified cap.

*Service breather or replace filter more frequently under dusty conditions.
**These adjustments are also included as part of the quality tune-up recommended at the same intervals.

(Cont'd. from Page 52)

signal seeking radio. The controls, consisting of an on-off volume control, a sensitivity control and a station selector button, are located underneath a hinged cover in the right rear armrest just forward of the air conditioning controls.

The on-off volume control knob turns the radio on and off or transfers control to the rear seat if the radio is already on, and regulates the volume. AM or FM frequency bands cannot be changed with the rear radio controls. Band selection is made with the push buttons at the radio. When

the radio is being operated by remote control, the station selector button glows red. To select stations, momentarily depress the station selector button until the desired program is received. The sensitivity control is below the on-off knob. Rotating it counterclockwise will permit the tuner to stop only on the more powerful stations. In the middle position, stations of slightly lower power will also be received. For maximum sensitivity, rotate the control clockwise to bring in the weaker stations.

With the rear seat radio controls on, the driver may reduce or increase the volume of the front speaker with the ring behind the right control knob, tune the radio manually or with the push buttons and change the AM-FM frequency bands. The radio can be operated normally with the front controls when the rear controls are turned off.

A radio foot control switch is available as a dealer-installed accessory for the AM-FM signal seeking radio on Fleetwood Seventy-Five cars.

SECTION 5

SERVICE
FOR YOUR
CAR

GUARDIAN MAINTENANCE FOR OWNER PROTECTION

THE IMPORTANCE OF PROTECTING YOUR INVESTMENT

Your purchase of a 1970 Cadillac was an important decision—one that represented a sizeable investment. Unquestionably, this was a wise decision since you have selected a fine automobile that, with reasonable care and use, will give you many years of safe, dependable service and enjoyment.

Now you are faced with another decision—to what extent are you willing to protect your investment? This should not be a difficult decision, but again it is an important one. Only *you* can make certain that your car receives the care it requires to retain the safety and dependability originally built into it.

Compared to the car of years past, your new Cadillac needs only a few regular maintenance services. But because there are only a few, do not minimize their importance. The demands placed on the present day automobile in all of the varying

conditions of traffic, temperature, high speed operation, etc. make it more important than ever that the car receives proper maintenance.

For example, regular attention to engine oil is essential. The oil level must be periodically checked and oil added whenever needed. Also, the oil should be changed at the intervals specified in this manual with the proper quality and viscosity of oil. If your engine should run excessively low on oil or if the oil has lost its lubricating qualities because of old age, serious engine damage could occur—damage that would not be covered under the New Vehicle Warranty.

It is also important that the safety related components of your car be checked regularly. For example, the exhaust system should be looked at whenever your car is on the hoist for an oil change and corrections made to any defects noted. If leaks in the system are ignored, exhaust fumes could possibly seep into the passenger compartment resulting in serious consequences to the occupants.

All of the recommended maintenance items for your Cadillac are discussed in this section of this manual and summarized in the "Maintenance Schedule" beginning on page 62. In addition, be

sure to read the colored supplement entitled "Maintaining Safety and Dependability" for tips on keeping your car in optimum condition.

GUARDIAN MAINTENANCE SERVICE

The quality of maintenance your new car receives is as important as the regularity with which it is serviced. The "Guardian Maintenance Service" program has been developed by Cadillac Motor Car Division in cooperation with Cadillac Dealers to provide nationwide quality in customer service. The program includes the training of dealer technicians at General Motors Training Centers throughout the country and is supported with a continuous follow-up of publications, films, and other service information. The use of genuine General Motors parts and accessories, which have the same high quality standards as original equipment parts, and the use of Cadillac approved tools developed and tested for use by Cadillac Dealers also contribute to the high quality of Guardian Maintenance Service.

No one else has more knowledge or is better prepared to service your Cadillac than your Cadillac Dealer. Return to him for Guardian Maintenance Service at the intervals designated in this manual.

OWNER RESPONSIBILITY

Normal maintenance services and replacement of service items as described in this section are the responsibility of the owner and as such are not considered defects in material and workmanship under the provisions of the Cadillac New Vehicle Warranty. Weather and atmospheric conditions, varying road surfaces, individual driving habits and vehicle usage greatly contribute to the need for maintenance services. To help you get the utmost in satisfaction and extended service from your Cadillac, the principal services and replacement items are summarized below and on pages 60 and 61.

MAINTENANCE SERVICES

Lubrication—Heat, cold, dusty conditions or unusually wet weather all contribute to the need for lubrication at regular intervals. In addition to the regular maintenance services at recommended intervals, throttle linkage, parking brake linkage, and body parts such as door and hood latches and hinges and weather stripping, should receive attention at every engine oil change. As part of the periodic lubrication service, all lubricant and fluid levels should be checked and replenished as necessary.

Wheel Alignment and Wheel Balance—are affected by operating conditions such as hitting chuck holes and curbs, rapid starts and stops and tire skidding. Wheel alignment and balancing service contribute to longer tire life and better vehicle handling.

Tire Rotation—Rapid acceleration, quick stops, car speed and loading affect tire life and can cause uneven wear. Tires should be rotated regularly for uniform wear and maximum life.

Brake Services—Brake linings are subject to wear from usage depending upon driving conditions and driving habits of each individual driver. Periodic check of brake lining condition by a qualified mechanic is recommended for safe operation. When the brake system requires service, replace with genuine GM parts.

Engine Oil Change and Filters—Changing engine oil, and air, fuel and oil filters at recommended intervals is the owner's best investment in prolonged engine life, efficiency and performance. When replacement is necessary, always insist on AC ACron filters.

Transmission Maintenance—The Cadillac transmission does not require any internal adjustments.

59

The fluid used to fill the transmission at the factory is a high quality DEXRON[®] automatic transmission fluid. Extended use and contamination affect transmission fluid. To assure efficient operation, it is important that proper fluid level be maintained. Transmission oil pan should be drained and fresh fluid added, and strainer replaced at the recommended intervals. DEXRON[®] fluid is recommended for automatic transmissions.

Emission Control—A check of the items affecting vehicle emission control at the first oil change (4 months or 6,000 miles, whichever occurs first) is important to control hydrocarbon and carbon monoxide emissions within levels established by government standards, and thus reduce air pollution. Subsequent checks should be made every 12 months or 12,000 miles, whichever occurs first. This check involves the adjustment of carburetor idle speed, ignition timing, idle fuel mixture and an operational check of the Positive Crankcase Ventilation Valve (PCV) and related parts. Climatic conditions, type of operation, wear and contamination can affect these engine adjustments and proper functioning of the PCV valve. Checking for proper operation will not only contribute to the control

of exhaust and engine emissions, but will improve performance and economy.

Engine Tune-Up and Electrical Checks—Fuel and electrical systems are subject to wear and contamination and require periodic cleaning and adjustments to maintain maximum economy and performance. These same factors which have an important effect in the control of air pollution are included in engine tune-ups, which are recommended at one year or 12,000 mile intervals. For maximum performance and economy for your Cadillac, replace with GM parts which are identified by one of these trademarks.

Positive Crankcase Ventilation Valve Replacement—Crankcase vapors and other impurities can cause malfunction of the crankcase ventilation PCV valve, resulting in an increase of crankcase emissions and cause improper engine idle conditions. Regular replacement of the PCV valve is recommended at 12-month or 12,000-mile intervals. Always specify an AC PCV valve at replacement time.

Belt Adjustments—To assure proper performance of belt-driven engine components, all belts should be checked and adjusted periodically.

Carbon Deposits—A degree of carbon buildup is normal in the combustion chambers of any gasoline engine, depending upon oil and fuel quality and operating conditions. For best results, follow the fuel and oil recommendations in this manual.

Air Conditioner—Spring and fall maintenance is necessary to assure proper performance. Adding of refrigerant may be necessary from time to time.

Paint, Chrome, Convertible Top and Trim—are affected by normal wear and exposure. Proper maintenance and care of these items can add to their appearance and durability.

REPLACEMENT ITEMS

Brake linings—are directly affected by driving habits and use; the replacement of brake linings and the reconditioning of brake drums and discs should be performed when necessary.

60

Spark Plugs and Ignition Points—are subject to wear and contamination. They should be inspected periodically and replaced if necessary for maximum engine performance and economy. For maximum performance and economy for your Cadillac, replace with General Motors parts which

are identified by one of these trademarks.

Distributor Cam Lubrication—Maintain proper ignition point dwell by servicing the distributor cam lubricator at recommended intervals.

Filters—perform the important function of cleaning air, fuel or oil and should be serviced at recommended intervals.

Wiper Blades—life is dependent upon use and climatic conditions. They should be replaced when necessary.

OWNER SAFETY CHECKS

Take a few minutes, periodically, to check the items listed below for proper operation. See "Maintaining Safety and Dependability" section for instructions on the recommended method of checking. Any deficiencies noted should be corrected without delay.

OWNER PROTECTION MAINTENANCE SCHEDULE

The following Maintenance Schedule will best assure your Cadillac's continued fine performance.

Interval	Service To Be Performed	Interval	Service To Be Performed	Interval	Service To Be Performed
Every 4 months, never to exceed 6,000 miles	Change engine oil.	Every 4 months, never to exceed 6,000 miles (cont'd.)	Inspect complete exhaust system for broken or damaged parts, deterioration, broken seams or loose connections which may cause leaks. Replace or adjust as required. Whenever a new muffler is installed, all pipes and resonators rearward of that muffler should be replaced.	Every 4 months, never to exceed 6,000 miles (cont'd.)	Check power steering fluid level.
	Clean crankcase ventilating breather on left rocker arm cover.		Check brake fluid level.		Check coolant level in overflow reservoir.
	Inspect front and rear suspension and steering linkage.		Check brake linings for wear.		Check for fuel, water and oil leaks.
	Check power steering lines and hoses for leaks, deterioration, and chafing.		Check battery electrolyte level.		Check items affecting vehicle emission control and operation of PCV valve and related parts at first oil change only.
	Check tires for damage, wear and proper inflation.		Check transmission fluid level.	At first oil change and every second oil change thereafter	Change engine oil filter.
	Check underside of car for excess dirt (mud, gravel, tar, etc.), paying particular attention to propeller shaft, wheels, brake drums, and disc brake components.				Check all engine drive belts. Adjust if necessary.
					Check brake pedals (parking and service) for travel.

IMPORTANT! For maximum performance and economy keep your GM car oil GM. Specify General Motors parts identified by one of these trademarks.

Interval	Service To Be Performed
Every 6,000 miles	Rotate tires. Tire rotation may be required more frequently on Eldorado (4,000 miles) if car is driven under extreme operating conditions.
Every 6 months or 6,000 miles	Check all brake lines for leaks. Inspect brake hoses for cracking, abrasions, cuts or tears in the outer covering.
Every 12 months or 12,000 miles	Lubricate parking brake cables (every six months after the first inspection). Replace positive crankcase ventilator valve.

Interval	Service To Be Performed
Every 12 months or 12,000 miles (cont'd.)	Clean, inspect or replace, if necessary, crankcase ventilation system hose, fittings and attaching parts. Replace filter in base of carbon canister and inspect canister. (California cars only). Engine tune-up. Rotate distributor cam lubricator one-half turn. Apply cam lubricant. Change fuel filter. Inspect carburetor air cleaner element. Replace if necessary. Tighten rocker arm cover screws. Check headlight aim.

IMPORTANT! For maximum performance and economy keep your GM car all GM. Specify General Motors parts identified by one of these trademarks.

Interval	Service To Be Performed
Every 24,000 miles	Drain transmission bottom pan every 24,000 miles, and add fresh DEXRON® Automatic Transmission Fluid (normal passenger car usage). Replace transmission filter after the first 24,000 miles, or in any case of major transmission failure.
2 years or 24,000 miles	Replace carburetor air cleaner element. More frequent replacement may be necessary if vehicle is driven in dusty areas. Replace distributor cam lubricator. Clean and oil clock.

Interval	Service To Be Performed
Every 2 years	Replace radiator and heater hoses. Flush cooling system and refill with ethylene glycol base coolant solution.
Every spring	Lubricate accelerator linkage. Check transmission for leaks, and lubricate linkage. Check and open muffler and resonator drain holes. Check differential for leaks (all except Eldorado). Check final drive assembly for leaks (Eldorado only). Inspect and open body and door drain holes.

Interval	Service To Be Performed
Every spring (cont'd.)	Test cooling system for leaks and coolant for freeze protection. Leak test and check complete operation of air conditioning system. Check lap belts, shoulder belts, buckles, retractors and anchors for loose connections and damage. Check operation of windshield wipers and washers. Replace wiper blades if necessary. Check operation of seat back latches.

IMPORTANT! For maximum performance and economy keep your GM car all GM. Specify General Motors parts identified by one of these trademarks.

Interval	Service To Be Performed
Every Spring (cont'd.)	Check rear view mirrors and sun visors to make certain that friction joints are properly adjusted. Lubricate all hood primary and secondary latch mechanisms and hinges. Check operation of hood latches. Lubricate door hinges, etc. Check operation of all door latches. Lubricate fuel filler door. Check engine for oil leaks. Check condition of radiator and heater hoses and replace as necessary. Check operation of engine and water temperature warning lights. Check all exterior and interior lighting.

Interval	Service To Be Performed
Every fall	Lubricate accelerator linkage. Check transmission for leaks and lubricate linkage. Check and open muffler and resonator drain holes. Check differential for leaks (all except Eldorado). Check final drive assembly for leaks (Eldorado only). Inspect and open body and door drain holes. Test cooling system for leaks and coolant for freeze protection. Leak test and check complete operation of air conditioning system.

Interval	Service To Be Performed
Every fall (cont'd.)	Check lap belts, shoulder belts, buckles, retractors and anchors for loose connections and damage. Check operation of windshield wipers and washers. Replace wiper blades if necessary. Check operation of seat back latches. Check rear view mirrors and sun visors to make certain that friction joints are properly adjusted. Adjust mirror so that it does not interfere with right hand sun visor when it is lowered. Check choke operation.

Interval	Service To Be Performed
Every fall (cont'd.)	Clean battery terminals and clamps. Check operation of defroster. Lubricate all hood primary and secondary latch mechanisms and hinges. Check operation of hood latches. Lubricate door hinges, etc. Check operation of all door latches. Lubricate fuel filler door. Check engine for oil leaks. Check condition of radiator and heater hoses and replace as necessary. Check operation of engine and water temperature warning lights. Check all exterior and interior lighting.

IMPORTANT! For maximum performance and economy keep your GM car all GM. Specify General Motors parts identified by one of these trademarks.

CADILLAC SERVICE
Superior . . . Responsible

To help you secure maximum satisfaction with your new Cadillac, it has been inspected and conditioned by your Cadillac Dealer according to Cadillac's established pre-delivery inspection schedule. Should you find it necessary to have any of these adjustments or alignments rechecked and/or performed within the first 90 days or 4,000 miles after delivery, whichever comes first, your Cadillac dealer will make the adjustment at no additional cost. These adjustments include:

- Front wheel and steering alignment
- Window adjustments
- Engine adjustments
- Any other adjustments or alignments considered a part of pre-delivery conditioning

You are entitled to receive any of the above adjustments from any Cadillac dealer, provided that you are the original owner, that you ask for these services within 90 days or 4,000 miles (whichever comes first) after you took delivery of

the car, and that the misalignment or misadjustment was not induced by neglect or abuse. Your selling Cadillac dealer, however, prefers that you return the car to him, since he has a personal and continuing interest in you, as his new car customer, to assure your complete satisfaction with your Cadillac.

YOUR RESPONSIBILITY

Regardless of whether you return to your selling dealer, or ask another dealer to perform one of these adjustments for you, it is important that you have it done before the expiration of the 90-day/4,000-mile limitation. Beyond this period, the costs of adjustments or alignments become owner responsibility.

Items Considered a Part of Normal Owner Maintenance and not Covered by the New Vehicle Warranty

All "Normal Maintenance Services" including certain "Replacement Items considered a part of Normal Maintenance," such as:

- Belt adjustments
- Brake adjustments and maintenance service
- Replacement of brake linings or brake discs due to wear

- Chassis lubrication services
- Cleaning engine lubrication system
- Cleaning or replacing filters (fuel, air and oil)
- Cooling system inspection and maintenance services
- Engine oil change
- Engine tune-up—servicing or replacing spark plugs, ignition points, condenser
- Positive crankcase ventilator valve
- Recharging battery
- Removing carbon deposits and grinding valves
- Repair or replacement of any parts where failures caused by lack of performance of required maintenance as specified by Cadillac
- Normal deterioration of trim, convertible tops and chrome due to use and exposure
- Deterioration of paint due to normal use or exposure
- Spring and fall inspection and maintenance services on air conditioner
- Transmission fluid and filter replacements
- Wheel alignment and balancing
- Tires (covered by special tire manufacturer's warranty)

Cadillac service—Authorized Cadillac Dealers are well qualified to assist you in the maintenance of your car. For the best in Cadillac Guardian Maintenance service, take your Cadillac to an Authorized Cadillac Dealer and specify General Motors parts identified by one of these trade-marks.

FUEL REQUIREMENTS

Your Cadillac is designed to operate efficiently on "premium" grade fuels commonly sold in the United States and Canada. Use of a fuel that is too low in anti-knock quality will result in "spark knock." Since the anti-knock quality of all premium grade gasolines is not the same, and factors such as altitude, terrain and air temperature affect operating efficiency, knocking may result even though you are using the grade of fuel recommended for your engine. If persistent knocking is encountered, it may be necessary to change to a higher grade of gasoline. If knocking continues, consult your Authorized Cadillac Dealer.

In any case, continuous or excessive knocking may result in engine damage and constitutes misuse of the engine for which the Cadillac Motor Car Division is not responsible under terms of the Cadillac New Vehicle Warranty.

Operation in foreign countries—If you plan to drive your Cadillac outside the continental limits of the United States or Canada, there is a possibility that the best fuels available are so low in anti-knock quality that excessive knocking and serious engine damage may result from their use.

To minimize this possibility, write to the Cadillac Motor Car Division, Service Department, Detroit Michigan 48232 giving:

1. The car's vehicle identification number (obtain from car registration or title or on plate on top of instrument panel visible through lower left hand corner of windshield).
2. The country or countries in which you plan to travel.

You will be furnished details of adjustments or modifications that should be made to your engine at your Cadillac dealership prior to your departure. Failure to make the necessary changes to your car and subsequent operation under conditions of continuous or excessive knocking constitutes misuse of the engine for which the Cadillac Motor Car Division is not responsible under the terms of the Cadillac New Vehicle Warranty. After arriving in a foreign country, determine and use the best fuels available.

Fuel Tank—The fuel tank, filler pipe and all tank connections have been carefully designed to reduce fuel leakage after termination of certain

67

collisions. This design reduces fire hazards in these collisions.

Capacity of the fuel tank is approximately 26 gallons (21½ Imperial gallons) on all styles except the Eldorado which has a 24 gallon (20 Imperial gallons) capacity fuel tank and the Commercial Chassis, which has a 20 gallon (16½ Imperial gallons) capacity fuel tank. The last few gallons of

gasoline must be added very slowly to completely fill fuel tank.

All cars shipped to the State of California have a fuel tank capacity of approximately two gallons less than specified above. See page 83.

The gasoline filler cap is located behind the rear license plate. To gain access to the cap, pull out on the top of the license plate.

Refer to Section 3 for fuel filler cap location on the Fleetwood Eldorado.

CAUTION: Gasoline is flammable and explosive under certain conditions. Always stop the engine and do not smoke or allow open flames or sparks near the vehicle when refueling. If gasoline fumes are noticed while driving, the cause should be determined and corrected without delay.

ENGINE OIL RECOMMENDATIONS

Use only engine oil which meets oil quality standard GM 6041-M. High quality oils which are intended for service MS and pass car makers' tests are of this quality. The oil change interval (see section on "Engine Oil Change Interval") and

the new vehicle warranty are based on the use of oils that meet these requirements.

NOTE: Non-detergent and other low quality oils are specifically not recommended. The use of proper engine oils and oil change intervals are your best assurance of continued reliability and performance from your Cadillac engine.

Checking oil level—Engine oil should be maintained at the proper level. Check engine oil level

68

with engine hot; wait several minutes after operating the engine. This will allow the normal oil accumulation in the engine to drain back in the crankcase. To check the level, remove the oil dipstick, wipe it clean and reinsert it for an accurate reading. The oil-dipstick is marked "Add 1 Qt." and "FULL". Do not add oil if oil level is above the "Add 1 Qt." line. The oil level should be main-

tained in the safety margin, neither going above the "FULL" line nor appreciably below the "Add 1 Qt." line. Reseat the dipstick firmly after taking the reading. Engine oil filler cap is located on top of right rocker arm cover.

NOTE: The dipstick is also marked, "Use GM 6041-M Quality MS Oil," as a reminder to use only high quality oils as prescribed under "Engine Oil Recommendations."

Supplemental engine oil additives—The regular use of supplemental additives is specifically not recommended and will increase operating costs. However, in cases of specific problems which may arise under certain conditions, additive supplements are available that can effectively and economically solve these problems without causing other difficulties. For example, if higher detergency is required to reduce varnish and sludge deposits resulting from some unusual operational difficulty, a thoroughly tested and approved concentrate—"Engine Oil Supplement"—is available at your Cadillac dealer. It is suggested that, in the event of an operational problem, you consult your dealer for advice.

Engine oil change interval—Change oil each four months. If more than 6,000 miles are driven

in a 4-month period, change oil each 6,000 miles.

In certain types of service, including operation under dusty conditions, trailer pulling, extensive idling or short trip operation at freezing temperatures (engine not warmed up thoroughly), **THE OIL CHANGE INTERVALS SHOULD NOT EXCEED 2 MONTHS, OR 3,000 MILES**, whichever occurs first. Operation in dust storms may require an immediate change of oil. See your Cadillac dealer for advice on the frequency of oil and filter changes under unusual driving conditions.

The above recommendations apply to the first change as well as subsequent oil changes. The oil change interval for your Cadillac engine is based on the use of oils that meet the requirements indicated in the section on "Engine Oil Recommendations." Oil change intervals longer than those listed above will result in serious reductions in engine life and may affect Cadillac's obligation under the provisions of the new vehicle warranty.

A high quality MS oil meeting General Motors Standard GM 6041-M was installed in your engine at the factory. It is not necessary to change this factory-installed oil prior to the recommended

normal change period. However, the oil level should be checked more frequently during the break-in period since somewhat higher oil consumption is normal until the piston rings become seated.

Engine oil capacity—Your Cadillac engine requires four quarts of oil (five quarts on Eldorados) on a refill after the crankcase has been drained. One additional quart is required when the oil filter is changed. It is normal to add some oil before the drain period. Requirements will vary, depending on the type of driving you do, but the addition of one quart each 800 to 1,000 miles would not be considered excessive.

Recommended viscosity—The following chart will serve as a guide for selecting the proper oil viscosity.

NOTE: SAE 5W and 5W-20 oils are not recommended for sustained high speed driving. SAE 30 oils may be used at temperatures above 60°F.

The proper viscosity helps assure good cold and hot starting by reducing friction and thus increasing cranking speed.

Temperature range anticipated before next oil change, °F.

Engine oil filter replacement—The engine oil filter should be replaced at the first oil change and every second oil change thereafter. This recommendation is based on the use of engine oils that meet the requirements indicated in the section on "Engine Oil Recommendations," and the use of a quality oil filter. AC Oil Filters provide maximum engine protection.

ENGINE COOLING

The cooling system used on all 1970 Cadillac cars is of the closed type. **The radiator cap should not be removed to check coolant level.** It should be removed only to drain and refill the cooling system every two years.

CAUTION: Radiator cap must be tight when reinstalled. Make certain red stripe on cap lines up with red stripe on instruction label on radiator cradle. Radiator pressure caps should be checked periodically for proper operation and replaced as required with the applicable AC type.

Coolant level should be checked at each engine oil change while the engine is at normal operating temperature. Check coolant level at the coolant reservoir located on the right side of the radiator when viewed from front of car. Proper coolant level at normal operating temperature is between

the "FULL" and "ADD" marks on the coolant reservoir. When level drops to "ADD" mark, add one quart ethylene glycol and one quart water to reservoir (not at radiator cap).

NOTE: It is normal for the level to be below the "ADD" mark on the reservoir when the system cools and is below normal operating temperature.

Thermostat—The cooling system is protected and controlled by a thermostat installed in the engine coolant outlet to maintain a satisfactory operating temperature of the engine. This thermostat is designed for continuous use through both winter and summer and need not be changed seasonally. When replacement is necessary, specify United Delco parts.

Coolant recommendations—The inhibited year-around engine coolant used to fill the cooling system at the factory, is a high quality solution that meets General Motors Specification 1899-M. This factory-fill coolant solution is formulated to withstand two full calendar years of normal operation without draining or adding inhibitors, provided the same concentration of coolant is added if the system needs additional fluid between drain periods. The original factory fill coolant provides

freezing protection to -40°F .

Every two years, the cooling system should be serviced as follows:

1. Drain coolant, when hot, through the radiator drain valve.
2. Close valve and add sufficient plain water to fill system.
3. Run engine with control lever in the "ICE" position and the temperature dial set at 85° until warm air comes out of the defroster. On non-air conditioned cars, place heater control lever in "DEFROST" position and move temperature control lever to the extreme right.
4. Drain and refill the system as described in steps 1, 2 and 3 a sufficient number of times until the drained liquid is colorless.
5. Allow system to drain completely and then close radiator drain valve tightly.
6. Add the necessary amount of high quality inhibited ethylene glycol base coolant meeting GM Specification 1899-M to provide maximum cooling efficiency and the required freezing and corrosion protection (at least to -20°F).

7. Run engine, as in step 3, until normal operating temperature is reached.
8. Check coolant level in the reservoir and add coolant as necessary to bring level up to the "FULL" mark.

Deterioration of the hoses in the engine compartment takes place over a period of time due to exposure to the high temperatures in this environment. To protect the engine from damage due to coolant loss, the hoses and clamps in the engine cooling and heater systems should be replaced after 2 years of service.

COOLING SYSTEM CAPACITY	
All cars except Fleetwood Seventy-Fives with heater only	21.3 U.S. qts. (18.0 Imperial qts.)
with Air Conditioner	21.8 U.S. qts. (18 $\frac{1}{4}$ Imperial qts.)
Fleetwood Seventy-Fives	24.8 U.S. qts. (20 $\frac{3}{4}$ Imperial qts.)

It is the owner's responsibility to keep the freeze protection at a level commensurate with the temperatures which may occur in the area in which the vehicle will be operated. Regardless of whether freezing temperatures are or are not

expected, cooling system protection should be maintained at least to -20°F . to provide adequate corrosion protection. When coolant additions are required because of coolant loss or to provide additional protection against freezing at temperatures lower than -20°F . (-32°F . in Canada and -40°F . in Alaska) a sufficient amount of an ethylene glycol base coolant meeting GM Specification 1899-M should be used.

NOTE: Alcohol or methanol base coolants or plain water are not recommended for your Cadillac at any time.

PREVENTIVE MAINTENANCE

Preventive maintenance for your Cadillac is based on the Manufacturer's recommendations. Details are outlined beginning on Page 59. Consult your dealer for additional services that may be needed due to local climatic conditions or driving habits.

BATTERY FLUID LEVEL

Battery fluid level should be checked at every engine oil change. However, in warm weather, fluid level should be checked at two-week intervals. Maintain battery fluid level up to the bottom of the slots in each cell.

A fluid level indicator is provided on top of the second cell cap from the positive battery post. When fluid level is normal, a black spot appears on the "eye" in the top of this cap. An off-white spot indicates that fluid level is low. In such case, check all cells and add water, as necessary, to bring them to their proper level.

Ordinary tap water may be used, except in areas where the water is known to be exceptionally hard or to have a high mineral or alkali content. In these areas use distilled water to fill the battery. If water is added during freezing weather, drive the car a minimum of five or six miles. This mixes the added water with the electrolyte and will prevent it from freezing and damaging the battery.

Have the battery charge checked regularly during extremely cold weather. Make sure the cables are clean and tightly clamped to the battery terminals.

BATTERY-GAS WARNING

CAUTION: Since normal battery chemical action generates hydrogen gas which is explosive when mixed with air, never expose the battery to an open flame or electric spark. Also, avoid getting battery fluid, which is a sulfuric acid solution, on skin, on clothing or other fabrics, or on painted surfaces. Eye protection should be worn while working on the battery for any reason.

SUSPENSION

The suspension and steering linkage connections do not require periodic lubrication. Suspension and steering linkage connections are packed with a special long-life lubricant and normally need repacking only when damaged seals are replaced. Steering linkage pivots must be replaced when worn or loose.

The rear suspension system is maintenance free. However, it is recommended that it be inspected periodically by an Authorized Cadillac

Dealer to make certain that no accidental damage has occurred that could affect its performance.

WINDSHIELD WASHER SOLVENT

Use GM Optikleem windshield washer solvent to prevent freezing and for better cleaning of the windshield under all conditions."

CAUTION: Follow the directions on the label for correct mixture, otherwise paint damage may result. Do not mix other windshield washer solvents with Optikleem as they may not be compatible.

CARBURETOR AIR CLEANER

The carburetor air cleaner element should be inspected every 12,000 miles and replaced if necessary. Inspect and replace more frequently if the car is operated in dusty areas.

Install a new filter element if needed at time of inspection, or at least every 24,000 miles. The element should not be cleaned. For maximum protection specify an AC ACron air filter element.

73

CAUTION: In addition to its function of filtering air drawn into the engine through the carburetor, the air cleaner also acts as a flame arrester in the event the engine backfires. The air cleaner should be installed at all times unless temporary removal is necessary during repair or maintenance of the vehicle, because back-firing may cause fire in the engine compartment.

FUEL FILTER

The fuel filter is located in the fuel pump behind the outlet fitting. The filter should be replaced every 12 months or 12,000 miles, whichever occurs first. More frequent service is necessary under unusual operating conditions. The filter stops small dirt particles that may cause carburetor flooding. When replacement is necessary, always insist on AC Acron Filters.

TRANSMISSION FLUID AND FILTER

Under normal driving conditions, the transmission bottom pan should be drained every 24,000 miles and new fluid added.

Severe service—If your car is driven extensively in heavy city traffic during hot weather; or is in

commercial use, such as limousine service, where the engine idles for long periods; or is used to pull a trailer, change fluid every 12,000 miles.

The filter should be replaced only after the first 24,000 miles.

CHECKING TRANSMISSION FLUID LEVEL

The transmission dipstick and filler tube is located on the right-rear side of the engine (left center on the Eldorado).

Fluid level should be checked at every engine oil change. Since the fluid level is affected by transmission temperature, it should be checked only at normal operating temperature.

For an accurate fluid level check, drive the car several miles, making frequent starts and stops, to bring the transmission up to normal operating temperature (approximately 180-190°F.). Park the car on a level surface, place selector lever in "Park", and leave the engine running, remove dipstick, wipe clean, reinsert until the cap seats, remove and note reading. If fluid level is at or below the ADD mark, add sufficient fluid to raise the level to the FULL mark. One pint raises the level from ADD to FULL. Do not overfill.

CAUTION: Avoid overfilling as foaming may occur. Too low a level will cause loss of drive when cold. Either condition can cause transmission damage.

If it is impractical to check the fluid level at normal operating temperature, consult your Authorized Cadillac Dealer for the adjusted levels based on other temperatures.

MANUFACTURER RECOMMENDED FLUIDS AND LUBRICANTS

Automatic transmission fluid recommendation—General Motors DEXRON® Automatic Transmission Fluid, which has been especially formulated and tested for use in your automatic transmission, is recommended. Other Automatic Transmission Fluids identified with the mark DEXRON® are also recommended.

Power steering system—Special GM Power Steering Fluid.

Brake system—Delco Supreme 11 Super Heavy Duty Brake Fluid or brake fluids conforming to SAE J-1703 specifications. (SAE 70-R3 may also be used.)

74

Standard rear axle and final drive unit on Eldorado—SAE 90 Multi-Purpose Lubricant conforming to MIL-L-2105-B specifications.

Controlled differential—Special Rear Axle lubricant available from Authorized Cadillac Dealers.

Front suspension system and steering linkage—Special lubricant used. Periodic inspection only. See your Authorized Cadillac Dealer.

HOISTS—SERVICE LIFTING EQUIPMENT

The preferred type of hoist for lifting all 1970 Cadillac cars is one that engages the front suspension and rear axle, or all four wheels.

When using lifting equipment that engages the suspension system, the car should be centered over the hoist so that the hoist arms engage the flattened portion of the front suspension lower arms.

If a frame engaging hoist is used, certain precautions must be observed. Do NOT use a frame engaging hoist to raise the Fleetwood Seventy-Five sedan and limousine, or the commercial chassis.

Refer to Section 3 for lifting instructions for the Eldorado.

TRAILER PULLING

Since passenger cars are designed and intended to be used primarily as passenger conveyances, towing a trailer may affect handling, durability and economy. Maximum satisfaction and safety will be derived through use of proper equipment and avoiding overloads and other abusive operation.

For towing trailers heavier than 2,000 pounds, it is recommended that an appropriate load equalizing hitch be purchased from a reliable manufacturer. Purchase of bumper and axle type hitches is not recommended. Rental installations should be made only in accord with installation and usage instructions of a reputable trailer agency. To assist in attaining proper handling of the car-trailer combination, it is important that trailer tongue loads be maintained at approximately 10% of loaded trailer weight. Tongue loads can be adjusted by proper distribution of the load in the trailer, and can be checked by weighing separately the loaded trailer and then the tongue. Tire inflation recommendations outlined in this Owner's Manual should be followed. When towing trailers, the allowable passenger and cargo load (as shown in the instructions for tire

inflation pressures, located on page 79) must be reduced by an amount equal to the trailer tongue load on the trailer hitch.

The fluid in your automatic transmission should be changed each 12,000 miles and the oil change interval should not exceed two months, or 3,000 miles, when the car is being used to pull a trailer.

NOTE: Do not tap into the car's hydraulic brake system to couple with a trailer hydraulic brake system.

NOTE: Whenever a trailer hitch is removed, be certain to have any mounting holes in the underbody properly sealed to prevent possible entry of exhaust fumes, dirt or water.

General information on towing trailers is available and can be obtained by writing to Cadillac Motor Car Division, Service Department, Detroit, Michigan 48232.

EMERGENCY WHEEL CHANGING INSTRUCTIONS

CAUTION: Stand clear of, and never get beneath the car when it is supported only by a jack; the jack is designed only for use when changing wheels. Always use safety

75

stands to support the car if necessary to get underneath. On cars equipped with a Controlled Differential do not run the engine with one drive wheel off the ground since the car may drive through the wheel remaining on the ground.

On cars with a shelf-mounted spare wheel and tire, the rack bar is stored on the shelf in the luggage compartment just forward of the spare tire. The jack base is stored on top of the wheel (secured by a through-bolt and wing nut) and the

jack handle, jack hook, and wedge block are stored under the tire.

The spare wheel and tire on the convertible and Fleetwood Seventy-Five sedan and limousine is floor mounted. The rack bar, jack hook and wedge block are stored on the right side of the luggage compartment. The jack base is stored under the cover on top of the wheel and the jack handle is stored under the tire.

To change wheel, proceed as follows:

Refer to Section 3 for wheel changing instructions for the Eldorado.

1. If it is at all possible, park car on level ground, off the highway.
2. Place shift selector in PARK position, shut off engine, set parking brake, and activate Hazard Warning Flasher.
3. Remove spare tire and jack components from luggage compartment.
4. Assemble jack by inserting rack bar in base. Install jack hook and handle on jack.
5. Holding jack hook against bumper, position jack as shown on page 77; with jack hook adjacent to bumper seam on front bumper and approximately 4" inboard of seam on rear bumper. Engage tip of jack hook in notch on bottom edge of bumper.

CAUTION: Damage to bumper will result if jack hook is not positioned in notch on bottom edge of front and rear bumper.

CAUTION: Before jacking up the car, block the wheel diagonally opposite from the jack position with the wedge block provided.

76

6. Reposition jack base so that rack bar is vertical and raise jack until snug.
7. When removing rear wheel, remove wheel opening cover by reaching under the cover, forward of center, and unhooking and pulling down on the locking rod located on the bottom inside edge of the cover flange.

8. Remove wheel disc using tip of jack handle.
9. Loosen wheel nuts $\frac{1}{2}$ turn (counterclockwise).
10. Raise car on jack and remove wheel mounting nuts.

CAUTION: Before removing deflated tire and wheel assembly, make certain car is raised sufficiently to permit installation of fully inflated tire.

11. Install spare wheel and tire assembly, making certain wheel mounting nuts are tightened securely. Lower car, remove jack and recheck wheel nuts for tightness.

Use rubber covered portion of jack handle to install wheel disc. Reinstall wheel opening cover if previously removed. Lock cover by hooking the locking rod on the cover flange.

TIRES

The factory installed tires on your car are selected to provide the best all around tire performance for all normal operation. When inflated as recommended in the tire inflation pressure table, they have the load carrying capacity to operate satisfactorily at all loads up to and including the full rated load specified in that table at all normal highway speeds. In addition, for those owners who prefer the utmost in comfort, optional tire inflation pressures may be used when loads of five passengers or less are carried.

77

For the added convenience of owners, many Cadillac dealers are equipped to handle tire warranty adjustments on certain makes of tires provided on 1970 Cadillac cars.

Only those tires of the size shown in the tire usage table are recommended for use on Cadillac cars. Use of any other size of tire may seriously affect ride, handling, ground clearance, tire clearances, and speedometer calibration.

To achieve best all around vehicle handling performance, fiberglass belted tires, radial ply tires, and bias ply tires should not be mixed on the same car.

Tire traction—A decrease in driving, cornering, and braking traction occurs when water, snow, ice, gravel, or other material is on the road surface. Driving practices and car speed should be adjusted to the road conditions.

When driving on wet or slushy roads, it is possible for a wedge of water to build up between the tire and road surface. This phenomenon, known as hydroplaning, may cause partial or complete loss of traction, which adversely affects vehicle control and stopping ability. To reduce the possibility of traction loss, the following precautions should be observed:

1. Slow down during rainstorms or when roads are slushy.
2. Slow down if road has standing water or puddles.
3. Replace tires when tread wear indicators are visible.
4. Keep tires properly inflated.

For temporary assistance when traction is lost on ice or snow, the use of AC Liquid Tire Chain is recommended.

Tread wear indicators—The original equipment tires on your Cadillac incorporate built-in tread wear indicators to assist you in determining when your tires have been worn to the point of needing replacement. These indicators are molded into the bottom of the tread grooves and will appear

as $\frac{1}{2}$ inch wide bands when tire tread depth becomes $\frac{1}{16}$ of an inch. When the indicators appear in two or more adjacent grooves, tire replacement due to tread wear is recommended.

Tire rotation—To equalize tire wear it is recommended that the tires be rotated every 6,000 miles. Upon rotation, tire pressure must be adjusted (front and rear) in accordance with the recommendations in the tire inflation pressure table.

On the Fleetwood Eldorado, tire rotation may be required more frequently if the car is driven under extreme operating conditions, such as severe and prolonged cornering, rapid acceleration and high speed driving. A suggested rotation interval under extreme operating conditions is every 4,000 miles.

78

TIRE USAGE AND INFLATION PRESSURE TABLE—Pounds per square inch (cold)

Calais, DeVille, Fleetwood Sixty Special & Brougham 		TIRE SIZE DESIGNATION L78-15 (Load Range B)	
STANDARD INFLATION PRESSURES	For all loads, including full rated load, 6 passengers plus 200 lb. trunk load (1100 lb. total)	Front 22 p.s.i. Rear 26 p.s.i.	
OPTIONAL INFLATION PRESSURES	For reduced loads, 1 to 5 passengers (750 lb. total)	Front 22 p.s.i. Rear 22 p.s.i.	
Fleetwood Eldorado 		TIRE SIZE DESIGNATION L78-15 (Load Range B)	
STANDARD INFLATION PRESSURES	For all loads, including full rated load, 6 passengers plus 200 lb. trunk load (1100 lb. total)	Front 24 p.s.i. Rear 20 p.s.i.	
OPTIONAL INFLATION PRESSURES	For reduced loads, 1 to 5 passengers (750 lb. total)	Front 24 p.s.i. Rear 17 p.s.i.	
Fleetwood Seventy-Five 		TIRE SIZE DESIGNATION 8.20-15 (Load Range D) L78-15 (Load Range D)	
STANDARD INFLATION PRESSURES	For all loads, including full rated load, 9 passengers plus 200 lb. trunk load (1550 lb. total)	Front 28 p.s.i. Rear 36 p.s.i.	Front 28 p.s.i. Rear 36 p.s.i.
OPTIONAL INFLATION PRESSURES	For reduced loads, 1 to 5 passengers (750 lb. total)	Front 28 p.s.i. Rear 28 p.s.i.	Front 28 p.s.i. Rear 28 p.s.i.

- For continuous high speed operation (75 to 90 mph) increase tire inflation pressure 4 pounds per square inch over the recommended pressures up to a maximum of 32 pounds per square inch-cold for Load Range B tires or 40 pounds per square inch-cold for Load Range D tires.
- Cold tire inflation pressure: after vehicle has been inoperative for 3 hours or more, or driven less than 1 mile. Hot tire inflation pressure: after vehicle has been driven 10 miles or more at 60-70 mph. Tire inflation pressure may increase as much as 6 pounds per square inch when tires are hot and should not be reduced.
- Vehicles with luggage racks do not have a vehicle load limit greater than specified in the tire inflation pressure table.
- When towing trailers, the allowable passenger and cargo load must be reduced by an amount equal to the trailer tongue load on the trailer hitch.
- Full rated load for vehicles having bucket seat option: 5 passengers plus 200 lb. trunk load (950 lb. total).

79

Tire inflation pressure—The tire inflation pressures listed in the table on page 79 have been selected to provide you with the best tire life and riding comfort over the full range of normal driving conditions.

The use of improper tire inflation pressures can cause a serious reduction in tire life. Inflation pressures should be checked at least once a month (and preferably more often) to insure that the right amount of air is contained in the tires. Too little air pressure allows abnormal deflection of the tire causing excessive operating temperatures, while too much air pressure prevents normal deflection, making the car body more vulnerable to road impacts.

Use of optional inflations is allowable only with a reduced load (one to five passengers). When operating at loads greater than the optional reduced load, the inflation pressure must be increased to the standard inflation for full rated loads.

APPEARANCE MAINTENANCE

Your Cadillac is finished with General Motors "Magic-Mirror" acrylic lacquer. This is a finish of maximum beauty which is superior to conventional lacquer finishes in depth of color, gloss retention and durability.

Washing—The best way to preserve the finish is to keep it clean. Frequent washings are required to maintain its original beauty. Wash the car with either warm or cold (never hot) water, not in the direct rays of the sun, and not while the sheet metal surfaces are hot. Never wipe dirt from dry painted surfaces as this may scratch the finish. The use of strong soaps and chemical detergents should be avoided. All cleaning agents should be promptly flushed from the surface and not allowed to dry or they may streak the finish.

Polishing and waxing—Even though the acrylic paint on your car is more durable than conventional finishes, under certain conditions you may wish to wax or polish your car to provide maximum protection.

Calcium chloride and other salts, ice-melting agents, road oil and tar, tree sap, chemicals from factory chimneys and other foreign matter may damage any automobile finish if allowed to remain in contact with paint.

Prompt washing may not thoroughly remove these deposits and, particularly in geographical areas where these exposure conditions are severe, properly applied high quality polishes and waxes will provide the best protection. Authorized Cad-

illac Dealers offer GM Magic Mirror, Blue Coral and GM Body Polish and Cleaner, which have proven their value in maintaining a fine finish.

NOTE: Some chemical cleaners used for removing road oil and tars from painted surfaces have been found to be detrimental to acrylic finishes. When purchasing a cleaner, make sure the instructions specifically state that the contents can be safely used on an acrylic finish. GM Tar and Road Oil Remover is recommended for this purpose.

Chrome—Many parts of your Cadillac, such as the bumpers and body hardware, are chromium plated. Chrome plating is susceptible to the actions of solutions being used on streets and highways to melt ice. Corrosive damage may also be caused by salt air near coastlines, industrial smoke and other conditions found in urban areas. When such conditions exist, frequent washing and waxing are necessary. GM Chrome Cleaner is an excellent material for cleaning the chrome on your car.

Anodized aluminum parts—Caustic cleaning agents will discolor anodized aluminum parts such as the grille and exterior trim. Do not permit the use of steam or cleaning solutions containing these agents for the cleaning of your car.

Glass—Dirt and insects can be removed from glass with clear water. Never wipe dirty glass with dry paper or cloth. Do not operate windshield wipers when glass is dry. Periodic inspection and replacement of wiper blades will reduce the possibility of glass becoming scratched and assure clear vision under adverse driving conditions.

Leather and vinyl—Cadillac upholstery leathers are made from select hides and are protected by a special finish. They can be kept clean normally by regular dusting. Leather or vinyl that has become soiled can be cleaned with GM Multi-Purpose Powdered Cleaner or thick, sudsy lather made from mild soap in lukewarm water. Avoid the use of excessive amounts of water. Remove the suds with a clean, damp cloth and wipe dry. If a sheen is desired, buff with clean cheesecloth. A high quality, glycerine base saddle soap can be used, if desired.

To remove stains such as food, pet accidents and ink, clean as previously explained. For acids and perspiration stains, use cloth dipped in solution of one teaspoon of baking soda to one cup of water, and follow with the soap and water treatment. In the event of blood stains, wipe off with cold water before using soap and water.

Do NOT use naphtha, alcohol cleaners, household cleansing and bleaching agents, wax, polish, or oils.

White sidewall tires—GM White Sidewall Tire Cleaner is recommended. Foaming type household cleansers may also be used. Do NOT use gasoline, kerosene, or any oil product that will discolor the tire sidewalls or damage the rubber.

Upholstery and carpets—Dirt and dust in the upholstery and carpets can be removed with frequent vacuuming. GM Kar Kleen and GM Multi-Purpose Powdered Cleaner are especially recommended for cleaning carpets and upholstery, and restoring them to like-new condition. GM Fabric Cleaner can be used on spots that are difficult to remove.

CAUTION: When cleaning interior fabrics or carpeting, do not use volatile cleaning solvents such as: acetone, lacquer thinners, enamel reducers, nail polish removers, or laundry soaps, bleaches and reducing agents.

NEVER USE GASOLINE, NAPHTHA OR CARBON TETRACHLORIDE FOR ANY CLEANING PURPOSE.

Vinyl covered roof—To wash the vinyl covered roof, use lukewarm water and suds from a neutral soap. A cloth or soft-bristled brush is recommended for applying the solution of suds. Deeply embedded dirt can be removed with a nylon bristled brush and a small amount of foaming type cleanser. All traces of the cleanser should be removed with clean water. Do NOT use volatile cleaners, naphtha, gasoline, harsh household cleaners and detergents, soaps, and bleaching agents. A wire brush will seriously damage the vinyl roof material, and should not be used.

SPECIAL NOTES

Undercoating — Undercoating should not be applied to any moving or rotating part. It should be kept off air conditioner fittings, body drain-holes, exhaust system, and propeller shaft. On cars equipped with Automatic Level Control, particular care should be taken not to undercoat any fittings, lines, or system components.

Extended vehicle storage—If you plan to store your Cadillac over an extended period of time, certain steps should be taken to give it maximum protection. It is recommended that you write to the Cadillac Motor Car Division, Service Department, Detroit, Michigan 48232 for detailed instructions

on how to prepare your Cadillac for storage.

Lights—When the headlights are on high beam, a light below the 60 MPH mark on the speedometer glows red. Never leave the high beam on when driving behind another car or approaching oncoming traffic. Have all your lights checked regularly. Your Authorized Cadillac Dealer has the modern equipment and genuine Cadillac parts to handle these services promptly.

EXHAUST GAS WARNING (Carbon Monoxide)
Avoid inhaling exhaust gases because they contain carbon monoxide, which is a potentially lethal gas that by itself is colorless and odorless.

SITTING IN A PARKED CAR WITH ENGINE RUNNING FOR AN EXTENDED PERIOD IS NOT RECOMMENDED.

Do not run engine in confined areas such as garages any more than needed to move vehicle in or out of area. When vehicle is stopped in an unconfined area with the engine running for any more than a short period, the following precaution should be observed:

- Adjust heating system to force outside air into car with blower set at medium or high speed, and controls set in any position except "OFF". On cars equipped with air

conditioning, set the control lever at "AUTO".

The trunk lid should be closed while driving to prevent drawing exhaust gases into the car. However, if for some reason the trunk must remain open while moving, the following precautions should be observed:

- Close all windows.
- Adjust heating system to force outside air into car with blower set at high speed, and controls set in any position except "OFF". On cars equipped with air conditioning, set the control lever at "AUTO".
- On cars equipped with outside air vents (in) (or) (under) instrument panel, open vents fully.

The best protection against carbon monoxide entry into the car body is a properly maintained engine exhaust system. Whenever a change is noticed in the sound of the exhaust system, when exhaust fumes can be detected inside the vehicle, or when the underside of the vehicle is damaged, have a competent mechanic inspect the complete exhaust system and adjacent body areas for broken, damaged or mispositioned parts, deterioration, open seams or loose connections which could permit exhaust fumes to seep into the trunk

or passenger compartment. In addition, inspect the exhaust system each time the vehicle is raised for lubrication or oil change. Replace or adjust as required.

Controlled differential—On cars equipped with a Controlled Differential, never run the engine with one drive wheel off the ground, since the car may drive through the wheel remaining on the ground.

CAUTION: Care should be taken to avoid sudden acceleration when both drive wheels of any vehicle are on a slippery surface. This could cause both drive wheels to spin, especially when car is equipped with a Controlled Differential, and allow the vehicle to slide sideways on the curved surface of a road or in a turn.

SPECIFICATIONS

Vehicle identification number—The Vehicle Identification Number is used in license and insurance applications and in general reference to the automobile. For the owner's convenience this number is located on top of the instrument panel at the lower left hand corner of the windshield, where it is visible from outside the car.

FLUID CAPACITIES

NOTE: Fuel tank capacity on cars shipped to the State of California is approximately two gallons less than specified below.

Fuel Tank—approximately 26 U.S. gallons (21¼ Imperial gallons).

Eldorado—Approximately 24 U.S. gallons (20 Imperial gallons).

Commercial Chassis—Approximately 20 U.S. gallons (16¼ Imperial gallons).

Turbo Hydramatic transmission with filter change—4 U.S. quarts (3¼ Imperial quarts) except Eldorado—5 U.S. quarts (4¼ Imperial quarts).

Engine oil—all cars except Eldorado—4 U.S. quarts (3¼ Imperial quarts)—with filter change, 5 U.S. quarts (4¼ Imperial quarts).

Engine oil—Eldorado only—5 U.S. quarts (4¼ Imperial quarts)—with filter change, 6 U.S. quarts (5 Imperial quarts).

Rear Axle—5 U.S. pints (4¼ Imperial pints). Final Drive, Eldorado—4½ U.S. pints (3¾ Imperial pints).

Cooling System—See page 72.

ENGINE SPECIFICATIONS (except Eldorado)

Type of engine..... 90°, V-8 overhead valve

Bore and stroke..... 4.300 in. x 4.060 in.
Piston displacement..... 472 cu. in.
Horsepower..... 375 at 4400 rpm
Torque..... 525 ft. lbs. at 3000 rpm

ENGINE SPECIFICATIONS (Eldorado)

Type of engine..... 90°, V-8 overhead valve
Bore and stroke..... 4.300 in. x 4.304 in.
Piston displacement..... 500 cu. in.
Horsepower..... 400 at 4400 rpm
Torque..... 550 ft. lbs. at 3000 rpm

TUNE-UP SPECIFICATIONS

Engine Belt Tensions:

New Belts..... 100 ft. lbs.

Used Belts..... 55-70 ft. lbs.

*All series Cadillacs are built and numbered in numerical order beginning with V. I. Number 100001, regardless of series or style.

WEIGHT—Consult the dealer who sold you the car or the Motor Vehicle Commissioner of your state. Weight information on all body styles is regularly supplied to these authorities.

FUSES AND BULBS

All fuses and circuit breakers are contained in a fuse panel located behind the center of the instrument panel, except the fuse for the seat-back lock and the circuit breakers for the headlights and Twilight Sentinel.

The headlamp circuits are protected by a circuit breaker in the light switch. An overload on the breaker will cause the lamps to "flicker" on and off. If this condition develops, have your headlamp wiring checked immediately.

Specifications and locations of fuses, circuit breakers, and bulbs are listed on pages 86 and 87. Replacement parts must be of the same type and capacity characteristics as those listed.

DO NOT use fuses of higher amperage rating than those recommended in the fuse chart on page 86.

Turn signal and hazard warning flashers—

The turn signal flasher unit and the flasher unit for the Hazard Warning System are located on the underside of the steering column lower cover.

1. Back-Up Lights, Turn Signal, Cruise Control, De-Fogger

EXTERIOR ACRYLIC PAINT COLOR CHART

Refer to body name plate on cowl of car for Paint Color No. and Roof Top Code. The two digit number on the name plate indicates exterior paint color, and the single letter, if any, indicates color of roof top cover. For example, "11K" indicates exterior paint color white with black roof top covering, whereas "11" indicates paint color white on entire car exterior.

Use Stock No. shown in this chart to order paint from local paint suppliers..

Power brake make & type (remote, int., etc.)	Std.	Delco Tandem			
	Opt.	--			
Effective area (sq. in.) *	38.36	F	80	R	
Gross lining area (sq. in.) **	42.28	F	84	R	
Swept area (sq. in.) ***	2.24	F	138	R	
Front to Rear Effectiveness Relationship		62 - 69%			
Drum	Diameter (nominal)	Front	--		
		Rear	11.0		
	Type and material	Full Cast Iron Finned Drum			
Rotor	Outer working diameter	11.0			
	Inner working diameter	6.91			
	Working width	1.205			
	Material & type (vented/solid)	Full Cast Iron - Vented			
Wheel cylinder bore	Front	2 15/16			
	Rear	7/8			
Master Cylinder	Bore	1.125			
	displacement	Front	73.6%		
	distribution	Rear	26.4%		
Pedal arc ratio		3.28:1			
Line pressure at 100 lb. pedal load		1350 PSI Disc			
Shoe Clearance	Front	None			
	Rear	.015			
Brake lining	Bonded or riveted		Riveted		
	Front Wheel	Material	DM 5470 Molded Asbestos		
		Size (length x width x thickness)	Prim. or out-board	5.4 X 1.93 X .41	
			Second. or in-board	--	
		Second. or in-board	5.34 X 1.93 X .43		
		Segments per shoe	--		
Rear Wheel	Material	Marshall H 3144 PRI and H3152 F Sec. Molded Asb.			
	Size (length x width x thickness)	Prim. or out-board	9.00 X 2.00 X .20		
		Second. or in-board	12.00 X 2.00 X .20		
	Segments per shoe	1			

* Excludes rivet holes, grooves, chamfers, etc. ** Includes rivet holes, grooves, chamfers, etc.

*** Total swept area for four brakes. (Widest lining contact width for each brake x its contact circumference.)

MAKE OF CAR Cadillac MODEL YEAR 1970 DATE ISSUED 9-18-69 REVISED (*)

MODEL 69347 Eldorado

SUSPENSION – GENERAL

(See Supplement page for details on Air Suspension)

Provision for car leveling		Front - Torsion Bar Adj. - Auto Level Control
Provision for brake dip control		In Frt. and Rear Suspension Geometries
Provision for acc. squat control		In Front Suspension Geometry
Special provisions for car jacking		Bumper Type
Shock absorber front & rear	Type	Direct Action
	Make	Delco
	Piston dia.	1"
Other special features		Placell Air Reservoir, Rebound Cut Off, Intregal Bump Stop in Front Shocks

SUSPENSION – FRONT

Type and description		Independent Torsion Bar
Spring	Type	Torsion Bar
	Material	S.A.E. 5160 H
	Size (coil design height & I.D. bar length x dia.)	1.062 Dia. X 54.71 Long Eff. Length
	Spring rate (lb. per in.)	438 In. Lb/Deg.
	Rate at wheel (lb. per in.)	115
Stabilizer	Type (link, linkless, frameless)	Link
	Material & bar diameter	S.A.E. 1070 1 1/16 Dia.

SUSPENSION – REAR

Type and description		Longitudinal Single Leaf Spring - Dead Axle
Drive and torque taken through		Frnt. Wheel Drive
Spring	Type	Single Leaf
	Material	SAE 5160 Steel
	Size (length x width, coil design height & I.D.; bar length & dia.)	3" Dia. X 63.25
	Spring rate (lb. per in.)	95 Lbs/In.
	Rate at wheel (lb. per in.)	115 Lbs./In.
	Mounting insulation type	Rubber bushing shackles and rubber insulator
	if leaf	No. of leaves Shackle(comp. or tens.)
Stabilizer	Type (link, linkless, frameless)	None
	Material	None
Track bar type		None

1970 OPTIONAL EQUIPMENT NET WEIGHT INCREASE

<u>DESCRIPTION</u>	<u>FRONT</u>	<u>REAR</u>	<u>TOTAL</u>
Power Door Locks - Sedan	4.9	5.7	10.6
Power Door Locks - Coupes (Calais & DeVille)	4.5	4.3	8.8

CAR AND BODY DIMENSIONS

KEY SHEET

EXTERIOR CAR AND BODY DIMENSIONS

INTERIOR CAR AND BODY DIMENSIONS

CAR AND BODY DIMENSIONS

KEY SHEET

DIMENSION DEFINITIONS

EXTERIOR WIDTH DIMENSIONS

- W101 WHEEL TREAD - FRONT. Measured at centerline of tires, with nominal camber, at ground.
- W102 WHEEL TREAD - REAR. Measured at centerline of tires at ground.
- W103 MAXIMUM OVERALL CAR WIDTH. Include bumpers, moldings, or sheet metal protrusions. Measured to outside of metal.
- W117 MAXIMUM BODY WIDTH AT #2 PILLAR. Measured across body at #2 pillar, excluding hardware and applied moldings.

EXTERIOR LENGTH DIMENSIONS

- L 30 VERTICAL ZERO LINE TO ACTUAL FRONT OF DASH. If actual Front of Dash is to the rear of Body Zero Line, it is identified by a minus (-) sign.
- L101 WHEELBASE.
- L103 OVERALL LENGTH. Include bumper guards if standard equipment.
- L104 OVERHANG - FRONT. Measured from C/L of front wheels to front of car, including bumper guards if standard equipment.
- L105 OVERHANG - REAR. Measured from C/L of rear wheels to rear of car, including bumper guards if standard equipment.
- L123 BODY UPPER STRUCTURE LENGTH AT CAR CENTERLINE. The horizontal dimension from the Cowl Point to the Deck Point.
- L127 VERTICAL ZERO LINE TO CENTERLINE OF REAR WHEELS. A horizontal dimension.
- L130 VERTICAL ZERO LINE TO WINDSHIELD COWL POINT. The horizontal dimension from the vertical zero line to the theoretical intersection of extended windshield glass plane and normal cowl surface.

EXTERIOR HEIGHT DIMENSIONS

- H101 OVERALL HEIGHT - DESIGN. Measured with the vehicle in Manufacturer's Design Weight attitude.
- H114 COWL POINT TO GROUND. Measured at vehicle centerline.
- H138 DECK POINT TO GROUND. Measured at vehicle centerline.
- H112 ROCKER PANEL TO GROUND - FRONT. The vertical dimension from ground to bottom of rocker panel, excluding flanges. Measured to the outside of sheet metal at foremost point of rocker panel.
- H111 ROCKER PANEL TO GROUND - REAR. The vertical dimension from ground to bottom of rocker panel, excluding flanges. Measured to the outside of sheet metal at front of rear wheel opening.
- H122 WINDSHIELD SLOPE ANGLE. The angle between a vertical line and the windshield surface at car centerline. On compound-curved windshields the chord of the arc is used and limited to that section of the windshield comprehended by an 18-inch chord.

GROUND CLEARANCE DIMENSIONS

- H102 BUMPER TO GROUND - FRONT. Minimum dimension, includes bumper guards.
- H104 BUMPER TO GROUND - REAR. Minimum dimension, includes bumper guards.
- H106 ANGLE OF APPROACH. The angle between ground and a line tangent to the front tire static loaded radius arc and the first point of interference, i.e., bumper, guard, gravel deflector, fender or other component, excluding license plate. This dimension may be determined graphically for reporting purposes.
- H107 ANGLE OF DEPARTURE. The angle between ground and a line tangent to the rear tire static loaded radius arc and the first point of interference, i.e., bumper, guard, gravel deflector, tail pipe, fender or other component, excluding license plate. This dimension may be determined graphically for reporting purposes.
- H147 RAMP BREAKOVER ANGLE. The supplement of included ramp angle (180° minus included ramp angle) over which car can pass without interference; measured with car sitting on a level surface, using lines tangent to arcs of front and rear static loaded radii and intersecting at point on underside of car which defines the smallest angle.
- H156 MINIMUM RUNNING GROUND CLEARANCE. Location of measurement on the car is to be clearly recorded.

FRONT COMPARTMENT DIMENSIONS

- H 61 EFFECTIVE HEAD ROOM - FRONT. The dimension from H Point to the headlining, plus a constant of 4.0 inches, measured along a line 8° to rear of vertical.
- L 34 MAXIMUM EFFECTIVE LEG ROOM - ACCELERATOR. Measured along a diagonal line from the Manikin ankle pivot center to the H Point plus a constant of 10.0 inches. For treadle type accelerator pedals, the leg room is measured with the Manikin's right foot on the accelerator pedal and the Manikin Heel Point at Accelerator Heel Point. All other types of accelerator pedals will be measured with the Manikin foot angle set at 87° and the shoe touching the pedal.
- H 30 H POINT TO HEEL POINT - FRONT. The vertical dimension from the H Point to the Accelerator Heel Point.
- L 17 H POINT TRAVEL. The horizontal dimension between the H Point in the most forward and rearward seat positions.

FRONT COMPARTMENT DIMENSIONS (Cont.)

- W 3 SHOULDER ROOM - FRONT. The minimum lateral dimensions between the door garnish moldings or nearest interference, measured at the H Point station.
- W 5 HIP ROOM - FRONT. The lateral dimension through the H Point to trimmed body surfaces. Depress loose side wall cloth to trim foundation or other obstruction if such construction exists.
- H 50 UPPER BODY OPENING TO GROUND - FRONT. The vertical dimension from a point on the trimmed body opening to the ground, measured at the H Point station.

REAR COMPARTMENT DIMENSIONS

- L 50 H POINT COUPLE DISTANCE. The horizontal dimension from the front seat H Point to the rear seat H Point.
- H 63 EFFECTIVE HEAD ROOM - REAR. The dimension from the H Point to the headlining, plus a constant of 4.0 inches, measured along a line 8° to rear of vertical.
- L 51 MINIMUM EFFECTIVE LEG ROOM - REAR. Measured along a diagonal line from the ankle pivot center to the H Point plus a constant of 10.0 inches, with the foot positioned to the nearest interference between the seat structure and toe, instep or lower leg.
- H 31 H POINT TO HEEL POINT - REAR. The vertical dimension from the H Point to the Manikin Heel Point on the depressed floor covering.
- L 48 MINIMUM KNEE ROOM - REAR. The minimum dimension from the Manikin knee pivot center to the back of the front seat back.
- L 3 REAR COMPARTMENT ROOM. The horizontal dimension from the back of front seat to front of rear seat back at height tangent to the top of rear seat cushion.
- W 4 SHOULDER ROOM - REAR. The minimum lateral dimension between the door garnish molding or nearest interference. Measured at H Point station.
- W 6 HIP ROOM - REAR. The lateral dimension through H Point to trimmed body surfaces. Depress loose side wall cloth to trim foundation or other obstruction when such construction exists.
- H 51 UPPER BODY OPENING TO GROUND - REAR. The vertical dimension from a point on the trimmed body opening to the ground, measured 13.0 inches forward of the H Point.

LUGGAGE COMPARTMENT DIMENSIONS

- V 1 LUGGAGE CAPACITY - USABLE. The total luggage compartment luggage capacity in cubic feet with the tire and tools in place.
- H195 LIFTOVER HEIGHT. Vertical dimension from the highest point on the luggage compartment lower opening to ground, excluding corner radii.

STATION WAGON - THIRD SEAT DIMENSIONS

- W 85 SHOULDER ROOM - THIRD SEAT. The minimum lateral dimension between the door garnish moldings or nearest interference. Measured at H Point station.
- W 86 HIP ROOM - THIRD SEAT. The lateral dimension through H Point to trimmed surfaces.
- L 86 EFFECTIVE LEG ROOM - THIRD SEAT. Measured along a diagonal line from ankle pivot center to H Point plus a constant of 10.0 inches. With rear-facing third seat, foot is positioned in foot well or to nearest interference with rear end or rear closure.
- H 86 EFFECTIVE HEAD ROOM - THIRD SEAT. The dimension from H Point to the headlining, plus a constant of 4.0 inches. Measured along a line 8° to rear of vertical.

STATION WAGON - CARGO SPACE DIMENSIONS

- L202 CARGO LENGTH AT FLOOR - FRONT SEAT. The horizontal dimension, measured at the floor level from the rear of the front seat back to the normal inside limiting interference on the tailgate, on the car centerline.
- L204 CARGO LENGTH AT BELT - FRONT SEAT. The horizontal dimension measured from the top rear of front seat back to a vertical extension line from the normal inside limiting interference at the top of the tailgate, on the car centerline.
- W201 CARGO WIDTH - WHEELHOUSE. The minimum horizontal dimension, measured between wheelhousings at floor level.
- W204 OPENING WIDTH AT BELT. The minimum horizontal dimension, measured between the nearest normal inside limiting interferences of the rear opening at the top of the tailgate.
- H201 MAXIMUM CARGO HEIGHT. The maximum vertical dimension, measured from the top of the floor covering to the headlining, on the car centerline.
- H202 REAR OPENING HEIGHT. The vertical dimension measured from the top of the floor covering to the normal inside limiting interference at the top of the rear opening, on the car centerline, with both tail and liftgates fully open.
- V 2 CARGO VOLUME INDEX BEHIND FRONT SEAT. The total volume in cubic feet above the normal load floor and behind the front seat with the liftgate and tailgate closed.

The information contained herein is prepared, distributed by, and is solely the responsibility of the automobile manufacturing company to whose products it relates. Questions concerning these specifications should be directed to the manufacturer whose address is shown below. This uniform specification form was developed by the automobile manufacturing companies under the auspices of the Automobile Manufacturers Association.

MANUFACTURER CADILLAC MOTOR CAR DIVISION		CAR NAME CADILLAC	
MAILING ADDRESS 2860 Clark		MODEL YEAR 1970	ISSUED: 9-18-69 REVISED (e)

NOTES:

1. The General Specifications herein are those in effect at date of compilation and are subject to change without notice by the manufacturer.
2. UNLESS OTHERWISE INDICATED:
 - a. Specifications apply to standard models without optional equipment. Significant deviations are noted.
 - b. Nominal design dimensions are used throughout these specifications.

MAKE OF CAR Cadillac MODEL YEAR 1970 DATE ISSUED 9-18-69 REVISED (e)

CAR AND BODY DIMENSIONS

See Pages 25, 26 for SAE Dimension Definitions

(All dimensions in inches unless otherwise indicated)

All dimensions to ground are for comparative purposes only. Dimensions are to be shown for:
4-Dr. Sedan, 2-Dr. H.T., 4-Dr. H.T., Convertible and Station Wagon.

MODEL	SAE Ref. No.	ALL
-------	--------------	-----

WIDTH

Track - Front	W101	63.0
Track - Rear	W102	63.0
Maximum overall car width	W103	79.8
Body width at No. 2 pillar	W117	79.3

LENGTH

Body "O" to front of dash	L 30	
Wheelbase	L101	129.5 (680-681 133.0) - (75 - 149.8)
Overall car length	L103	225.0 (680-681 228.5) (75 - 245.3)
Overhang - front	L104	37.5
Overhang - rear	L105	58.0
Body upper structure length	L123	See Below
Body "O" line to ϵ of rear wheel	L127	105.5
Body "O" line to w/s cowl point	L130	7.0

HEIGHT

Passenger Distribution (front & rear)		3 Pass. F - 3 Pass. R
Trunk/Carge load (lbs.)		
Overall height	H101	See Below
Cowl height	H114	38.3 38.8 on 68069 39.6 Limo.
Deck height	H138	
Rocker panel - front	To ground From front wheel ϵ	H112 7.2 (7.8 68069) (8.6 - 7523) (8.5 - 7533)
Rocker panel - rear	To ground From rear wheel ϵ	H111 6.8 (8.1 68069-68169) (9.1 - 7523) (8.9 - 7533)
Windshield slope angle	H122	55°

GROUND CLEARANCE

		680-681	75 Limo.
Bumper to ground - front	H102	10.4 10.5	11.1
Bumper to ground - rear	H104	11.8 10.7	12.9
Angle of approach	H106	18.4° 18.4°	19.6°
Angle of departure	H107	13.5° 12.0°	15.1°
Ramp breakover angle	H147	11.4 10.9	11.6
Min. running clearance (Specify)	H156	5.8 5.4	6.4

	I-123	H - 101
	106.8 — 68069 - 68169	— 56.6

CAR AND BODY DIMENSIONS

KEY SHEET

EXTERIOR CAR AND BODY DIMENSIONS

INTERIOR CAR AND BODY DIMENSIONS

CAR AND BODY DIMENSIONS

KEY SHEET

DIMENSION DEFINITIONS

EXTERIOR WIDTH DIMENSIONS

- W101 WHEEL TREAD - FRONT. Measured at centerline of tires, with nominal camber, at ground.
 W102 WHEEL TREAD - REAR. Measured at centerline of tires at ground.
 W103 MAXIMUM OVERALL CAR WIDTH. Include bumpers, moldings, or sheet metal protrusions. Measured to outside of metal.
 W117 MAXIMUM BODY WIDTH AT #2 PILLAR. Measured across body at #2 pillar, excluding hardware and applied moldings.

EXTERIOR LENGTH DIMENSIONS

- L 30 VERTICAL ZERO LINE TO ACTUAL FRONT OF DASH. If actual Front of Dash is to the rear of Body Zero Line, it is identified by a minus (-) sign.
 L101 WHEELBASE.
 L103 OVERALL LENGTH. Include bumper guards if standard equipment.
 L104 OVERHANG - FRONT. Measured from C/L of front wheels to front of car, including bumper guards if standard equipment.
 L105 OVERHANG - REAR. Measured from C/L of rear wheels to rear of car, including bumper guards if standard equipment.
 L123 BODY UPPER STRUCTURE LENGTH AT CAR CENTERLINE. The horizontal dimension from the Cowl Point to the Deck Point.
 L127 VERTICAL ZERO LINE TO CENTERLINE OF REAR WHEELS. A horizontal dimension.
 L130 VERTICAL ZERO LINE TO WINDSHIELD COWL POINT. The horizontal dimension from the vertical zero line to the theoretical intersection of extended windshield glass plane and normal cowl surface.

EXTERIOR HEIGHT DIMENSIONS

- H101 OVERALL HEIGHT - DESIGN. Measured with the vehicle in Manufacturer's Design Weight attitude.
 H114 COWL POINT TO GROUND. Measured at vehicle centerline.
 H138 DECK POINT TO GROUND. Measured at vehicle centerline.
 H112 ROCKER PANEL TO GROUND - FRONT. The vertical dimension from ground to bottom of rocker panel, excluding flanges. Measured to the outside of sheet metal at foremost point of rocker panel.
 H111 ROCKER PANEL TO GROUND - REAR. The vertical dimension from ground to bottom of rocker panel, excluding flanges. Measured to the outside of sheet metal at front of rear wheel opening.
 H122 WINDSHIELD SLOPE ANGLE. The angle between a vertical line and the windshield surface at car centerline. On compound-curved windshields the chord of the arc is used and limited to that section of the windshield comprehended by an 18-inch chord.

GROUND CLEARANCE DIMENSIONS

- H102 BUMPER TO GROUND - FRONT. Minimum dimension, includes bumper guards.
 H104 BUMPER TO GROUND - REAR. Minimum dimension, includes bumper guards.
 H106 ANGLE OF APPROACH. The angle between ground and a line tangent to the front tire static loaded radius arc and the first point of interference, i.e., bumper, guard, gravel deflector, fender or other component, excluding license plate. This dimension may be determined graphically for reporting purposes.
 H107 ANGLE OF DEPARTURE. The angle between ground and a line tangent to the rear tire static loaded radius arc and the first point of interference, i.e., bumper, guard, gravel deflector, tail pipe, fender or other component, excluding license plate. This dimension may be determined graphically for reporting purposes.
 H147 RAMP BREAKOVER ANGLE. The supplement of included ramp angle (180° minus included ramp angle) over which car can pass without interference; measured with car sitting on a level surface, using lines tangent to arcs of front and rear static loaded radii and intersecting at point on underside of car which defines the smallest angle.
 H156 MINIMUM RUNNING GROUND CLEARANCE. Location of measurement on the car is to be clearly recorded.

FRONT COMPARTMENT DIMENSIONS

- H 61 EFFECTIVE HEAD ROOM - FRONT. The dimension from H Point to the headlining, plus a constant of 4.0 inches, measured along a line 8" to rear of vertical.
 L 34 MAXIMUM EFFECTIVE LEG ROOM - ACCELERATOR. Measured along a diagonal line from the Manikin ankle pivot center to the H Point plus a constant of 10.0 inches. For treadle type accelerator pedals, the leg room is measured with the Manikin's right foot on the accelerator pedal and the Manikin Heel Point at Accelerator Heel Point. All other types of accelerator pedals will be measured with the Manikin foot angle set at 87° and the shoe touching the pedal.
 H 30 H POINT TO HEEL POINT - FRONT. The vertical dimension from the H Point to the Accelerator Heel Point.
 L 17 H POINT TRAVEL. The horizontal dimension between the H Point in the most forward and rearward seat positions.

FRONT COMPARTMENT DIMENSIONS (Cont.)

- W 3 SHOULDER ROOM - FRONT. The minimum lateral dimensions between the door garnish moldings or nearest interference, measured at the H Point station.
 W 5 HIP ROOM - FRONT. The lateral dimension through the H Point to trimmed body surfaces. Depress loose side wall cloth to trim foundation or other obstruction if such construction exists.
 H 50 UPPER BODY OPENING TO GROUND - FRONT. The vertical dimension from a point on the trimmed body opening to the ground, measured at the H Point station.

REAR COMPARTMENT DIMENSIONS

- L 50 H POINT COUPLE DISTANCE. The horizontal dimension from the front seat H Point to the rear seat H Point.
 H 63 EFFECTIVE HEAD ROOM - REAR. The dimension from the H Point to the headlining, plus a constant of 4.0 inches, measured along a line 8" to rear of vertical.
 L 51 MINIMUM EFFECTIVE LEG ROOM - REAR. Measured along a diagonal line from the ankle pivot center to the H Point plus a constant of 10.0 inches, with the foot positioned to the nearest interference between the seat structure and toe, instep or lower leg.
 H 31 H POINT TO HEEL POINT - REAR. The vertical dimension from the H Point to the Manikin Heel Point on the depressed floor covering.
 L 48 MINIMUM KNEE ROOM - REAR. The minimum dimension from the Manikin knee pivot center to the back of the front seat back.
 L 3 REAR COMPARTMENT ROOM. The horizontal dimension from the back of front seat to front of rear seat back at height tangent to the top of rear seat cushion.
 W 4 SHOULDER ROOM - REAR. The minimum lateral dimension between the door garnish molding or nearest interference. Measured at H Point station.
 W 6 HIP ROOM - REAR. The lateral dimension through H Point to trimmed body surfaces. Depress loose side wall cloth to trim foundation or other obstruction when such construction exists.
 H 51 UPPER BODY OPENING TO GROUND - REAR. The vertical dimension from a point on the trimmed body opening to the ground, measured 13.0 inches forward of the H Point.

LUGGAGE COMPARTMENT DIMENSIONS

- V 1 LUGGAGE CAPACITY - USABLE. The total luggage compartment luggage capacity in cubic feet with the tire and tools in place.
 H195 LIFTOVER HEIGHT. Vertical dimension from the highest point on the luggage compartment lower opening to ground, excluding corner radii.

STATION WAGON - THIRD SEAT DIMENSIONS

- W 85 SHOULDER ROOM - THIRD SEAT. The minimum lateral dimension between the door garnish moldings or nearest interference. Measured at H Point station.
 W 86 HIP ROOM - THIRD SEAT. The lateral dimension through H Point to trimmed surfaces.
 L 86 EFFECTIVE LEG ROOM - THIRD SEAT. Measured along a diagonal line from ankle pivot center to H Point plus a constant of 10.0 inches. With rear-facing third seat, foot is positioned in foot well or to nearest interference with rear end or rear closure.
 H 86 EFFECTIVE HEAD ROOM - THIRD SEAT. The dimension from H Point to the headlining, plus a constant of 4.0 inches. Measured along a line 8" to rear of vertical.

STATION WAGON - CARGO SPACE DIMENSIONS

- L202 CARGO LENGTH AT FLOOR - FRONT SEAT. The horizontal dimension, measured at the floor level from the rear of the front seat back to the normal inside limiting interference on the tailgate, on the car centerline.
 L204 CARGO LENGTH AT BELT - FRONT SEAT. The horizontal dimension measured from the top rear of front seat back to a vertical extension line from the normal inside limiting interference at the top of the tailgate, on the car centerline.
 W201 CARGO WIDTH - WHEELHOUSE. The minimum horizontal dimension, measured between wheel housings at floor level.
 W204 OPENING WIDTH AT BELT. The minimum horizontal dimension, measured between the nearest normal inside limiting interferences of the rear opening at the top of the tailgate.
 H201 MAXIMUM CARGO HEIGHT. The maximum vertical dimension, measured from the top of the floor covering to the headlining, on the car centerline.
 H202 REAR OPENING HEIGHT. The vertical dimension measured from the top of the floor covering to the normal inside limiting interference at the top of the rear opening, on the car centerline, with both tail-and liftgates fully open.
 V 2 CARGO VOLUME INDEX BEHIND FRONT SEAT. The total volume in cubic feet above the normal load floor and behind the front seat with the liftgate and tailgate closed.

W4xL204xH201
